Certification Data-Architect Dump | Data-Architect Pdf Format

Our Data-Architect free demo provides you with the free renewal in one year so that you can keep track of the latest points happening. As the questions of exams of our Data-Architect exam dumps are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long, our Data-Architect Practice Engine can serve as a conducive tool for you make up for those hot points you have ignored. You will be completed ready for your Data-Architect exam.

Salesforce Certified Data Architect Sample Questions (Q125-Q130):

NEW QUESTION # 125

An Architect needs to document the data architecture for a multi-system, enterprise Salesforce implementation. Which two key artifacts should the Architect use? (Choose two.)

- A. Non-functional requirements
- B. Integration specification
- C. Data model
- D. User stories

Answer: B,C

NEW QUESTION # 126

Universal Containers (UC) is planning to move away from legacy CRM to Salesforce. As part of one-time data migration, UC will need to keep the original date when a contact was created in the legacy system. How should an Architect design the data migration solution to meet this requirement?

- A. Create a new field on the Contact object to capture the Created Date. Hide the standard Created Date field using Field - Level Security.
- B. Write an Apex trigger on the Contact object, before insert event to set the original value in a standard Created Date field.
- **C. Enable "Set Audit Fields" and assign the permission to the user loading the data for the duration of the migration.**
- D. After the data is migrated, perform an update on all records to set the original date in a standard Created Date field.

Answer: C

Explanation:

Enabling "Set Audit Fields" allows the user loading the data to set the value of the standard CreatedDate field to match the original date from the legacy system. This is a one-time permission that can be revoked after the migration is completed. The other options would either not work or require additional customization

NEW QUESTION # 127

Universal Containers (UC) wants to store product data in Salesforce, but the standard Product object does not support the more complex hierarchical structure which is currently being used in the product master system.

How can UC modify the standard Product object model to support a hierarchical data structure in order to synchronize product data from the source system to Salesforce?

- A. Create a custom master-detail field on the standard Product to reference the child record in the hierarchy.
- B. Create a custom lookup field on the standard Product to reference the child record in the hierarchy.
- C. Create an Apex trigger to synchronize the Product Family standard picklist field on the Product object.
- **D. Create a custom lookup field on the standard Product to reference the parent record in the hierarchy.**

Answer: D

Explanation:

Creating a custom lookup field on the standard Product to reference the parent record in the hierarchy is the correct way to modify the standard Product object model to support a hierarchical data structure. This allows UC to create a self-relationship on the Product object and define parent-child relationships among products.

NEW QUESTION # 128

Universal Containers (UC) has a Salesforce org with multiple automated processes defined for group membership processing. UC also has multiple admins on staff that perform manual adjustments to the role hierarchy. The automated tasks and manual tasks overlap daily, and UC is experiencing "lock errors" consistently.

What should a data architect recommend to mitigate these errors?

- **A. Enable granular locking.**
- B. Enable sharing recalculations.
- C. Remove SOQL statements from Apex Loops.
- D. Ask Salesforce support for additional CPU power.

Answer: A

Explanation:

Enabling granular locking (option A) is the best recommendation to mitigate these errors, as it allows finer control over how records are locked during automated or manual processes, and reduces the chances of lock contention or deadlock. Removing SOQL statements from Apex Loops (option B) is a good practice for improving performance and avoiding governor limits, but it does not directly address the lock errors issue. Enabling sharing recalculations (option C) is also not relevant for this issue, as it is used to update sharing rules and recalculate access for records. Asking Salesforce support for additional CPU power (option D) is also not a viable solution, as it does not solve the root cause of the lock errors.

NEW QUESTION # 129

Universal Containers keeps its Account data in Salesforce and its Invoice data in a third -party ERP system. They have connected the Invoice data through a Salesforce external object. They want data from both Accounts and Invoices visible in one report in one place. What two approaches should an architect suggest for achieving this solution? Choose 2 answers

- A. Create a report in an external system combining Salesforce Account data and Invoice data from the ERP.
- B. Create a separate Salesforce report for Accounts and Invoices and combine them in a dashboard.
- C. Create a Visualforce page combining Salesforce Account data and Invoice external object data.
- D. Create a report combining data from the Account standard object and the Invoices external object.

Answer: A,C

Explanation:

Creating a report in an external system combining Salesforce Account data and Invoice data from the ERP, and creating a Visualforce page combining Salesforce Account data and Invoice external object data are two approaches that an architect can suggest for achieving this solution. Both of these approaches can display data from both Accounts and Invoices in one place, using either an external reporting tool or a custom web page. Creating a report combining data from the Account standard object and the Invoices external object is not possible because Salesforce does not support reporting on external objects. Creating a separate Salesforce report for Accounts and Invoices and combining them in a dashboard is not ideal because it will not show the data in one report, but rather in two separate components.

NEW QUESTION # 130

.....

Our brand has marched into the international market and many overseas clients purchase our Data-Architect exam dump online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our Data-Architect latest study question and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the Salesforce exam dump and the experiences we accumulate for decades are incalculable. All of these lead to our success of Data-Architect learning file and high prestige.
