

Salesforce Mule-Dev-202 Marvelous Reliable Test Tips

P.S. Free 2026 Salesforce Mule-Dev-202 dumps are available on Google Drive shared by PassLeader:
<https://drive.google.com/open?id=1Q9EgnJfeuBSChyXeuB26q2EOetbA6qPv>

If you want to constantly improve yourself and realize your value, if you are not satisfied with your current state of work, if you still spend a lot of time studying and waiting for Mule-Dev-202 qualification examination, then you need our Mule-Dev-202 material, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our Mule-Dev-202 Study Materials have three different versions, including the PDF version, the software version and the online version.

We guarantee you that our top-rated Salesforce Mule-Dev-202 practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the Salesforce Mule-Dev-202 certification exam on the very first go. The authority of Salesforce Mule-Dev-202 Exam Questions rests on its being high-quality and prepared according to the latest pattern.

Mule-Dev-202 Valid Dumps Files - Mule-Dev-202 Guaranteed Passing

With the Mule-Dev-202 certification you can gain a range of career benefits which include credibility, marketability, validation of skills, and access to new job opportunities. And then you need to enroll in the Mule-Dev-202 exam and prepare well to crack this Mule-Dev-202 Exam with good scores. The PassLeader will provide you with real, updated, and error-free Salesforce Mule-Dev-202 Exam Dumps that will enable you to pass the final Mule-Dev-202 exam easily.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q24-Q29):

NEW QUESTION # 24

AnyAirlines selected AWS Cloud services as their infrastructure platform. They need to implement Anypoint Platform as the integration solution along with existing cloud capabilities like vertical/horizontal scalability and zero downtime redeployments. Which type of deployment strategy is needed?

- A. Private Cloud Edition
- B. Cloudhub
- C. Hybrid
- **D. Runtime Fabric**

Answer: D

Explanation:

Anypoint Runtime Fabric: Anypoint Runtime Fabric (RTF) is designed for deploying Mule applications on any cloud infrastructure, including AWS. It supports vertical and horizontal scalability and enables zero- downtime deployments, which aligns with AnyAirlines' requirements.

Reference: Anypoint Runtime Fabric Overview

Vertical/Horizontal Scalability: RTF allows scaling applications both vertically (adding more resources to existing nodes) and

horizontally (adding more nodes to the cluster). This ensures high availability and performance.

Reference:Runtime Fabric Scalability

Zero Downtime Deployments:RTF supports zero-downtime deployments by utilizing rolling updates and canary deployments, ensuring that updates do not disrupt ongoing operations.

Reference:Zero Downtime Deployment with RTF

AWS Integration:RTF can be deployed on AWS, leveraging existing cloud infrastructure capabilities and providing a seamless integration experience.

Reference:Deploying RTF on AWS

NEW QUESTION # 25

AnyAirlines is attempting to automate a process that triggers when a case is created in Salesforce but requires data to be extracted from a website without an API. It plans to automate the process using MuleSoft Composer and MuleSoft RPA.

During the design phase, it uses RPA Recorder to gather the steps required to interact with the website.

What will automatically be gathered by RPA Recorder when recording a manual activity?

- A. Variable information used by the user during the process
- B. Conditional decisions made by the user during the process
- C. Documentation on the elements used by the user during the process
- D. Comments on the purpose of the different steps carried out by the user

Answer: C

Explanation:

When using MuleSoft RPA Recorder to gather steps required for interacting with a website, it automatically collects documentation on the elements used by the user during the process.

MuleSoft RPA Recorder:

Automatic Element Documentation:The RPA Recorder captures all the elements (e.g., buttons, fields, and other UI components) that the user interacts with during the manual process recording.

Metadata Collection:It collects metadata such as element IDs, types, and positions, which are essential for accurately replicating the manual actions during automation.

Why Not Other Options:

Variable Information:While variable information is important, it is not the primary focus of the RPA Recorder. Variables can be defined post-recording.

Conditional Decisions:Conditional logic is typically added during the design phase of the RPA script, not during the initial recording.

Comments:User comments on the purpose of steps are not automatically recorded; this information needs to be added manually.

References:

For more detailed information on how MuleSoft RPA Recorder works, refer to MuleSoft's official RPA documentation

NEW QUESTION # 26

Northern Trail Outfitters (NTO) uses Flow Orchestration to automate quote development. The "Review Quote" work item is performed by their team of technical writers but can be fulfilled by any technical writer on the team.

How can NTO ensure the "Review Quote" work item is assigned to the correct Salesforce user?

- A. Create a Group for the team of Salesforce Users and assign the work item to the group.
- B. Use MuleSoft RPA to review the document and submit it for approval if no issues are found.
- C. Create a user collection variable and assign the work item to the user collection.
- D. Use backend steps to automate work item assignment to the next available technical writer.

Answer: A

Explanation:

To ensure the "Review Quote" work item is assigned to the correct Salesforce user within the team of technical writers, the following approach can be used:

Creating a Group:

Create a Group in Salesforce that includes all the technical writers who are eligible to perform the "Review Quote" work item. This group acts as a collective resource pool.

Assigning the Work Item to the Group:

When the "Review Quote" work item is created in Flow Orchestration, assign it to the group rather than an individual user.

Salesforce will then allow any available technical writer within the group to pick up and complete the task.

Ensuring Flexibility and Availability:

This method ensures that the work item can be completed by any technical writer in the team, providing flexibility and improving the chances of timely completion by utilizing the group's collective availability.

NEW QUESTION # 27

Northern Trail Outfitters needs to develop an application network that follows a MuleSoft-recommended, API-led connectivity approach and meets the following requirements:

provides data to mobile and web interfaces

aggregates and transforms data

retrieves data from databases

In which API tier should the data aggregation and transformation take place?

- A. System
- B. Business
- C. Experience
- **D. Process**

Answer: D

Explanation:

API-led Connectivity: MuleSoft's API-led connectivity approach divides APIs into three tiers: System, Process, and Experience. Each tier has a specific role in managing data and operations.

Reference: MuleSoft API-led Connectivity

Experience APIs: These APIs are designed to provide data to end-user interfaces, such as mobile and web applications. They typically format the data in a way that is easy for the user interface to consume.

Reference: Experience API Definition

Process APIs: Process APIs are responsible for orchestrating and executing business logic. They aggregate, transform, and process data from multiple sources before passing it to Experience APIs or other downstream systems.

Reference: Process API Role

System APIs: These APIs provide direct access to core systems and data sources. They handle CRUD (Create, Read, Update, Delete) operations and expose data from underlying systems.

Reference: System API Role

Data Aggregation and Transformation: Given the requirements to aggregate and transform data, the Process tier is the appropriate place. Process APIs handle complex business logic and data transformation, making them ideal for aggregating data from multiple sources and transforming it as needed.

Reference: Process APIs and Data Transformation

NEW QUESTION # 28

Northern Trail Outfitters (NTO) has a new business channel that requires exposing their existing non-MuleSoft APIs to the public. They do not have an Anypoint Flex Gateway.

The NTO digital channel team wants to leverage Anypoint Platform as its API management tool.

What is the most time-efficient mechanism of securing their backend systems?

- A. Rewrite the existing APIs using MuleSoft.
- B. Expose each endpoint as a basic endpoint.
- **C. Create a proxy in front of each existing API.**
- D. Use a basic endpoint with a configured consumer endpoint.

Answer: C

Explanation:

To expose existing non-MuleSoft APIs and secure them efficiently using Anypoint Platform, you can create API proxies. This approach provides several benefits:

API Proxy Creation:

Creating a proxy involves setting up an intermediary that forwards requests to the existing backend APIs. This allows you to leverage Anypoint Platform's API management capabilities without rewriting the existing APIs.

Proxies can be created quickly and configured to apply various security and governance policies.

Security and Management:

By creating a proxy, you can secure the APIs using Anypoint Platform's features such as rate limiting, authentication, and monitoring. This method is time-efficient and leverages the robust security features of the Anypoint Platform without significant redevelopment effort.
