Salesforce CRT-450 certification is a globally recognized credential for aspiring Salesforce developers. It is designed to validate the skills of developers who have a broad understanding of the Salesforce platform and the ability to develop custom applications using Apex and Visualforce. Salesforce Certified Platform Developer I certification is suitable for developers who are looking to enhance their career opportunities and demonstrate their expertise in Salesforce development.

Salesforce CRT-450 exam covers a wide range of topics related to the Salesforce platform, including Apex programming language, Salesforce data model, Salesforce security model, and Salesforce Lightning components. CRT-450 Exam is designed to test your ability to develop custom applications on the Salesforce platform using best practices and industry standards. CRT-450 exam consists of 60 multiple-choice questions and you have 105 minutes to complete the exam. To pass the exam, you need to score at least 65%. Successful completion of CRT-450 exam leads to the Salesforce Certified Platform Developer I certification, which is widely recognized in the industry and can help you stand out in the job market.

Salesforce Certified Platform Developer I Sample Questions (Q64-Q69):

NEW QUESTION # 64

A developer must create a `CreditCardPayment` class that provides an implementation of an existing `Payment` class.

Which is the correct implementation?

- A.
- B.
- C.
- D.

Answer: A

NEW QUESTION # 65

A developer has an integer variable called `maxAttempts`. The developer needs to ensure that once `maxAttempts` is initialized, it preserves its value for the length of the Apex transaction; while being able to share the variable's state between trigger executions. How should the developer declare `maxAttempts` to meet these requirements?

- A. Declare `maxAttempts` as a private static variable on a helper class.
- B. Declare `maxAttempts` as a variable on a helper class.
- C. Declare `maxAttempts` as a constant using the `static` and `final` keywords.
- D. Declare `maxAttempts` as a member variable on the trigger definition.

Answer: C

NEW QUESTION # 66

A developer created a new after insert trigger on the Lead object that creates Task records for each Lead.

After deploying to production, an existing outside integration that inserts Lead records in batches to Salesforce is occasionally reporting total batch failures being caused by the Task insert statement. This causes the integration process in the outside system to stop, requiring a manual restart.

Which change should the developer make to allow the integration to continue when some records in a batch cause failures due to the Task insert statement, so that manual restarts are not needed?

- A. Use the Database method with `allow one set to false`.
- B. Deactivate the trigger before the integration runs.
- C. Remove the Apex class from the integration user's profile.
- D. Use a try-catch block after the insert statement.

Answer: A

NEW QUESTION # 67
