## ISC Certified in Cybersecurity (CC) Sample Questions (Q379-Q384):

### NEW QUESTION # 379

A tool used to inspect outbound traffic to reduce threats:

- A. Firewall
- B. Anti-malware
- **C. DLP**
- D. NIDS

**Answer: C**

Explanation:

Data Loss Prevention (DLP) tools inspect outbound traffic to prevent unauthorized data exfiltration.

### NEW QUESTION # 380

In order for a biometric security to function properly, an authorized person's physiological data must be \_\_\_\_\_.

- A. Deleted
- B. Modified
- C. Broadcast
- **D. Stored**

**Answer: D**

**NEW QUESTION # 381**

The order of controls used in defense in depth:

- A. Assets # Administrative # Physical # Technical
- **B. Assets # Administrative # Technical # Physical**
- C. Assets # Physical # Administrative # Technical
- D. Physical # Administrative # Technical # Assets

**Answer: B**

Explanation:

Defense in depth begins by identifying assets, followed by administrative controls (policies), technical controls (logical), and physical controls to protect systems at multiple layers.

**NEW QUESTION # 382**

What is the main purpose of using multi-factor authentication (MFA) in a security system?

- A. To ensure data integrity
- B. To protect against malware
- **C. To add an extra layer of security to user authentication**
- D. To prevent data breaches

**Answer: C**

Explanation:

The primary purpose of multi-factor authentication (MFA) is to add additional layers of security to user authentication by requiring more than one authentication factor. These factors typically include something you know, something you have, and something you are.

MFA significantly reduces the risk of unauthorized access, even if one factor—such as a password—is compromised. Attackers would still need access to the additional factors to authenticate successfully.

While MFA can help reduce the likelihood of breaches, it does not directly prevent malware or ensure data integrity. Its focus is on strengthening identity verification.

NIST, CIS, and other security frameworks strongly recommend MFA, particularly for remote access, privileged accounts, and cloud environments, due to its proven effectiveness in preventing account compromise.

**NEW QUESTION # 383**

What is the main purpose of using digital signatures in communication security?

- A. To encrypt sensitive data during transmission
- B. To prevent unauthorized access to a network
- **C. To verify the identity of the sender and ensure the integrity of the message (Correct)**
- D. To compress data to reduce bandwidth usage

**Answer: C**

**NEW QUESTION # 384**
