## Reliable Microsoft PL-400 Exam Materials, PL-400 Latest Mock Exam

They work closely and check all Microsoft PL-400 PDF questions one by one and they ensure the best possible answers to Microsoft PL-400 exam dumps. So you can trust the PL-400 practice test and start this journey with complete peace of mind and satisfaction. The Microsoft Power Platform Developer (PL-400) exam PDF questions will not assist you in Microsoft Power Platform Developer (PL-400) exam preparation but also provide you with in-depth knowledge about the Microsoft Power Platform Developer (PL-400) exam topics. This knowledge will be helpful to you in your professional life. So Microsoft Power Platform Developer (PL-400) exam questions are the ideal study material for quick Microsoft PL-400 exam preparation.

## Microsoft Power Platform Developer Sample Questions (Q358-Q363):

### NEW QUESTION # 358

A company is creating a new system based on Common Data Service.

You need to select the features that meet the company's requirements.

Which options should you use? To answer, drag the appropriate options to the correct requirements. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

☐

**Answer:**

**Explanation:**

☐

**Reference:**

<https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-entity-relationships>

### NEW QUESTION # 359

You are creating a canvas app for users to interact with contact data in Microsoft Dataverse.

When users display contact data in the app, the following requirements must be met:

- \* By default, all contact data must be displayed, unless data is entered into a text input control; if so, then data must be filtered based on the last name of the contact

- \* A new column must be added when retrieving the data source. The column must combine the Salutation and Full Name columns into a new column named Full Salutation.

- \* All data must be sorted in alphabetical order based on the surname of the contact. You need to finalize the Microsoft Power Fx formula.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 360

You are creating technical designs for several complex business processes.

You need to implement custom business logic based on the requirements.

Which implementation methods should you use? To answer, drag the appropriate implementation methods to the correct requirements. Each implementation method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Business rule

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins.

Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

By combining conditions and actions, you can do any of the following with business rules:

- Set column values

- Clear column values

- Set column requirement levels

- Show or hide columns

- Enable or disable columns

- Validate data and show error messages

- Create business recommendations based on business intelligence.

Box 2: Power Automate flow

You can create a cloud flow that performs one or more tasks (such as sending a report in email):

- Once a day, an hour, or a minute

- On a date that you specify

- After a number of days, hours, or minutes that you specify

<https://docs.microsoft.com/en-us/power-automate/run-scheduled-tasks>

### NEW QUESTION # 361

An organization has a Dynamics 365 Sales environment.

You need to create a Power Apps component.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

#### Explanation

Step 1: Run `pac pcf init -namespace ..`

This is the first command which creates basic folder structure of PCF control project.

Run the following command to create the control. The format of the control is:

`pac pcf init -namespace <specify your namespace here> -name <put component name here> -template <component type>`

Step 2: Run the `npm install` command

#### Install Dependencies

Once 'init' sets up the basic folder, as a next step install all the PCF control dependencies using 'npm install' command.

#### Example:

Now at this point, there is nothing we have actually created. However, the solution created contains sample PCF control code.

Step 3: Run the following `npm run build` command

#### Build PCF Component.

Once you implement the PCF component, build the code for any syntax errors.

#### Syntax:

`npm run build`

### NEW QUESTION # 362

You need to resolve the issue with the new command button. What should you do?

- A. Select the Pass execution context as first parameter option on the event registration form.
- B. Pass ExecutionContext To The function in the action definition.
- C. Pass the value PrimaryControl to the function in the action definition.
- D. Pass the value SelectedControl to the function in the action definition.

#### Answer: A

#### Explanation:

Topic 5, Northwind Traders

#### Background

Northwind Traders uses Microsoft Dynamics 365 Sales to manage its sales process. To better understand its customers, Northwind Traders invests in a team of researchers who gather data from multiple sources. The company stores the data it collects in a Microsoft Azure SQL Database. The company plans to use the data to enrich account records and make the sales team more effective.

#### Environment

\* The company has three Microsoft Power Platform environments with Dynamics 365 Sales installed. The environments are named development, test, and production.

\* Each environment has an application user that can be used for integrations.

\* The company must use solutions to perform all customization and configuration deployment.

#### Data

\* Researchers are responsible for creating account records.

\* Researchers have permissions on the Account table to create records, read all records, and update records they own.

\* A synchronous plug-in runs when an account record is created and could reassign the record to a different user.

\* Users must access data as themselves to enforce security and audit changes.

\* A column named new\_dataid is added to the Account table. The column uniquely identifies which data it should receive.

\* Researchers have researched only the top 20 percent of account records.

#### Web API

\* The company creates an Azure Function to run a RESTful .NET Web API.

\* Data can be retrieved by placing a GET request to the URL `https://dataservice-t[ENVIRONMENTNAME]i[EL]azurewebsites.net/enrich/[DATAID]`.

\* [ENVIRONMENTNAME] is the name of the Microsoft Power Platform environment that requests the data.

\* [DATAID] is the new\_dataid column in the Account table.

\* The Web API response will return a 200 response plus data if the Dataid is found. Otherwise, a 404 response is returned.

\* Developers plan to create a custom connector from the Web API to make it accessible from Microsoft Power Platform.

#### Custom connector

\* The Web API definition used to create The custom connector must be generated based on a low-code technology.

- \* The URL used by the custom connector must incorporate the current environment name without hardcoding values.
- \* Errors generated by the custom connector must not cause downstream processes to fail.
- \* Text descriptions and field placeholder text that describe the use of the custom connector must appear for non-developers.

#### Process

- \* All account records must be updated with data from the Web API once automatically.
- \* Only account records that contain a DataId should be updated by the Web API.
- \* Researchers must create Power Automate flows to specify data analysis priority.
- \* The researchers require a process that repurposes a set of identical steps of parameterized Microsoft Dataverse queries from a Power Automate flow for use in other flows that have different parameters. The researchers want to avoid recreating the steps manually each time they create a flow to save time and avoid errors.

#### Issues

- \* A tester attempts to connect to the production instance of the Web API with a DataId that should return data. The tester receives an error stating that the remote name could not be resolved.
- \* A missing component causes an error to occur when importing the solution that contains the Power Automate flow to update account records in a test environment.

### NEW QUESTION # 363

.....

There is no doubt that you can certainly understand every important knowledge point without difficulty and pass the exam successfully with our PL-400 learning prep as long as you follow the information that we provide to you. After you purchase our PL-400 test materials, then our staff will immediately send our PL-400 training guide to you in a few minutes. Please believe that we dare to guarantee that you will pass the PL-400 exam for sure because we have enough confidence in our PL-400 preparation torrent.
