```
%function addKV( object: Object, key: String, value: Any ) =
  object ++ { (key):value }
---
{ hello: "world" } addKV ( "hola","mundo" )
```

D)

```
fun addKV( object: Object, key: String, value: Any ) =
  object ++ { (key):value }
hello: "world" } addKV ( "hola","mundo" )
```

- A. Option A
- B. Option B
- C. Option D
- D. Option C

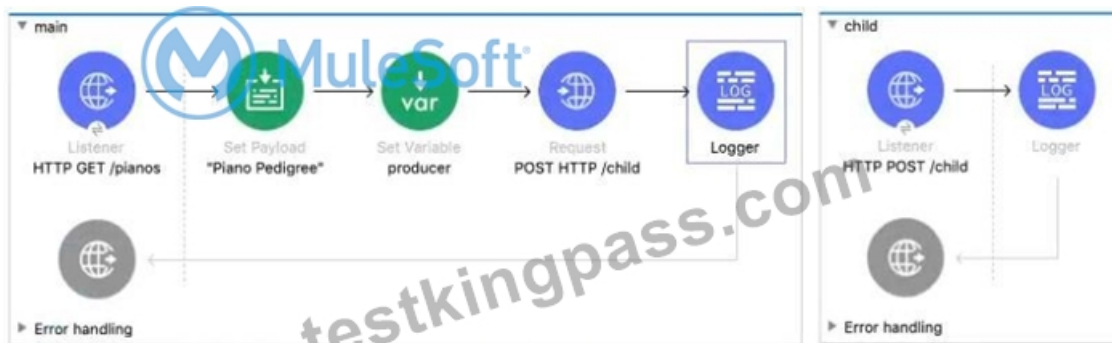

Answer: A

### NEW QUESTION # 184

Refer to the exhibits. The main flow contains an HTTP Request in the middle of the flow. The HTTP Listeners and HTTP Request use default configurations.

A web client submits a request to the main flow's HTTP Listener that includes query parameters for the pedigree of the piano.

What values are accessible to the Logger component at the end of the main flow?

```

<http:request method="POST" doc:name="POST HTTP /child" url="http://localhost:8081/child">
  </http:request>
  <logger level="INFO" doc:name="Logger"/>
</flow>

<flow name="child" >
  <http:listener doc:name="HTTP POST /child" config-ref="HTTP_listener_config" path="/child"/>

```

- A. payload  
pedigree query params
- B. payload  
producer var
- C. payload  
pedigree query params producer var
- D. payload

**Answer: B**

### NEW QUESTION # 185

How are multiple conditions used in a Choice router to route events?

- A. To find the FIRST true condition, then distribute the event to the ONE matched route.
- B. To find the FIRST true condition, then route the same event to the matched route and ALL FOLLOWING routes
- C. None of these
- D. To route the same event to the matched route of EVERY true condition

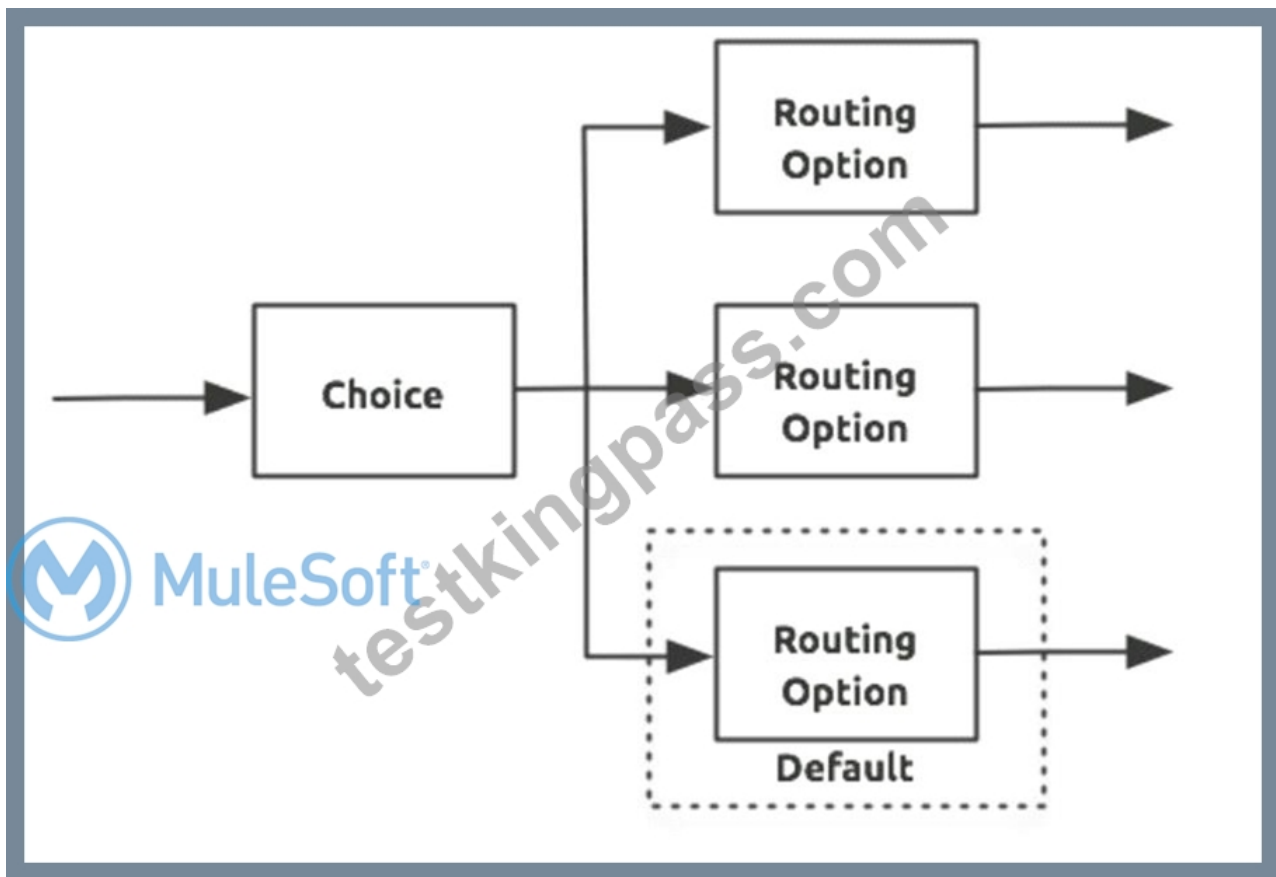

**Answer: A**

Explanation:

Choice router finds the FIRST true condition, then distribute the event to the ONE matched route.

MuleSoft Doc Ref: <https://docs.mulesoft.com/mule-runtime/4.1/choice-router-concept> The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.

#### NEW QUESTION # 186

In an application network. If the implementation but not the interface of a product API changes, what needs to be done to the other APIs that consume the product API?

- A. The applications associated with the other APIs must be recoded
- B. The applications associated with the other APIs must be restarted
- C. Nothing needs to be changed in the other APIs or their associated applications
- D. The other APIs must be updated to consume the updated product API

**Answer: C**

Explanation:

Correct answer is Nothing needs to be changed in the other APIs or their associated applications This is the benefit of having separate interface layer. As there are no changes to interface , no changes are required on the API's which consumes this API in context

#### NEW QUESTION # 187

.....

Passing the MuleSoft MCD-Level-1 is the primary concern. To pass the hard MCD-Level-1 exam on the first try, you must invest more time, effort, and money.
