Reliable Citrix 1Y0-204 Test Labs - 1Y0-204 Latest Exam Vce

In order to make you have a deeper understanding of what you are going to buy, we offer you free demo for 1Y0-204 training materials. We recommend you have a try before buying. If you are quite content with the 1Y0-204 training materials, just add them into your cart and pay for them. You will get the downloading link and password and you can start your learning right now. In addition, we have online and offline chat service stuff who possess the professional knowledge of the 1Y0-204 Exam Dumps, if you have any questions, just contact us.

The Citrix 1Y0-204 Exam covers a range of topics, including installing, configuring, and managing Citrix Virtual Apps and Desktops 7 environments, as well as troubleshooting and optimizing these environments. It also covers topics related to deploying and managing applications and desktops, configuring policies and user profiles, and securing Citrix Virtual Apps and Desktops 7 environments.

Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q143-Q148):

NEW QUESTION # 143
Scenario: A Citrix Administrator configures the 'Auto connect client drives' user settings to map client drives within the HDX session for all published desktops. The setting is configured in a Baseline Group Policy Object (GPO) and linked to an Organizational Unit (OU) that contains all of the published desktops.
When a user launches the desktop, client drives are NOT mapped.
What is a possible reason?

- A. Desktops need to be restarted for the policy to be applied.
- B. Loopback processing is NOT enabled.
- C. The GPO needs to be linked to the User OU.
- D. gpupdate /force needs to be executed on all of the machines.

Answer: B

NEW QUESTION # 144
Scenario: A Citrix Administrator is in the process of migrating a Citrix Virtual Apps and Desktops on-premises deployment to Citrix Cloud with an on-premises resource location. StoreFront and Citrix ADC machines are located on premises. The administrator notices that application enumeration is NOT occurring for resources managed by the Citrix Cloud Site.
What does the administrator need to change in order to get application enumeration working?

- A. Remove the Citrix polices on the old Citrix Delivery Controllers.
- B. Add the Citrix Cloud Connectors as Secure Ticket Authority (STA) servers on Citrix ADC and StoreFront.
- C. Decommission the old Citrix Delivery Controllers and Databases.
- D. Add the Citrix Cloud Connectors as XML servers to the existing StoreFront servers.

Answer: B

Explanation:
To get application enumeration working in a Citrix Cloud migration scenario with on-premises StoreFront and Citrix ADC, the administrator needs to add the Citrix Cloud Connectors as Secure Ticket Authority (STA) servers on both Citrix ADC and StoreFront12.

NEW QUESTION # 145
Which two statements are valid when using Citrix Profile Streaming? (Choose two.)

- A. Profile Streaming will delay the logon process.
- B. Profile Streaming is disabled by default.
- C. Registry entries and files in the pending area are fetched when accessed.
- D. The files and folders are fetched on demand.

Answer: B,C

NEW QUESTION # 146
Scenario: Client connections to certain virtual servers are abnormally high. A Citrix Administrator needs to be alerted whenever the connections pass a certain thershold.
How can the administrator use Citrix Application Delivery Management to accomplish this requirement?

- A. Configure specific alerts for virtual servers using Citrix Application Delivery Management.
- B. Configure TCP Insight on the Citrix Application Delivery Management.

- C. Configure Network Reporting on the Citrix Application Delivery Management by setting the threshold and email address.
- D. Configure SMTP Reporting on the Citrix Application Delivery Management by adding the threshold and email address.

Answer: C

Explanation:
According to the Citrix Virtual Apps and Desktops 7 Deployment and Administration course description12, one of the objectives is to "Configure Citrix ADC to monitor and report on the health of your environment".
The course also covers how to use Citrix Application Delivery Management to monitor and manage multiple Citrix ADC instances.
According to the Citrix documentation3, Network Reporting on Citrix Application Delivery Management allows you to generate reports based on various metrics and events collected from the Citrix ADC instances. You can also configure thresholds and alerts for the reports, and specify the email addresses to receive the notifications. Therefore, the correct answer is D.

NEW QUESTION # 147
A user complains to a Citrix Administrator that application load time is long when they log on at the beginning of the work day. Which feature can the administrator enable to reduce the perceived start time of the user's application?

- A. Application Prelaunch
- B. Application Keyword
- C. Application Lingering
- D. Application Limits

Answer: A

Explanation:
Application Prelaunch is a feature that can be enabled to reduce the perceived start time of applications. It prelaunches an application session when the user logs on, so the application is ready when the user needs it, thus reducing the wait time during the initial access
