## Free PDF Juniper - JN0-105 - Unparalleled Junos, Associate (JNCIA-Junos) Examcollection Dumps Torrent

We provide the Juniper JN0-105 exam questions in a variety of formats, including a web-based practice test, desktop practice exam software, and downloadable PDF files. RealExamFree provides proprietary preparation guides for the certification exam offered by the Junos, Associate (JNCIA-Junos) (JN0-105) exam dumps. In addition to containing numerous questions similar to the Junos, Associate (JNCIA-Junos) (JN0-105) exam, the Junos, Associate (JNCIA-Junos) (JN0-105) exam questions are a great way to prepare for the Juniper JN0-105 exam dumps.

### Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device</li> </ul>

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q65-Q70):

### NEW QUESTION # 65

What is a benefit of using J-Web?

- A. It provides a customizable dashboard.
- B. It provides console-based management.
- C. It simultaneously manages multiple devices.
- D. It provides more advanced features than the CLI.

**Answer: A**

Explanation:

If you've committed a configuration and then need to revert to the previous configuration, the `rollback` command is used. Since the incorrect IP address has not been committed, as indicated by the `commit check` command being successful, issuing `rollback 1` will undo the changes made in the current session, which includes the accidental entry of the IP address.

### NEW QUESTION # 66

What information is exchanged during a TCP three-way handshake? (Choose two)

- A. application name
- B. interfaces
- C. sequence numbers
- D. port numbers

**Answer: C,D**

Explanation:

The TCP three-way handshake establishes a reliable connection between two hosts. During this process:

\* SYN: The client sends a TCP segment with the SYN flag set, including an initial sequence number (ISN) and port information.

\* SYN-ACK: The server responds with a SYN-ACK, which contains its own sequence number and acknowledgment of the client's ISN.

\* ACK: The client replies with an ACK, confirming receipt of the server's ISN.

Thus, port numbers (to identify the application endpoints) and sequence numbers (to ensure ordered and reliable data transfer) are exchanged.

Interfaces and application names are not exchanged during this process.

From Junos OS Fundamentals / TCP Concepts:

"The TCP three-way handshake establishes a reliable session by exchanging port numbers and sequence numbers between peers. This process synchronizes both sides before data transmission begins." References:

Juniper TechLibrary - TCP Overview

JNCIA-Junos Exam Objective: TCP/IP Concepts

### NEW QUESTION # 67

Click the Exhibit button.

JUNIPER  
NETWORKS

Referring to the exhibit, what should be configured on R1 to advertise a default static route into OSPF?

- A. a loopback interface
- B. a firewall filter
- C. a management interface
- D. a routing policy

**Answer: D**

Explanation:

To advertise a default static route into OSPF on router R1, a routing policy should be configured. This policy would typically include a statement to match the default route (0.0.0.0/0) and then apply an action to set the route as an OSPF external type, which would then be redistributed into the OSPF domain. The routing policy is a set of conditions and actions that determine how routes are imported into or exported from the routing table and how routes are shared between routing instances or routing protocols. After defining the policy, it must be applied to OSPF under the export section of the OSPF configuration on R1. This process will allow R1 to announce the default route to other OSPF routers in the network, which then can use it as a gateway of last resort to reach the Internet or other networks not explicitly known to the OSPF domain.

#### NEW QUESTION # 68

Your router has a route to the 10.1.1.0/24 network with a next hop of r jet.

In this scenario, which action will your router perform when traffic destined to the 10.1.1.0/24 network is received?

- A. The traffic will be discarded and an ICMP unreachable message will be sent to the destination of the traffic.
- B. The traffic will be discarded and an ICMP unreachable message will be sent to the source of the traffic.
- C. The traffic will be silently discarded.
- D. The traffic will be redirected using a default route.

**Answer: C**

Explanation:

In a scenario where a router has a route to a specific network (in this case, 10.1.1.0/24) with a next hop that is unreachable or incorrectly specified (e.g., 'r jet' seems to be a typo or an undefined entity), the router will typically discard the traffic destined for that network. This action is taken because the router cannot determine a valid path to forward the traffic. Unlike some scenarios where the router might generate an ICMP (Internet Control Message Protocol) unreachable message, in many configurations, especially in production networks, the traffic might be silently discarded without providing feedback to the sender, as generating ICMP messages for all undeliverable packets could lead to additional network congestion and potential security concerns.

#### NEW QUESTION # 69

Which two fields are you required to enter when you create a new user account? (Choose two.)

- A. login class

- B. user ID
- C. full name
- D. **username**

**Answer: A,D**

### Explanation:

In Junos OS, when creating a new user account, the minimum required fields are the `username` and the `login` class. The `username` is the identifier for the account, while the `login` class specifies the level of access or permissions the user has on the device. Login classes allow for the differentiation between various roles, such as read-only access or full administrative rights. Other information, such as full name or user ID, is optional and not strictly necessary for the creation of a functional user account.

## NEW QUESTION # 70

Our JN0-105 practice materials are suitable for people of any culture level, whether you are the most basic position, or candidates who have taken many exams, is a great opportunity for everyone to fight back. According to different audience groups, our products for the examination of the teaching content of a careful division, so that every user can find a suitable degree of learning materials. More and more candidates choose our JN0-105 Practice Materials, they are constantly improving, so what are you hesitating about?
