SC-900 Exam Materials are the Most Excellent Path for You to Pass SC-900 Exam

Our SC-900 exam questions have three versions: the PDF, Software and APP online. Also, there will have no extra restrictions to your learning because different versions have different merits. All in all, you will not be forced to buy all versions of our SC-900 Study Materials. You have the final right to select. Please consider our SC-900 learning quiz carefully and you will get a beautiful future with its help.

Microsoft Security Compliance and Identity Fundamentals Sample Questions (Q128-Q133):

NEW QUESTION # 128

For each of the following statement, select Yes if the statement is true Otherwise, select No.

NOTE: Each connect selection a worth one point.

Answer:

Explanation:

Explanation:

An external email address can be used to authenticate self-service password reset (SSPR). # Yes A notification to the Microsoft Authenticator app can be used to authenticate self-service password reset (SSPR). # Yes To perform self-service password reset (SSPR), a user must already be signed in and authenticated to Azure AD. # No For Microsoft Entra self-service password reset (SSPR), users must register one or more authentication methods that can later be used when they forget their password or are locked out. Microsoft's end-user guidance states that an email address option lets users configure "an alternate email address that can be used without requiring your forgotten or missing password," and that this method is available only for password reset. In practice, this alternate address is typically a personal or external email (for example, Gmail), so using an external email to authenticate SSPR is valid.

SSPR can also use the Microsoft Authenticator app as an authentication method. Microsoft documents that Authenticator push notifications, including number matching, are supported for several scenarios, explicitly listing self-service password reset (SSPR) among them. This means a push notification to the app on the user's device can be used to verify identity during SSPR.

Finally, SSPR is designed for situations where the user cannot sign in. Official SSPR process descriptions explain that users start from the "Can't access your account?" or password-reset page, provide their username, and then use their registered methods to prove identity. They do not need to be already authenticated to Azure AD; SSPR exists precisely to recover access when sign-in fails.

NEW QUESTION # 129

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
