Test Google Professional-Cloud-DevOps-Engineer Voucher - Answers Professional-Cloud-DevOps-Engineer Real Questions

In the past ten years, our company has never stopped improving the quality of our Professional-Cloud-DevOps-Engineer study materials. For a long time, we have invested much money to perfect our Professional-Cloud-DevOps-Engineer exam questions. At the same time, we have introduced the most advanced technology and researchers to perfect our Professional-Cloud-DevOps-Engineer Test Torrent. At present, the overall strength of our company is much stronger than before. We are the leader in the market and master the most advanced technology. With our high quality of Professional-Cloud-DevOps-Engineer training guide, you will pass the Professional-Cloud-DevOps-Engineer exam for sure.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q171-Q176):

NEW QUESTION # 171

You support an application deployed on Compute Engine. The application connects to a Cloud SQL instance to store and retrieve data. After an update to the application, users report errors showing database timeout messages. The number of concurrent active users remained stable. You need to find the most probable cause of the database timeout. What should you do?

- A. Use Cloud Security Scanner to see whether your Cloud SQL is under a Distributed Denial of Service (DDoS) attack.
- B. Determine whether there is an increased number of connections to the Cloud SQL instance.
- C. Use Stackdriver Profiler to visualize the resources utilization throughout the application.
- **D. Check the serial port logs of the Compute Engine instance.**

Answer: D

NEW QUESTION # 172

Your company follows Site Reliability Engineering principles. You are writing a postmortem for an incident, triggered by a software change, that severely affected users. You want to prevent severe incidents from happening in the future. What should you do?

- A. Design a policy that will require on-call teams to immediately call engineers and management to discuss a plan of action if an incident occurs.
- **B. Ensure that test cases that catch errors of this type are run successfully before new software releases.**
- C. Identify engineers responsible for the incident and escalate to their senior management.
- D. Follow up with the employees who reviewed the changes and prescribe practices they should follow in the future.

Answer: B

Explanation:

Explanation

The best way to prevent severe incidents from happening in the future is to ensure that test cases that catch errors of this type are run successfully before new software releases. This is aligned with the Site Reliability Engineering principle of testing for reliability.

NEW QUESTION # 173

As part of your company's initiative to shift left on security, the infoSec team is asking all teams to implement guard rails on all the Google Kubernetes Engine (GKE) clusters to only allow the deployment of trusted and approved images. You need to determine how to satisfy the InfoSec team's goal of shifting left on security. What should you do?

- A. Configure Identity and Access Management (IAM) policies to create a least privilege model on your GKE clusters
- **B. Use Binary Authorization to attest images during your CI/CD pipeline**
- C. Deploy Falco or Twistlock on GKE to monitor for vulnerabilities on your running Pods
- D. Enable Container Analysis in Artifact Registry, and check for common vulnerabilities and exposures (CVEs) in your container images

Answer: B

Explanation:

The best option for implementing guard rails on all GKE clusters to only allow the deployment of trusted and approved images is to use Binary Authorization to attest images during your CI/CD pipeline. Binary Authorization is a feature that allows you to enforce signature-based validation when deploying container images. You can use Binary Authorization to create policies that specify which images are allowed or denied in your GKE clusters. You can also use Binary Authorization to attest images during your CI/CD pipeline by using tools such as Container Analysis or third-party integrations. An attestation is a digital signature that certifies that an image meets certain criteria, such as passing vulnerability scans or code reviews. By using Binary Authorization to attest images during your CI/CD pipeline, you can ensure that only trusted and approved images are deployed to your GKE clusters.

NEW QUESTION # 174

You support an application running on GCP and want to configure SMS notifications to your team for the most critical alerts in Stackdriver Monitoring. You have already identified the alerting policies you want to configure this for. What should you do?

- A. Select the Webhook notifications option for each alerting policy, and configure it to use a third-party integration tool. Ensure that your team members add their SMS/phone numbers to the external tool.
- B. Download and configure a third-party integration between Stackdriver Monitoring and an SMS gateway. Ensure that your team members add their SMS/phone numbers to the external tool.
- C. Ensure that your team members set their SMS/phone numbers in their Stackdriver Profile. Select the SMS notification option for each alerting policy and then select the appropriate SMS/phone numbers from the list.
- **D. Configure a Slack notification for each alerting policy. Set up a Slack-to-SMS integration to send SMS messages when Slack messages are received. Ensure that your team members add their SMS/phone numbers to the external integration.**

Answer: D

NEW QUESTION # 175

You need to create a Cloud Monitoring SLO for a service that will be published soon. You want to verify that requests to the service will be addressed in fewer than 300 ms at least 90% Of the time per calendar month. You need to identify the metric and evaluation method to use. What should you do?

- **A. Select a latency metric for a request-based method of evaluation.**
- B. Select a latency metric for a window-based method of evaluation.
- C. Select an availability metric for a window-based method Of evaluation.
- D. Select an availability metric for a request-based method of evaluation.

Answer: A

NEW QUESTION # 176
