C-IBP-2502 Practice Test Engine | Dumps C-IBP-2502 Torrent

Our C-IBP-2502 exam prep is elaborately compiled and highly efficiently, it will cost you less time and energy, because we shouldn't waste our money on some unless things. The passing rate and the hit rate are also very high, there are thousands of candidates choose to trust our C-IBP-2502 Guide Torrent and they have passed the exam. We provide with candidate so many guarantees that they can purchase our study materials no worries. The C-IBP-2502 exam prep we provide can help you realize your dream to pass exam and then own a C-IBP-2502 exam torrent.

SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details

Topic 1	• Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.
Topic 2	• Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 3	• Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Topic 4	• Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 5	• General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Topic 6	• User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.
Topic 7	• Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Topic 8	• Analytics and Reporting: his section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q49-Q54):

NEW QUESTION # 49
Manage Analytics Stories introduces advanced visualization features within SAP Integrated Business Planning for Supply Chain. What are some of the main capabilities of the stories? Note: There are 3 correct answers to this question.

- A. Specific chart and table filters can be applied within the story
- B. Stories must be re-created in each SAP IBP environment
- C. The story is structured around one responsive page
- D. Links to external URLs can be embedded in the story

Answer: A,B,D

Explanation:
The Manage Analytics Stories app in SAP IBP enables users to create interactive dashboards and visualizations. Its capabilities enhance decision-making by integrating data insights.
* Option A: Links to external URLs can be embedded in the storyThis is correct. Analytics Stories support embedding hyperlinks to external resources (e.g., documentation, websites), enhancing context, as per SAP IBP's visualization features.
* Option B: The story is structured around one responsive pageThis is incorrect. Stories can span multiple pages or tabs, not just

one, allowing complex layouts. The responsive design adapts to devices, but it's not limited to a single page.
* Option C: Specific chart and table filters can be applied within the storyThis is correct. Users can apply filters to charts and tables (e.g., by Product, Time) within the story, enabling dynamic data exploration, a core capability in SAP IBP's analytics tools.
* Option D: Stories must be re-created in each SAP IBP environmentThis is correct. Analytics Stories are environment-specific (e.g., test vs. production) and cannot be transported directly. They must be recreated or exported/imported manually, per SAP IBP's architecture.
Thus, A, C, and D are main capabilities of Manage Analytics Stories, per SAP IBP's official documentation.
(Note: Original answer A, C, D matches corrected analysis.)

NEW QUESTION # 50

You need to create time periods for the time profile in a planning area. What should you be aware of when running the Create Time Periods application job?

- A. A time profile has to be activated so that the application job can proceed
- B. The planning area to which the time profile is assigned must be active
- C. This application job can also be triggered from SAP IBP, add-in for Microsoft Excel
- D. It is mandatory to specify the planning area in the Parameter Section of the application job

Answer: A

Explanation:
The Create Time Periods job in SAP IBP (via the Application Jobs app) generates time periods (e.g., weeks, months) for a time profile, a prerequisite for planning.
* Option A: The planning area to which the time profile is assigned must be activeThis is incorrect.
The planning area doesn't need to be active during time period creation; the job operates on the time profile independently.
* Option B: This application job can also be triggered from SAP IBP, add-in for Microsoft Excel This is incorrect. The job is triggered via the Application Jobs app (Fiori), not the Excel add-in, which focuses on planning views.
* Option C: A time profile has to be activated so that the application job can proceedThis is correct.
The time profile must be activated (i.e., saved and valid) before the job can generate periods, ensuring configuration readiness, per SAP IBP's time profile documentation.
* Option D: It is mandatory to specify the planning area in the Parameter Section of the application jobThis is incorrect. The job requires the time profile ID, not the planning area, as parameters, though the time profile is linked to a planning area.
Thus, C is the key awareness point, per SAP IBP's official job requirements.

NEW QUESTION # 51

You need to make manual adjustments to your S&OP plan. Which are possible ways of making these changes? Note: There are 2 correct answers to this question.

- A. Leveraging the web-based planning capability
- B. Using Microsoft Excel planning views
- C. Using Driver-Based Planning
- D. Leveraging the functionality of SAP Work Zone

Answer: A,B

Explanation:
Manual adjustments to an S&OP plan in SAP IBP involve editing key figures, supported by specific UIs, per SAP IBP's S&OP documentation.
* Option A: Leveraging the web-based planning capabilityThis is correct. The Planner Workspaces app (web-based) allows manual adjustments to key figures (e.g., demand plans), a standard feature, per SAP IBP's UI capabilities.
* Option B: Leveraging the functionality of SAP Work ZoneThis is incorrect. SAP Work Zone is a collaboration platform, not a planning tool for S&OP adjustments in IBP.
* Option C: Using Microsoft Excel planning viewsThis is correct. The Excel add-in's planning views are the primary interface for manual S&OP adjustments (e.g., editing Consensus Demand), per SAP IBP's documentation.
* Option D: Using Driver-Based PlanningThis is incorrect. Driver-Based Planning is a methodology (e.
g., linking demand to drivers), not a direct manual adjustment method.
Thus, A and C are valid ways, per SAP IBP's official planning interfaces.

NEW QUESTION # 52

What is a prerequisite for modeling outsourced manufacturers with production capacity using the Supply Optimizer?

- A. Model target inventory and stocks at the outsourced manufacturing location
- B. Model relative production costs across internal locations and outsourced manufacturing locations
- C. Use production lead times and offsets to manage components at the outsourced manufacturing location
- D. Ensure that the outsourced manufacturing locations have a separate subnetwork

Answer: B

Explanation:

The Supply Optimizer in SAP IBP models outsourced manufacturers as Locations with production capacity, optimizing costs across the network, per SAP IBP's supply planning documentation.
* Option A: Model relative production costs across internal locations and outsourced manufacturing locationsThis is correct. The optimizer requires cost data (e.g., production costs per unit) for internal and outsourced locations to decide where to produce, a key prerequisite, per SAP IBP' s cost optimization rules.
* Option B: Use production lead times and offsets to manage components at the outsourced manufacturing locationThis is incorrect. Lead times and offsets are used, but they're not a prerequisite specific to capacity modeling; they're general planning inputs.
* Option C: Ensure that the outsourced manufacturing locations have a separate subnetworkThis is incorrect. Subnetworks optimize runtime, but they're not required for modeling outsourced capacity; the optimizer works across one network.
* Option D: Model target inventory and stocks at the outsourced manufacturing locationThis is incorrect. Inventory targets are optional and not a prerequisite for capacity modeling in the optimizer.
Thus, A is the prerequisite, per SAP IBP's official optimizer requirements.

NEW QUESTION # 53

What function would you use to configure a year-to-date calculation?

- A. Cumulative Aggregation
- B. Last Period Aggregation
- C. Dynamic Rolling Aggregation
- D. Rolling Aggregation

Answer: A

Explanation:

A year-to-date (YTD) calculation in SAP IBP sums values from the start of the year to the current period, a common time-series requirement.
* Option A: Rolling AggregationThis is incorrect. Rolling aggregation typically refers to a moving window (e.g., last 3 months), not a fixed YTD scope.
* Option B: Last Period AggregationThis is incorrect. Last period aggregation focuses on the most recent period, not a cumulative YTD total.
* Option C: Cumulative AggregationThis is correct. The CUMULATE function in SAP IBP (e.g., KF2
= CUMULATE(KF1)) calculates a running total from the start of the horizon (e.g., year) to each period, ideal for YTD, per SAP IBP's calculation documentation.
* Option D: Dynamic Rolling AggregationThis is incorrect. Dynamic rolling implies a flexible window, not a fixed YTD accumulation.
Thus, C is the correct function for a YTD calculation, per SAP IBP's official capabilities.

NEW QUESTION # 54

......

The SAP Certified Associate - SAP IBP for Supply Chain C-IBP-2502 exam is a valuable credential that will assist you to advance your career. To pass the C-IBP-2502 exam is not an easy job. It always gives tough times to their candidates. The best C-IBP-2502 Exam Preparation strategy along with the DumpExam C-IBP-2502 exam practice test questions can help you to crack the SAP C-IBP-2502 exam easily.
