Nutanix Certified Associate v6.10 Sample Questions (Q64-Q69):

NEW QUESTION # 64
What role does a Replication Factor of 2 or 3 play in ensuring data integrity and recovery?

- A. It reduces the need for offsite backup solutions.
- B. It limits the scope of hardware failures during recovery operations.
- C. It accelerates data transfer to remote backup sites.
- D. It ensures that multiple copies of data are available for recovery.

Answer: D

Explanation:
Replication Factor (RF) defines the number of copies of data stored in a Nutanix cluster. RF2 ensures two copies of data, and RF3 ensures three copies. This redundancy allows the system to maintain data integrity and recoverability even in the event of hardware failures.
* A. It limits the scope of hardware failures during recovery operations:Incorrect, as RF focuses on data replication, not limiting failure scopes.
* B. It ensures that multiple copies of data are available for recovery:Correct, as RF directly relates to data redundancy and recovery capabilities.
* C. It accelerates data transfer to remote backup sites:Incorrect, as RF does not affect remote backup speed.
* D. It reduces the need for offsite backup solutions:Incorrect, as RF works within the cluster, not as a replacement for offsite backups.

NEW QUESTION # 65
Which storage container option reduces the available storage to other containers?

- A. Advertised Capacity
- B. Capacity Deduplication
- C. Reserved Capacity
- D. Erasure Coding

Answer: C

Explanation:
TheReserved Capacityoption in a storage container explicitly reserves a portion of cluster storage for that container. This reservation reduces the amount of storage available for other containers. Reserved Capacity ensures that specific workloads have guaranteed storage resources, preventing resource contention or overcommitment.
Other options:
* Advertised Capacity: Defines the storage limit displayed to users but does not reserve storage.
* Erasure Coding: Optimizes storage efficiency but does not reduce available capacity.
* Capacity Deduplication: Reduces space consumption by eliminating duplicate data but does not affect other containers' storage.

NEW QUESTION # 66

Which feature should be enabled to prevent password access to the CVM for both the nutanix and admin user accounts?

- A. STIG
- B. Cluster lockdown
- C. Data-at-Rest Encryption
- D. RBAC Policy on PC

Answer: B

Explanation:
To prevent password access to the CVM for both the nutanix and admin user accounts, Cluster Lockdown should be enabled. Cluster Lockdown restricts SSH access to the Controller VM (CVM), effectively disabling password-based logins for enhanced security. Access is then managed through more secure means, such as console access or specific tools like Nutanix Support.
* A. Cluster Lockdown:Correct, as this prevents SSH-based access to the CVM.
* B. STIG:Incorrect, as STIG (Security Technical Implementation Guide) focuses on broader compliance measures.
* C. RBAC Policy on PC:Incorrect, as RBAC (Role-Based Access Control) controls Prism Central permissions, not CVM access.
* D. Data-at-Rest Encryption:Incorrect, as this secures stored data, not access credentials.

NEW QUESTION # 67
An administrator needs to ensure that the three VMs of an application cluster are never placed onto the same hypervisor by creating a VM- VM Anti-Affinity Policy.
What should the administrator use to complete this task?

- A. acli
- B. Prism Element
- C. Prism Central
- D. Ncli

Answer: C

Explanation:
To create a VM-VM Anti-Affinity Policy ensuring VMs are not placed on the same hypervisor, Prism Central is required. Anti-affinity policies are cluster-wide configurations managed through Prism Central's policy- based interface, enabling placement rules to distribute workloads effectively.
Steps:
* Navigate to Prism Central > Policies.
* Create a new Anti-Affinity Policy.
* Select the VMs and configure the policy to ensure separation.

NEW QUESTION # 68
Which bridge does the Controller VM use by default to communicate with the AHV host it runs on?

- A. bridge0
- B. bro
- C. vs0
- D. virbro

Answer: A

Explanation:
The Controller VM (CVM) uses the vs0 bridge by default to communicate with the AHV host it runs on. The vs0 bridge is a virtual switch configured on the AHV host, providing connectivity between the CVM, virtual machines, and external networks. This setup ensures efficient network communication within the Nutanix cluster.

Other options:
* virbro: Typically used in standalone KVM configurations, not in Nutanix AHV.
* broandbridge0: Incorrect references to Nutanix networking structures.
