ISC CISSP Test Dates | Original CISSP Questions

CISSP Official ISC2 practice tests (All domains) questions with correct answers

1. What is the final step of a quantitative risk analysis?

A. Determine asset value.

B. Assess the annualized rate of occurrence.

C. Derive the annualized loss expectancy.

D. Conduct a cost.benefit analysis. Correct Answer-D.

The final step of a quantitative risk analysis is conducting a cost/benefit analysis to determine whether the organisation should implement proposed countermeasure(s).

2. An evil twin attack that broadcasts a legitimate SSID for an unauthorised network is an example of what category of threat?

A. Spoofing

B. Information disclosure

C. Repudiation

D. Tampering Correct Answer-A.

Spoofing attacks use falsified identities. Spoofing attacks may use false IP addresses, email addresses, names, or, in the case of an evil twin attack, SSIDs.

3. Under the Digital Millennium Copyright Act (DMCA), what type of offenses do not require prompt action by an Internet service provider after it receives a notification of

infringement claim from a copyright holder?

A. Storage of information by a customer on a provider's server

With the help of performance reports of Certified Information Systems Security Professional (CISSP) (CISSP) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and ISC CISSP Questions numbers in your practice tests. Questions of this Certified Information Systems Security Professional (CISSP) (CISSP) mock test closely resemble the format of the actual test.

The CISSP Exam is offered by the International Information System Security Certification Consortium (ISC) and is designed for professionals who have at least five years of experience in the information security field. Certified Information Systems Security Professional (CISSP) certification is highly valued by employers as it demonstrates an individual's knowledge and expertise in information security. In addition, it provides a competitive edge to professionals seeking career advancement in this field.

Updated and Error-free ActualCollection ISC CISSP Exam Questions

Our CISSP questions pdf is up to date, and we provide user-friendly CISSP practice test software for the Certified Information Systems Security Professional (CISSP) exam. Moreover, we are also providing money back guarantee on all of Certified Information Systems Security Professional (CISSP) test products. If the CISSP braindumps products fail to deliver as promised, then you can get your money back. The CISSP Sample Questions include all the files you need to prepare for the ISC CISSP exam.

With the help of the CISSP practice exam questions and test software, you will be able to feel the real CISSP exam scenario, and it will allow you to assess your skills.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1662-Q1667):

NEW QUESTION # 1662
For the purpose of classification, which of the following is used to divide trust domain and trust boundaries?

- A. Integrity
- B. Network architecture
- C. Confidentiality management
- D. Identity Management (IdM)

Answer: B

Explanation:
Network architecture is the factor that is used to divide trust domain and trust boundaries for the purpose of classification.
A trust domain is a logical grouping of systems or networks that share a common security policy and trust level.
A trust boundary is the border or the interface between two trust domains that have different security policies or trust levels.
For the purpose of classification, trust domains and trust boundaries are used to define the scope and the level of protection for the information that is transmitted or stored within or across the domains.
Network architecture is the factor that determines how the trust domains and trust boundaries are established and maintained, as it defines the physical and logical layout, the connectivity, the topology, the devices, and the protocols of the network.
Network architecture can affect the security and the performance of the network, and influence the design and the implementation of the security controls and the encryption mechanisms for the information that flows through the network.

NEW QUESTION # 1663
Which one of the following is NOT one of the maturity levels of the
Software Capability Maturity Model (CMM)?

- A. Managed
- B. Fundamental
- C. Defined
- D. Repeatable

Answer: B

Explanation:
The correct answer is Fundamental, a distracter. The first level of the Software
CMM is the Initiating level. At this level, processes are performed on
an ad hoc basis.
Answer the Repeatable level is the second maturity
level in the model. In the third level, Defined, management
practices are institutionalized and technical procedures are
integrated into the organizational structurE. The Managed level
has both product and processes quantitatively controlled.
The fifth level of the Software CMM is the Optimized level, where
continuous process improvement is institutionalized.

NEW QUESTION # 1664
ICMP and IGMP belong to which layer of the OSI model?

- A. Data Link Layer.
- B. Network Layer.
- C. Transport Layer.
- D. Datagram Layer.

Answer: B

Explanation:
Explanation/Reference:
Explanation:
ICMP and IGMP work at the network layer of the OSI model.
Incorrect Answers:
A: There is no Datagram Layer in the OSI model.
C: ICMP and IGMP do not belong to the Transport layer of the OSI model. TCP and UDP are examples of protocols working at the transport layer.
D: ICMP and IGMP do not belong to the Transport layer of the OSI model. ARP, OSOF, and MAC are examples of protocols workings at the data link layer.

NEW QUESTION # 1665
Who has the final responsibility for the preservation of the organization's information?

- A. Application owners
- B. Users
- C. Senior management
- D. Technology providers

Answer: C

Explanation:
Various officials and organizational offices are typically involved with computer security. They include the following groups: Senior management Program/functional managers/application owners Computer security management Technology providers Supporting organizations Users Senior management has the final responsibility through due care and due diligence to preserve the capital of the organization and further its business model through the implementation of a security program. While senior management does not have the functional role of managing security procedures, it has the ultimate responsibility to see that business continuity is preserved.

NEW QUESTION # 1666
A host-based IDS is resident on which of the following?

- A. decentralized hosts
- B. central hosts
- C. On each of the critical hosts
- D. bastion hosts

Answer: C

Explanation:
A host-based IDS is resident on a host and reviews the system and event logs in order to detect an attack on the host and to determine if the attack was successful.
All critical serves should have a Host Based Intrusion Detection System (HIDS) installed.
As you are well aware, network based IDS cannot make sense or detect pattern of attacks within encrypted traffic. A HIDS might be able to detect such attack after the traffic has been decrypted on the host. This is why critical servers should have both NIDS and HIDS.
FROM WIKIPEDIA:
A HIDS will monitor all or part of the dynamic behavior and of the state of a computer system. Much as a NIDS will dynamically inspect network packets, a HIDS might detect which program accesses what resources and assure that (say) a word-processor hasn\'t suddenly and inexplicably started modifying the system password-database. Similarly a
HIDS might look at the state of a system, its stored information, whether in RAM, in the file- system, or elsewhere; and check that the contents of these appear as expected.
One can think of a HIDS as an agent that monitors whether anything/anyone - internal or external - has circumvented the security policy that the operating system tries to enforce.
