Ace CheckPoint 156-315.81 Exam Instantly with This Tried-and-Tested Method

You may strand on some issues at sometimes, all confusions will be answered by the bountiful contents of our 156-315.81 exam materials. Wrong choices may engender wrong feed-backs, we are sure you will come a long way by our 156-315.81 practice questions. In fact, a lot of our loyal customers have became our friends and only relay on our 156-315.81 study braindumps. As they always said that our 156-315.81 learning quiz is guaranteed to help them pass the exam.

The CheckPoint 156-315.81 exam consists of multiple-choice questions and is conducted online. The duration of the exam is 90 minutes, during which candidates are required to answer 90 questions. To pass the exam, candidates must score a minimum of 70%. 156-315.81 Exam is available in English, Chinese, Japanese, and Korean languages.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q558-Q563):

NEW QUESTION # 558

You want to gather and analyze threats to your mobile device. It has to be a lightweight app. Which application would you use?

- A. Check Point Capsule Cloud
- B. SmartEvent Client Info
- C. SecuRemote
- D. Check Point Protect

Answer: D

Explanation:

Explanation

Check Point Protect is a lightweight app that can be used to gather and analyze threats to your mobile device. It provides real-time threat intelligence, device posture assessment, and secure browsing protection³.

The other applications are either not designed for mobile devices, or do not offer threat analysis features.

NEW QUESTION # 559

When Dynamic Dispatcher is enabled, connections are assigned dynamically with the exception of:

- A. Threat Emulation
- B. QOS
- C. VoIP
- D. HTTPS

Answer: C

Explanation:

Explanation

When Dynamic Dispatcher is enabled, it dynamically assigns connections, but there are exceptions. The exception mentioned in the question is:

VoIP (Option D): VoIP connections are an exception when Dynamic Dispatcher is enabled. They are not assigned dynamically but follow a different rule set to ensure quality and reliability for VoIP traffic.

The other options, Threat Emulation (Option A), HTTPS (Option B), and QoS (Option C), are dynamically assigned when Dynamic Dispatcher is enabled.

NEW QUESTION # 560

In Advanced Permanent Tunnel Configuration, to set the amount of time the tunnel test runs without a response before the peer host is declared 'down', you would set the _____?

- A. life sign polling interval
- B. life sign timeout
- C. life_sign_timeout
- D. life_sign_polling_interval

Answer: C

Explanation:

In Advanced Permanent Tunnel Configuration, the life_sign_timeout parameter sets the amount of time the tunnel test runs without a response before the peer host is declared 'down'. The life_sign_polling_interval parameter sets the interval between each tunnel test packet sent to the peer host.

NEW QUESTION # 561

What is the purpose of Priority Delta in VRRP?

- A. When an Interface fail, Effective Priority = Priority - Priority Delta
- B. When a box up, Effective Priority = Priority + Priority Delta
- C. When a box fail, Effective Priority = Priority - Priority Delta
- D. When an Interface is up, Effective Priority = Priority + Priority Delta

Answer: A

Explanation:

Each instance of VRRP running on a supported interface may monitor the link state of other interfaces. The monitored interfaces do

not have to be running VRRP.

If a monitored interface loses its link state, then VRRP will decrement its priority over a VRID by the specified delta value and then will send out a new VRRP HELLO packet. If the new effective priority is less than the priority a backup platform has, then the backup platform will begin to send out its own HELLO packet.

Once the master sees this packet with a priority greater than its own, then it releases the VIP.

NEW QUESTION # 562

What are the two high availability modes?

- A. Active and Standby
- **B. New and Legacy**
- C. Load Sharing and Legacy
- D. Traditional and New

Answer: B

Explanation:

The two high availability modes are New and Legacy. High availability (HA) is a feature that allows you to create a cluster of two or more Security Gateways that act as a single entity to provide redundancy and reliability for your network traffic. HA ensures that if one Security Gateway fails or becomes unavailable, another Security Gateway in the cluster takes over its role seamlessly and continues to process the traffic. HA also provides load balancing and synchronization of the cluster members. The New mode is the recommended mode for HA clusters, as it provides better performance, scalability, and stability than the Legacy mode. The New mode uses the ClusterXL mechanism to manage the cluster members and the state synchronization. The Legacy mode uses the High Availability Security Extension (HASE) mechanism to manage the cluster members and the state synchronization. The Legacy mode is supported for backward compatibility with older versions of Check Point products, but it has some limitations and disadvantages compared to the New mode.

NEW QUESTION # 563

.....

As the rapid development of the world economy and intense competition in the international, the leading status of knowledge-based economy is established progressively. A lot of people are in pursuit of a good job, a 156-315.81 certification, and a higher standard of life. It is very important for us to keep pace with the changeable world and update our knowledge if we want to get a good job, a higher standard of life and so on. First, we need to get a good 156-315.81 Quiz prep. Because we only pass 156-315.81 exam and get a certificate, we can have the chance to get a decent job and make more money.
