350-601 real pdf dumps, CCNP Data Center 350-601 dump torrent

Now is not the time to be afraid to take any more difficult 350-601 certification exams. Our 350-601 learning quiz can relieve you of the issue within limited time. Our website provides excellent 350-601 learning guidance, practical questions and answers, and questions for your choice which are your real strength. You can take the 350-601 Training Materials and pass it without any difficulty.

Cisco 350-601 exam is a 120-minute exam that consists of 60-70 multiple-choice and drag-and-drop questions. 350-601 exam is

designed to test the candidate's knowledge and skills in implementing and managing data center technologies. 350-601 Exam is available in English and Japanese and can be taken at any Pearson VUE test center.

Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q309-Q314):

NEW QUESTION # 309

Refer to the exhibit.

Why does the python code for Cisco NX-API print an error message?

- A. The "type" is wrong in the header of the request and should be "cli_conf".
- B. NX-API does not allow configuration for features via the requests module.
- C. The "type" is wrong in the body of the request and should be "cli_conf".
- D. The JSON is not a supported format for the NX-API.

Answer: C

Explanation:

"Commands that belong to different message types should not be mixed. For example, show commands are cli_show message type and are not supported in cli_conf mode."

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus7000/sw/programmability/guide/cisco_nexus7000_programmability_guide_8x/b-cisco-nexus7000-programmability-guide-8x_chapter_011.html

the payload "type" value is wrong in the body of the request. For the request to be successful, it should be changes to "cli_conf".

For example, if we run the same request with the updated payload:

```
{
  "ins_api": {
    "version": "1.0",
    "type": "cli_conf",
    "chunk": "0",
    "sid": "1",
    "input": "configure terminal ;feature hsrp",
    "output_format": "json"
  }
}
```

We get a 200 response:

```
{
  "ins_api": {
    "sid": "eoc",
    "type": "cli_conf",
    "version": "1.0",
    "outputs": {
      "output": [
        {
          "code": "200",
          "msg": "Success",
          "body": {}
        },
        {
          "code": "200",
          "msg": "Success",
          "body": {}
        }
      ]
    }
  }
}
```

CLI verification:

```
nxos9kv# sh run | inc hsrp
feature hsrp
```

NEW QUESTION # 310

Refer to the exhibit.

□ An engineer is configuring a VSAN on the network. Which option must be selected to create the VSAN?

- A. FC Zoning Enabled
- B. Common/Global
- C. Fabric A
- D. Fabric B

Answer: C

NEW QUESTION # 311

An engineer implements a Cisco UCS C-Series Server that must adhere to these security requirements:

- * Unencrypted communication must be disabled.
- * The session timeout must not exceed 15 minutes.
- * Unencrypted traffic must be automatically diverted.
- * CLI-based management must use nondefault ports.

Which configuration set meets these requirements?

□

- A. Option B
- B. Option D
- C. Option C
- D. Option A

Answer: A

NEW QUESTION # 312

□

Refer to the exhibit. User1 and User2 are connected to VTEP1 switch. The users can reach the WEB server.

The monitoring tool shows degrading network performance and excessive traffic is sent from User2 to reach the WEB server.

Which storm control percentage levels must be used to suppress traffic from User2 and allow all traffic types from User1?

- A. Level 0 on Eth1/2 and Level 0 on Eth1/5
- B. Level 0 on Eth1/2 and Level 100 on Eth1/1
- C. Level 0 on Eth1/1 and Level 100 on Eth1/2
- D. Level 100 on Eth1/1 and Level 100 on Eth1/5

Answer: B

NEW QUESTION # 313

A server engineer wants to control power uses on a Cisco UCS C-series rack server down to the component level. Which two components support specific power limits? (Choose two.)

- A. graphic card
- B. network controller
- C. processor
- D. memory
- E. storage controller

Answer: C,D

NEW QUESTION # 314
