Reliable CAS-004 Exam Labs, Braindumps CAS-004 Torrent

Are you organized for this? Do you want to end up a CompTIA certified? In case your answer is high great then we guarantee you that you are on the right region. Check in yourself for CompTIA Advanced Security Practitioner (CASP+) Exam (CAS-004) certification examination and download the CAS-004 exam questions and begin preparation right now.

Passing the CompTIA CASP+ certification exam requires a deep understanding of complex security concepts and advanced technical skills. IT security professionals who pass the exam will have demonstrated their ability to think critically, implement security solutions, and manage risk. CompTIA Advanced Security Practitioner (CASP+) Exam certification will validate their skills in

securing enterprise-level systems and networks, and they will be recognized as experts in the IT security industry.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q290-Q295):

NEW QUESTION # 290
During a phishing exercise, a few privileged users ranked high on the failure list. The enterprise would like to ensure that privileged users have an extra security- monitoring control in place.
Which of the following is the MOST likely solution?

- A. User and entity behavior analytics
- B. Requirements to change the local password
- C. A gap analysis
- D. A WAF to protect web traffic

Answer: A

Explanation:
UEBA will work better because it's doing behavior analytics on the admins unlike a WAF that protects only web traffic in this case.

NEW QUESTION # 291
An organization needs to classify its systems and data in accordance with external requirements. Which of the following roles is best qualified to perform this task?

- A. Data processor
- B. Data steward
- C. Data custodian
- D. Systems administrator
- E. Data owner

Answer: E

Explanation:
The data owner is best qualified to classify systems and data in accordance with external requirements. The data owner is responsible for determining how data should be classified based on its sensitivity, value, and regulatory requirements. They have the authority to decide on classification levels such as public, confidential, or secret, and ensure compliance with external standards. Other roles, like data custodians or processors, support the implementation of data management, but the data owner has the final responsibility for classification. CASP+ highlights the role of data owners in determining data classification and ensuring compliance with external requirements.

NEW QUESTION # 292
A security analyst is concerned that a malicious piece of code was downloaded on a Linux system. After some research, the analyst determines that the suspected piece of code is performing a lot of input/output (I/O) on the disk drive.

procs		---------memory--------			---swap---		--io--		--system--		-----cpu------				
r	b	swpd	free	buff	cache	si	so	bi	bo	in	cs	us	sy	id	wa	st
3	0	0	44712	110052	623096	0	0	304023	30004040	217	883	13	3	83	1	0
1	0	0	44408	110052	623096	0	0	300	200003	88	1446	31	4	65	0	0
0	0	0	44524	110052	623096	0	0	400020	20	84	872	11	2	87	0	0
0	2	0	44516	110052	623096	0	0	10	0	149	142	18	5	77	0	0
0	0	0	44524	110052	623096	0	0	0	0	60	431	14	1	85	0	0

Based on the output above, from which of the following process IDs can the analyst begin an investigation?

- A. 0
- B. 1
- C. 2

- D. 3

Answer: A

NEW QUESTION # 293
The Chief Information Security Officer (CISO) at a software company is trying to document the technical and security requirements needed to connect the company's network to an external system. The additional requirements include procedural and planning information. Which of the following should the CISO use to best accomplish this objective?

- A. MOA
- B. SLA
- C. NDA
- D. ISA

Answer: D

Explanation:
"An Interconnection Security Agreement (ISA) details the technical, procedural, and planning requirements for securely connecting two or more information systems. An ISA builds upon a Memorandum of Agreement (MOA) or similar high-level partnership document to specify security controls, configuration settings, data flow diagrams, incident-response responsibilities, and ongoing management processes for the interconnected environments."
- CompTIA CASP+ Official Study Guide, Third Edition, Chapter 2: Governance, Risk, and Compliance, p. 84
"Use an ISA to define the security requirements, operational procedures, and maintenance plans for any system interconnections. The ISA should reference applicable policies, identify roles and responsibilities, and outline technical controls such as encryption, authentication, and logging mechanisms."
- CompTIA CASP+ CAS-004 Exam Objectives (v7.1), Section 1.4: Interconnection and Collaboration Agreements, p. 6 By creating an ISA, the CISO ensures that both organizations share a clear, binding document that covers not only the security controls and network configurations but also the procedural and planning aspects needed to maintain a secure, ongoing connection.

NEW QUESTION # 294
A consultant needs access to a customer's cloud environment. The customer wants to enforce the following engagement requirements:
* All customer data must remain under the control of the customer at all times.
* Third-party access to the customer environment must be controlled by the customer.
* Authentication credentials and access control must be under the customer's control.
Which of the following should the consultant do to ensure all customer requirements are satisfied when accessing the cloud environment?

- A. Provide code snippets to the customer and have the customer run code and securely deliver its output
- B. use the customer's SSO with read-only credentials and share data using the customer's provisioned secure network storage
- C. Request API credentials from the customer and only use API calls to access the customer's environment.
- D. use the customer-provided VDI solution to perform work on the customer's environment.

Answer: D

Explanation:
The consultant should use the customer-provided VDI solution to perform work on the customer's environment. VDI stands for virtual desktop infrastructure, which is a technology that allows users to access a virtual desktop hosted on a remote server. VDI can help meet the customer's requirements by ensuring that all customer data remains under the customer's control at all times, that third-party access to the customer environment is controlled by the customer, and that authentication credentials and access control are under the customer's control.
