

Mock Sharing-and-Visibility-Architect Exam - Valid Sharing-and-Visibility-Architect Test Practice

Certified Sharing and Visibility Architect - Mock Exam 1

Access to other Data

Question 1/6

Auto Car has established a specialized team to support the sales team during the electric vehicles (EVs) sales process. This team comprises individuals from various profiles who need access to opportunity records specific to EVs, identifiable by a flag on the opportunity record. How can access to these EV opportunities be provided to the specialized team? Select three options.

- A) Create a public group for the specialized team members.
- B) Manually share the EV opportunities with specific users.
- C) Create a custom list view with a filter to display only EV opportunities.
- D) Use Apex sharing to implement a custom program that shares the opportunities with specific users.
- E) Share the custom list view with the public group created.

Correct Answers:

Create a public group for the specialized team members: Creating a public group for the specialized team members enables the administrator to collectively manage access for team members spread across different profiles, simplifying the sharing process.

Create a custom list view with a filter to display only EV opportunities: Creating a custom list view with a filter to display only EV opportunities provides a tailored view that focuses on the relevant opportunities for the specialized team, making it easier for them to access the necessary records directly from their Salesforce interface.

Share the custom list view with the public group created: Sharing the custom list view with the public group created ensures that all members of the specialized team have access to the custom list view, streamlining their workflow and ensuring they have the information needed to support the EV sales process.

Explanation for Incorrect Options:

Manually share the EV opportunities with specific users: While manually sharing EV opportunities with specific users is possible, it is not the most efficient or scalable solution for sharing records with a team. This process can become cumbersome and time-consuming as the number of opportunities and team members grows.

Use Apex sharing to implement a custom program that shares the opportunities with specific users: Using Apex sharing to create a custom program for sharing opportunities with specific users might be an overcomplication for a requirement that can be met with standard Salesforce functionality. Apex sharing is typically reserved for complex sharing scenarios that cannot be addressed through the platform's declarative sharing options.

Question 2/6

Which library permissions can be assigned to members of a library? Select three options.

- A) Library Administrator
- B) Authors

So our Software version of our Sharing-and-

Visibility-Architect learning guide can help you learn the study materials and prepare for the test better if you already know all the information about the real exam.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q13-Q18):

NEW QUESTION # 13

What should the Architect do to ensure Field-Level Security is enforced on a custom Visualforce page using the Standard Lead Controller?

- **A. Nothing; Field-Level Security will automatically be enforced.**
- B. Use the `Schema.SObject.Lead.isAccessible()` method.
- C. Use the "With Sharing" keyword on the Standard Lead Controller.
- D. Use the `{!Schema.sObjectType.Lead.fields.isAccessible()}` expression

Answer: A

Explanation:

```
<apex:outputText value="{!contactName}" rendered="{!$ObjectType.Contact.fields.Name.Accessible}"/>
```

NEW QUESTION # 14

Universal Containers (UC) requested that branch managers and UC branch staff should only see customers and related information in their geographic location.

Which options should be used together to achieve the requirements?

- **A. Configure organization-wide defaults of the Account object and create sharing rules.**
- B. Configure Role Hierarchy and create sharing rules.
- C. Create the Account Team and add branch manager team members, and configure organization-wide defaults of the Account object.

Answer: A

Explanation:

Explanation

Configuring organization-wide defaults of the Account object and creating sharing rules are two options that should be used together to achieve the requirements, as they allow admins to set the baseline level of access for accounts and then grant additional access based on criteria such as geographic location. Creating the Account Team and adding branch manager team members will not work, as it will require manual maintenance and will not grant access to UC branch staff. Configuring Role Hierarchy will not work, as it will grant access based on the user's position in the organization, not their geographic location.

NEW QUESTION # 15

A custom Invoice object has been created with a master-detail relationship to Account. The accounts receivable (AR) team needs access to invoice records. AR users neither own nor have access to account records. The Account organization-wide default is set to Private. The AR team is unable to find invoices in list views, reports, and Global Search. The architect has been asked to help troubleshoot.

What is preventing AR team members from seeing invoices?

- A. The AR profile does not have Read permission to the Invoice object.
- **B. A sharing rule is missing to share accounts with the AR team.**
- C. A sharing rule is missing to share invoices with the AR team.

Answer: B

NEW QUESTION # 16

Customer complaints for bad interactions with a customer support agent are logged as Cases and assigned to a human resources representative. The agent of the complaint should not see the case, but their manager should.

How is this accomplished?

- A. Trigger on Case to lookup and share to the manager of an Assigned Agent custom field (the subject of the complaint) using Apex Managed Sharing.
- B. Case is owned by the subject of the complaint, so their manager in the role hierarchy can access the record. CRED permission are removed on Case so the agent cannot read the case record.
- C. Criteria based Sharing Rule on Case that shares to the Role Manager and above when a custom field Assigned Agent (subject of the complaint) Is not blank,

Answer: A

Explanation:

Explanation

Using a trigger on Case to lookup and share to the manager of an Assigned Agent custom field using Apex Managed Sharing would allow the HR representative to control the visibility of the case based on the subject of the complaint. Criteria-based sharing rules cannot be used to exclude a specific user from seeing a record.

Changing the owner of the case would affect other aspects of data visibility and security.

NEW QUESTION # 17

To reduce the case time resolution and improve customer satisfaction, Universal Containers (UC) wants to allow specialized marketing consultants to have edit access to Case records of VIP customers. These casts should be visible only to the support rep who owns the case and the marketing consultants.

Which recommendation should a Salesforce architect give to allow this scenario?

- A. Case organization-wide default Private, role hierarchy, and Read Only ownership-based sharing rule.
- B. Case organization-wide default Private and Account Team with Read/Edit permission.
- C. Case organization wide default Private and Case Team with Read/Edit permission.
- D. Case organization-wide default Public Read Only and Case Team with Read permission.

Answer: C

NEW QUESTION # 18

.....

You may find it is hard to catch up at the start of Sharing-and-Visibility-Architect exam certification. Now you are better to seek for some useful study material than complain about the difficulty of the Sharing-and-Visibility-Architect exam.
