有效的AD0-E725證照考試和最佳的Adobe認證培訓 - 權威的Adobe Adobe Commerce Developer Expert

你已經報名參加了AD0-E725認證考試嗎？是不是面對一大堆的復習資料和習題感到頭痛呢？KaoGuTi可以幫您解決這一問題，它絕對是你可以信賴的網站！只要你選擇使用KaoGuTi網站提供的資料，絕對可以輕鬆通過考試，與其花費時間在不知道是否有用的復習資料上，不如趕緊來體驗KaoGuTi帶給您的服務，還在等什麼趕緊行動吧。

最新的 Adobe Commerce AD0-E725 免費考試真題 (Q26-Q31):

問題 #26

While implementing additional functionality, a Developer needs to modify a class with protected and private methods requiring custom logic. The Developer finds that no other Magento customization, such as plugins, will work.

What should the Developer do in this scenario?

- A. Use a preference and extend the original class.
- B. Use an observer to customize data processed by the class.
- C. Use a patch to implement the necessary customizations.

答案： A

解題說明：

If methods are protected or private, plugins cannot be used because they only work with public methods. In this case, the developer should use a class preference to replace the original class with a custom class that extends it.

A (preference) is correct.

B (observer) cannot be used because observers only react to events, not protected/private methods.

C (patch) is not a customization mechanism; data/patches are used for database schema or data updates.

問題 #27

A client receives an alert stating that storage on their production environment is nearly full. They are using Pro architecture and are concerned about storage capacity. A Developer is asked to increase the disk size.

How should this problem be solved?

- A. Extend their Adobe license.
- B. Modify the magento.app.yaml file.
- C. Open a ticket with Adobe support.

答案： C

問題 #28

A multi-source merchant asks an Adobe Commerce Developer to prioritize inventory source selection based on shipping address and minimal delivery cost.

How should the Developer implement this task functionality?

- A. Configure Distance Priority Algorithm and implement PlaceReservationsForSalesEventInterface.
- B. Register new Source Selection Algorithms (SSA) via di.xml and implement SourceSelectionInterface.
- C. Use Source Priority Algorithm and utilize GetSourceSelectionAlgorithmList.

答案： B

解題說明：

To customize how inventory sources are prioritized, developers must create a new Source Selection Algorithm (SSA). This is done by registering a new SSA in di.xml and implementing SourceSelectionInterface. This allows developers to define rules such as shipping address proximity or delivery cost.

B is partially correct: Distance Priority Algorithm exists, but implementing PlaceReservationsForSalesEventInterface is not the right way to customize selection logic.

C Source Priority Algorithm is fixed (based on predefined priority), not custom.

Reference:

Adobe Commerce DevDocs - Inventory Source Selection Algorithm

Official Documentation Extracts:

"To customize source selection behavior, implement a custom Source Selection Algorithm (SSA). The algorithm must implement SourceSelectionInterface and be registered via dependency injection (di.xml)."- Adobe Commerce DevDocs: Custom Source Selection Algorithm

"Adobe Commerce provides default SSAs: Source Priority Algorithm and Distance Priority Algorithm

Custom SSAs can be created to satisfy specific business requirements such as delivery costs."- Adobe Commerce Inventory Management Guide

問題 #29

A client uses a straightforward custom payment method which allows a pregenerated code to be used as payment. The code is

provided directly to customers through email and other communications. The client reports a problem with someone fraudulently guessing the codes correctly. They want to implement an API check that ensures the code exists in their system when the code is applied.

Where should the Developer add this change?

- A. Create an after plugin on the canAuthorize method and implement the API check there.
- **B. Create a custom validator that will check for this code at the time the order is placed.**
- C. Create a before plugin on the canCapture method and implement the API check there.

答案： B

問題 #30

A Developer creates daily cron jobs to automate a client's business processes, including automated stock imports via CSV files once per day. After a few days, it is noted that the cron jobs do not run daily. The Developer discovers the cron jobs are sometimes assigned a missed status and do not execute, and other cron jobs become stuck during the execution time of the custom cron jobs. Which option should the Developer use to ensure the cron jobs consistently run each day?

- A. In the execute() function, implement a lock checker to make sure the cron runs alone.
- B. Set the cron jobs to run multiple times per day instead of once daily.
- **C. Implement a custom group for the cron jobs in the crontab.xml.**

答案： C

解題說明：

The correct solution is to create a custom cron group.

By default, Magento cron jobs run in shared groups (default, index, etc.). If a heavy/long-running job blocks the queue, other jobs in the same group may become delayed or marked as "missed." By assigning heavy processes (such as stock imports) to a dedicated group, developers ensure that the job is managed separately, avoiding conflicts.

Option B does not solve the root scheduling issue; it just increases runs.

Option C (lock checker) prevents overlaps but does not prevent the missed status caused by shared cron queue congestion.
