## AZ-120 Valid Dumps Ppt - Exam AZ-120 Preparation

AZ-120 practice software creates an atmosphere just like a real Microsoft exam thus developing your confidence and leaving no space for any surprises that make you anxious on the day of the exam. Moreover, the software is developed by Dumps4PDF in a way that is simple to use and helps you perform better at the Planning and Administering Microsoft Azure for SAP Workloads exam. But in case you face any problem in accessing the Microsoft AZ-120 exam questions while preparing for the Planning and Administering Microsoft Azure for SAP Workloads exam, there is a product support team at Dumps4PDF to help you with it. You get guaranteed money back – if despite proper preparation using the Microsoft AZ-120 by Dumps4PDF you are unable to pass the exam. Grab the opportunity to learn, pass the Planning and Administering Microsoft Azure for SAP Workloads exam, and grow your career. By taking Microsoft certification you can even improve your potential earning power and build a better professional network.

# How to Prepare For AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Exam

## Preparation Guide for AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Exam

### Introduction

Microsoft has created a track for Azure professionals who are knowledgeable in SAP landscape to get certified this platform. This certification program provides Microsoft Azure for SAP Workloads professionals a way to demonstrate their skills. The assessment is based on a rigorous exam using industry standard methodology to determine whether a candidate meets Microsoft's proficiency standards.

According to Microsoft, a Microsoft Certified Professional enables organizations to leverage Microsoft Azure for SAP Workloads technologies with a thorough understanding of generating existing SAP inventories, designing migration strategies, designing Azure infrastructure services, HA models supported in HANA .

Certification is evidence of your skills, expertise in those areas in which you like to work. If candidate wants to work on Microsoft Azure for SAP Workloads and prove his knowledge, certification offered by Microsoft. This **AZ-120 Exam** Certification helps a candidate to validate his skills in Microsoft Azure for SAP Workloads Technology.

In this guide, we will cover the AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Certification exam, AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Certified professional salary and all aspects of the AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Certification.

Microsoft AZ-120 Exam is an excellent opportunity for IT professionals to expand their knowledge and skills in Azure and SAP. It is a challenging exam that requires a significant amount of preparation, but it is well worth the effort. Passing AZ-120 exam will give you a competitive edge in the job market and open up new career opportunities.

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q228-Q233):

### NEW QUESTION # 228

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: No

Box 2: Yes

The minimum SAP HANA certified conditions for the different storage types are:

Azure Premium SSD - /hana/log is required to be cached with Azure Write Accelerator. The /hana/data volume could be placed on Premium SSD without Azure Write Accelerator or on Ultra disk Box 3: Yes References:

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/hana-vm-operations-storage>

### NEW QUESTION # 229

You deploy SAP HANA by using SAP HANA on Azure (Large Instances).

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: No

Box 2: Yes

The SAP Azure Enhanced Monitoring Extension allows for collecting diagnostic data including OS and Application performance counters from Azure VMs running SAP workloads.

Box 3: No

Topic 1, Litware, inc

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all question include on this exam in the time provided.

To answer the question included in a case study, you will need to reference information that is provided in the case study. Case studies might contain and other resources that provide information about the scenario that is describe in the case study. Each question is independent of the other question in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To Start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such the content requirements, existing environment, and problem statements, if the case study has an All Information tab, note that the information displayed its identical to the information displayed on the subsequence tabs. When you are ready to answer a question click the Question button to return to the question.

Overview

Litware, inc. is an international manufacturing company that has 3,000 employees.

Litware has two main offices. The offices are located in Miami, FL, and Madrid Spain.

Existing Environment

Infrastructure

Litware currently uses a third-party provider to host a datacenter in Miami and a disaster recovery datacenter in Chicago, it. The network contains an Active Directory domain named litware.com. Litware has two third-party applications hosted in Azure. Litware already implemented a site-to-site VPN connection between the on-premises network and Azure.

SAP Environment

Litware currently runs the following SAP products:

- \* Enhancement Pack 6 for SAP ERP Central Component 6.0 (SAP ECC 6.0)
- \* SAP Extended Warehouse Management (SAP EWM)
- \* SAP Business Warehouse (SAP BW)
- \* SAP NetWeaver Process Integration (PI)
- \* SAP Solution Manager

All users run on the Windows Server platform. All databases use Microsoft SQL Server. Currently, you have 20 production servers.

You have 30 non-production servers including five testing servers, five development servers, five quality assurance (QA) servers, and 15 pre-production servers.

Currently, all SAP applications are in the litware.com domain.

Problem Statements

The current version of SAP ECC has a transaction that, when run in batches overnight, takes eight hours to complete. You confirm that upgrading to SAP Business Suite on HANA will improve performance because of code changes and the SAP HANA database platform.

Litware is dissatisfied with the performance of its current hosted infrastructure vendor. Litware experienced several hardware failures and the vendor struggled to adequately support its 24/7 business operation.

Business Goals

Litware identifies the following business goals:

- \* Increase the performance of SAP ECC application by moving to SAP HANA. All other databases will remain on SQL Server.
- \* Move away from the current infrastructure vendor to increase the stability and availability of the SAP services.
- \* Use the new Environment, Health and Safety (EH&S) in Recipe Management function.
- \* Ensure that any migration activities can be completed within a 48-hour period during a weekend.

Planned Changes

Litware identifies the following planned changes:

- \* Migrate SAP to Azure.
- \* Upgrade and migrate SAP ECC to SAP Business Suite on HANA Enhancement Pack 8.

Technical Requirements

Litware identifies the following technical requirements:

- \* Implement automated backups.
- \* Support load testing during the migration.
- \* Identify opportunities to reduce costs during the migration.
- \* Continue to use the Litware.com domain for all SAP landscapes.
- \* Ensure that all SAP applications and databases are highly available.

- \* Remove all SAP components from the on-premises network once the migrate is complete.
- \* Minimize the purchase of additional SAP licenses. SAP HANA license were already purchased.
- \* Ensure that SAP can provide technical support for all the SAP landscapes deployed to Azure.

### NEW QUESTION # 230

You have an SAP environment on Azure.

You use Azure Recovery Services to back up an SAP application server.

You need to test the restoration process of a file on the server.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

#### Answer:

Explanation:

- 1 - From Azure Recover Vault, select File Recovery
- 2 - Download and run the mount disk executable
- 3 - recover the file and unmount the disk

### NEW QUESTION # 231

Your on-premises network contains SAP and non-SAP applications.

You have JAVA-based SAP systems that use SPNEGO for single-sign on (SSO) authentication.

Your external portal uses multi-factor authentication (MFA) to authenticate users.

You plan to extend the on-premises authentication features to Azure and to migrate the SAP applications to Azure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

- Explanation
- Box 1: Yes
- Box 2: Yes

Password hash synchronization is one of the sign-in methods used to accomplish hybrid identity. Azure AD Connect synchronizes a hash, of the hash, of a users password from an on-premises Active Directory instance to a cloud-based Azure AD instance.

Password hash synchronization is an extension to the directory synchronization feature implemented by Azure AD Connect sync.

You can use this feature to sign in to Azure AD services like Office 365. You sign in to the service by using the same password you use to sign in to your on-premises Active Directory instance.

Box 3: Yes

If your organization is federated with Azure AD, you can use Azure Multi-Factor Authentication to secure AD FS resources, both on-premises and in the cloud. Azure MFA enables you to eliminate passwords and provide a more secure way to authenticate.

### NEW QUESTION # 232

What should you use to perform load testing as part of the migration plan?

- A. Azure Monitor
- B. Azure Application Insights
- C. SAP LoadRunner by Micro Focus
- D. JMeter

#### Answer: C

Explanation:

Explanation

### Explanation:

Scenario: Upgrade and migrate SAP ECC to SAP Business Suite on HANA Enhancement Pack 8.

With the SAP LoadRunner application by Micro Focus, you can accelerate testing and development, reduce slowdowns and expenses, and gain a better understanding of performance issues. Validate software performance, virtualize your network, simulate workloads, benchmark production system performance, and optimize your deployment of SAP HANA software.
