            <inet>
              <address>
                <name>172.25.11.1/24</name>
              </address>
            </inet>
          </family>
        </unit>
      </interface>
    </interfaces>
  </configuration>
```

Referring to the exhibit, which XML XPath expression will only show the IP address XML elements?

- A. //address/name
- B. /name
- C. //name
- D. /address/name

Answer: A

Explanation:
https://www.w3schools.com/xml/xpath_syntax.asp

NEW QUESTION # 12
Which two processes are used by Junos automation? (Choose two.)

- A. mod
- B. ifd
- C. jsd
- D. kmd

Answer: C,D

Explanation:
Junos automation relies on several key processes to handle various automation and API interactions. Let's break down the two key processes involved:
jsd (Junos Script Daemon):
The jsd process is responsible for handling automation scripts, including Python and SLAX scripts, as well as handling JET (Junos Extension Toolkit) API requests. This process is fundamental in the automation framework of Junos, as it deals with external and internal API requests, ensuring that the necessary scripts are executed when specific triggers or events occur.
kmd (Key Management Daemon):
The kmd process is involved in key management for IPsec and other security services. While its primary function is related to managing cryptographic keys, it plays a role in Junos automation by enabling secure communication and ensuring that automation

tasks involving security services (such as automated IPsec tunnel creation) are handled securely.
Why the Other Options Are Incorrect:
A . mod: This process doesn't exist as part of the Junos automation framework. It's likely a distractor.
C . ifd: The ifd process is associated with the physical interfaces on the device and does not play a role in automation or script processing.
Reference from Juniper Documentation:
Junos Automation Processes

NEW QUESTION # 13
You want to perform a dry run on the myPlays playbook and use a custom inventory file called myRouters.ini.
Which Ansible command would you use in this scenario?

- A. ansible-playbook myPlays --check -i myRouters.ini
- B. ansible-playbook myPlays -extra-vars "inventory_file=myRouters .ini"
- C. ansible-playbook myPlays -limit myRouters
- D. ansible-playbook myPlays -extra-vars "dry run=True" myRouters.ini

Answer: B

NEW QUESTION # 14
A REST API client uses which two HTTP methods to execute RPC requests on the server? (Choose two.)

- A. GET
- B. HEAD
- C. POST
- D. CONNECT

Answer: A,C

Explanation:
REST APIs use HTTP methods to perform different operations on resources. In the context of RPC (Remote Procedure Call) requests:
GET: This method is used to retrieve data from the server. In a REST API, it is commonly used to fetch information about resources, such as the current configuration or operational state.
POST: This method is used to send data to the server to create or update a resource. In the context of RPC, POST is often used to execute a procedure on the server that may result in the modification of a resource or triggering of an action.
Options B (HEAD) and D (CONNECT) are not typically used for executing RPC requests:
HEAD is similar to GET but only retrieves the headers, not the body of the response.
CONNECT is used to establish a tunnel to the server, primarily for SSL-encrypted communication, and is not commonly associated with RESTful RPC operations.
Supporting Reference:
Juniper Networks REST API Documentation: The documentation provides detailed information about the use of HTTP methods in Juniper's RESTful services.
"RESTful Web Services" by Leonard Richardson and Sam Ruby: This book explains the principles of REST and how different HTTP methods, particularly GET and POST, are used to interact with RESTful APIs.

NEW QUESTION # 15
What will determine which data serialization format is used for interfacing with a system?

- A. IDE specifications
- B. the operating system
- C. programming language version
- D. the system's API

Answer: D

NEW QUESTION # 16
