# Reliable Exam OGEA-102 Simulations & Perfect The Open Group Certification Training - The Best The Open Group TOGAF Enterprise Architecture Part 2 Exam

The team appointed by the Dumpcollection is dedicated and hardworking and strives hard to refine the The Open Group OGEA-102 dumps and make them meet the standards set by the The Open Group. It does so by taking the valuable suggestions of more than 90,000 professionals in this field. The unique, trustworthy, and error-free material will turn your preparation for the The Open Group OGEA-102 certification exam productive, organized, and helpful.

If you search test practice questions you can find us which is the leading position in this field or you may know us from other candidates about our high-quality OGEA-102 training materials as every year thousands of candidates choose us and gain success for their exams. If you want to choose reliable and efficient Latest OGEA-102 Questions and answers, we will be your best choice as we have 100% pass rate for OGEA-102 exams. Many candidates prefer simulator function of our OGEA-102 training materials. And our OGEA-102 exam questions won't let you down.

>> Exam OGEA-102 Simulations <<

Maximize Your Success with Dumpcollection Customizable OGEA-102 TOGAF Enterprise Architecture Part 2 Exam Practice Test

The The Open Group OGEA-102 exam questions in the web-based practice test are real and accurate. This TOGAF Enterprise Architecture Part 2 Exam (OGEA-102) practice exam is compatible with Mac, Linux, iOS, Android, and Windows. Likewise, no particular software installation or plugin is required because it is a browser-based TOGAF Enterprise Architecture Part 2 Exam (OGEA-102) practice exam. Chrome, Internet Explorer, Firefox, Safari, Opera, and all the major browsers support the web-based TOGAF Enterprise Architecture Part 2 Exam (OGEA-102) practice exam.

The Open Group TOGAF Enterprise Architecture Part 2 Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
Please read this scenario prior to answering the question
You are the Lead Enterprise Architect at a major agribusiness company. The company's main annual harvest is lentils, a highly valued food grown worldwide. The lentil parasite, broomrape, has been an increasing concern for many years and is now becoming resistant to chemical controls. In addition, changes in climate favor the propagation and growth of the parasite. As a result, the

parasite cannot realistically be exterminated, and it has become pandemic, with lentil yields falling globally.

The CEO appreciates the seriousness of the situation and has set out a change in direction that is effectively a new business for the company. There are opportunities for new products, and new markets. The company will use the fields for another harvest and will cease to process third-party lentils. Thus, the target market will change, and the end-products will be different and more varied. This is a major decision and the CEO has stated a desire to repurpose rather than replace so as to manage the risks and limit the costs.

The company has a mature Enterprise Architecture practice based in its headquarters and uses the TOGAF standard as the method and guiding framework. The practice has an established Architecture Capability, and uses iteration for architecture development. The CIO is the sponsor of the activity.

The CIO has assigned the Enterprise Architecture team to this activity. At this stage there is no shared vision, or requirements.

Refer to the scenario

You have been asked to propose the best approach for architecture development to realize the CEO's change in direction for the company.

Based on the TOGAF standard which of the following is the best answer?

- A. You propose that this engagement define the baseline Technology Architecture first in order to assess the current infrastructure capacity and capability for the company. Then the focus should be on transition planning and incremental architecture deployment.
  This will identify requirements to ensure that the projects are sequenced in an optimal fashion so as to realize the change.
- B. You propose that the team focus its iteration cycles on architecture development by going through the architecture definition phases (B-D) with a baseline first approach.This will support the change in direction as stated by the CEO. It will ensure that the change can be defined in a structured manner and address the requirements needed to realize the change.
- C. You propose that the team focus on architecture definition, with emphasis on defining the change parameters to support this new business strategy that the CEO has identified. Once understood, the team will be in the best position to identify the requirements, drivers, issues, and constraints for the change. You would ensure that the architecture development addresses non-functional requirements to assure that the target architecture is robust and secure.
- D. You propose that the priority is to understand and bring structure to the definition of the change. The team should focus iteration cycles on a baseline first approach to architecture development, and then transition planning. This will identify what needs to change in order to transition from the baseline to the target, and can be used to work out in detail what the shared vision is for the change.

Answer: D

Explanation:

Based on the TOGAF standard, this answer is the best approach for architecture development to realize the CEO's change in direction for the company. The reason is as follows:

The scenario describes a major business transformation that requires a clear understanding of the current and future states of the enterprise, as well as the gaps and opportunities for change. Therefore, the priority is to understand and bring structure to the definition of the change, rather than focusing on the implementation details or the technology aspects.

The team should use the TOGAF ADM as the method and guiding framework for architecture development, and adapt it to suit the specific needs and context of the enterprise. The team should also leverage the existing Architecture Capability and the Architecture Repository to reuse and integrate relevant architecture assets and resources.

The team should focus iteration cycles on a baseline first approach to architecture development, which means starting with the definition of the Baseline Architecture in each domain (Business, Data, Application, and Technology), and then defining the Target Architecture in each domain. This will help to identify the current and desired states of the enterprise, and to perform a gap analysis to determine what needs to change in order to achieve the business goals and objectives.

The team should then focus on transition planning, which involves identifying and prioritizing the work packages, projects, and activities that will deliver the change. The team should also create an Architecture Roadmap and an Implementation and Migration Plan that will guide the execution and governance of the change.

The team should use the Architecture Vision phase and the Requirements Management phase to work out in detail what the shared vision is for the change, and to capture and validate the stakeholder requirements and expectations. The team should also use the Architecture Governance framework to ensure the quality, consistency, and compliance of the architecture work.

NEW QUESTION # 28

Scenario:

You are working as an Enterprise Architect within a company providing legal services. The company operates in many countries and has a complicated structure. Every office must follow the local regulations in their country.

The company's Enterprise Architecture (EA) department has been operating for several years and has mature, well-developed architecture governance and development processes based on the TOGAF standard. In addition to the EA program, the company has several management frameworks, including business planning, project/portfolio management, and operations management. The Architecture Board includes representatives from all parts of the company.

The Chief Information Officer (CIO) is the sponsor of the Enterprise Architecture program. The CIO has actively encouraged architecting with agility within the EA department as the preferred approach for projects. The CIO has given approval for a Request for Architecture Work to explore the adoption of an AI-powered system for managing legal cases and financial processes.

Senior management has become more concerned about business performance, especially with the advancements in Artificial Intelligence (AI). Many of the company's competitors have started using AI to assist with legal strategies, streamline processes, and boost productivity. One of the most important benefits AI has for the business is its ability to increase accuracy and minimize mistakes.

Some of the top managers are worried about a change in the way of working, and if it will achieve the business goals. Their staff also fear that management will use the AI system to measure their performance. The CIO wants to know how to address these concerns and reduce risks.

The new system is expected to guide legal professionals and analysts on which tasks to focus on. The main goals are to improve productivity and make better use of staff. In addition, the CIO hopes these changes will lead to higher customer satisfaction.

Refer to the scenario:

You have been asked to respond to the Chief Information Officer (CIO) recommending an approach that would enable the development of an architecture that addresses the concerns of the top managers and the multiple branches in different parts of the company.

Based on the TOGAF standard, which of the following is the best answer?

- A. You recommend that models be created for each of the Business, Application, and Technology architectures. These can be used to ensure that the system will be compliant with the local regulations for each operating entity. This ensures that all necessary data and detail is addressed. A formal review should be held with the stakeholders to verify that their concerns have been properly addressed by the models.
- B. You recommend that an analysis of the stakeholders is undertaken. This will allow the architects to define groups of partners (the stakeholders) who have common concerns and include development of a Stakeholder Map. The concerns and relevant views should then be defined for each group and recorded in the Architecture Vision document. To reduce risk, you include a requirement that there be progressive development of the target architecture to get regular feedback.
- C. You recommend creation of a set of business models that can be applied uniformly across all AI-related architecture projects. These should be developed in a portable format to ensure maximum portability across the many tools used in the firm. Each architecture should then be defined based on this fixed set of models. All concerned stakeholders can then examine the models to ensure that their needs have been addressed.
- D. You recommend that a Communications Plan be created to address the key stakeholders, particularly influential partners. This plan should include a report summarizing the key features of the architecture with respect to each location and reflect the stakeholders' requirements. You will check with each key stakeholder that their concerns have been addressed. Risk mitigation should be explicitly addressed as a component of the architecture being developed.

Answer: B

Explanation:
The correct answer is B, as it aligns with TOGAF's stakeholder management approach, ensuring that stakeholder concerns are captured and addressed iteratively throughout the architecture development process.
Analysis of the Correct Answer (Option B):
Stakeholder Analysis and Mapping
The scenario highlights that top managers and staff are worried about the changes AI will bring.
TOGAF recommends stakeholder analysis early in the ADM process to ensure that concerns, expectations, and risks are documented.
Creating a Stakeholder Map groups stakeholders by common concerns, allowing architects to develop tailored viewpoints.
Recording Concerns in the Architecture Vision Document
The Architecture Vision (ADM Phase A) serves as a high-level guiding document.
Capturing stakeholder concerns in the Vision document ensures alignment between business goals and technology implementation.
Iterative Development and Regular Feedback
The scenario describes an AI-powered system with major business impacts, so incremental validation is necessary.
TOGAF emphasizes progressive development to manage risk and validate requirements continuously.
Regular feedback loops help mitigate resistance from top managers and staff.
Why Other Options Are Incorrect?
Option A: Creating Models for Business, Application, and Technology Architectures Incorrect because while compliance is important, it does not address stakeholder concerns directly.
The scenario is about ensuring buy-in from top managers and employees, not just regulatory compliance.
Option C: Using Uniform Business Models Across AI Projects
Incorrect because a one-size-fits-all model does not allow for regional and functional differences within the company.
The scenario emphasizes the need to address specific concerns of top managers and different locations, which requires stakeholder-specific customization.

Option D: Creating a Communications Plan
Incorrect because communication alone does not resolve stakeholder concerns.
While communication is useful, the architecture development process should include stakeholder engagement and progressive validation, not just reporting.

NEW QUESTION # 29
Please read this scenario prior to answering the question
You are the Chief Enterprise Architect at a large food service company specializing in sales to trade and wholesale, for example, restaurants and other food retailers.
One of your company's competitors has launched a revolutionary product range and is running a very aggressive marketing campaign. Your company's resellers are successively announcing that they are not interested in your company's products and will sell your competitor's.
The CEO has stated there must be significant change to address the situation. He has made it clear that new markets must be found for the company's products, and that the business needs to pivot, and address the retail market as well as the existing wholesale market.
A consideration is the company's ability and willingness to change its business model, and if it is a temporary or permanent change. An additional risk factor is one of culture. The company has been used to a stable business with a reasonably well known and settled client base - all with its own local understandings and practices.
The CEO is the sponsor of the EA program within the company. You have been engaged with the sales, logistics, production, and marketing teams, enabling the architecture activity to start. An Architecture Vision, Architecture Principles, and Requirements have all been agreed. As you move forward to develop a possible Target Architecture you have identified that some of the key stakeholders' preferences are incompatible. The incompatibilities are focused primarily on time-to-market, cost savings, and the need to bring out a fully featured product range, but there are additional factors.
Refer to the scenario
You have been asked how you will address the incompatibilities between key stakeholder preferences.
Based on the TOGAF standard which of the following is the best answer?

- A. You would use the Architecture Vision, Principles, and Requirements to define a set of criteria for alternatives and create a set of architecture views to illustrate the impact of the alternative Target Architectures. You would identify the impact on planned projects. You would understand the strengths and weaknesses of the alternatives. You would conduct a formal stakeholder review to decide which alternative to move forward with. You will determine the funding required.
- B. You would seek to understand value preferences and priorities of the stakeholders. You would develop alternative Target Architectures, highlighting the gaps between current state and the alternatives. You would consider combining features from one or more alternatives in collaboration with the stakeholders. A formal stakeholder review should then be held to decide which alternative is fit for purpose and should be moved forward with. You will then secure the funding required.
- C. You recommend that since the CEO has stated that the company must pivot, it is better to compromise on a full product range rather than time-to-market. You would develop just enough of the Target Architecture to demonstrate fitness of the proposed approach. You would limit the description to just where there is a gap between the current baseline. You would seek approval by the stakeholders to move forward with developing the Target Architecture in detail.
- D. You would review the Stakeholder Map and ensure that you have addressed and represented the concerns of all department heads. You will involve them in resolving the incompatibilities. The Communications Plan should include a report that summarizes the key features of the architecture with and how incompatibilities were resolved to reflects the stakeholders' requirements. You will check with each key stakeholder they are satisfied with how the incompatibilities have been resolved.

Answer: A

Explanation:
According to the TOGAF standard, the Target Architecture is the description of a future state of the architecture being developed for an organization. It should be aligned with the Architecture Vision, Principles, and Requirements that have been agreed with the stakeholders. To address the incompatibilities between key stakeholder preferences, the TOGAF standard recommends creating and evaluating multiple alternative Target Architectures that meet different sets of criteria. These criteria should reflect the value preferences and priorities of the stakeholders, as well as the business drivers and objectives. The alternative Target Architectures should be illustrated using a set of architecture views that show the impact of each alternative on the business, data, application, and technology domains. The impact on planned projects should also be identified and analyzed. The strengths and weaknesses of each alternative should be understood and documented. A formal stakeholder review should then be conducted to decide which alternative is the most fit for purpose and should be moved forward with. The funding required for implementing the chosen

alternative should also be determined and secured. Reference:

NEW QUESTION # 30
Please read this scenario prior to answering the question
You are working as the Chief Enterprise Architect within a law firm specializing in personal injury cases. Many of the firm's
competitors have improved their litigation strategies, and efficiency by streamlining their processes using Artificial Intelligence {AI).
The CIO has approved a Request for Architecture Work to examine the use of Machine Learning in defining a new AI-driven
litigation and finance process for the firm. This process would instruct the lawyers and analysts as to what tasks and portfolio they
should work on. The key objectives are to increase task profitability, maximize staff utilization, and increase individual profitability.
The CIO has emphasized that the architecture should enable the fast implementation of continuous Machine Learning. The solution
will need to be constantly measured for delivered value and be quickly iterated to success.
Some of the partners have expressed concerns about letting the AI make the decisions, others about the risks associated with use of
it for the type of service they deliver. The CIO wants to know if these concerns can be addressed, and how risks will be covered by
a new architecture enabling AI and Machine Learning.
Refer to the scenario
You have been asked to respond to the CIO recommending an approach that would enable the development of an architecture that
addresses the concerns of the CIO and the concerns of the partners.
Based on the TOGAF standard which of the following is the best answer?

- A. You recommend that a Communications Plan be created to address the key stakeholders, the most powerful and influential
partners. This plan should include a report that summarizes the key features of the architecture reflecting their requirements.
You will check with each key stakeholder that their concerns are being addressed. Risk mitigation and agility will be explicitly
addressed as a component of the architecture being developed.
- B. You recommend creation of a set of business models that can be applied uniformly across all architecture projects. The
stakeholders will be trained to understand the business models to ensure they can see that their concerns are being addressed.
Risk will be addressed once the Security Architecture is developed, which will happen later to avoid slowing down the agility
required by the CIO.
- C. You recommend that an analysis of the stakeholders is undertaken resulting in documenting the stakeholders and their
concerns in a Stakeholder Map. The concerns and relevant views should then be defined for each group and recorded in the
Architecture Vision document. The requirements will include risk mitigation through regular assessments. This will also allow a
supervised agile implementation of the continuous Machine Learning.
- D. You recommend that all possible models be created for each candidate architecture that will enable the AI and Machine
Learning solution. This ensures that all the necessary data and detail is addressed. A formal review should be held with the
stakeholders to verify that their concerns have been properly addressed by the models. Agility will be considered during
Phase G Implementation Governance.

Answer: C

Explanation:
A Stakeholder Map is a technique that can be used to identify and classify the stakeholders of the architecture work, and to
document their key interests, requirements, and concerns. A stakeholder is any person, group, or organization that has a stake in the
outcome of the architecture work, such as the sponsor, the client, the users, the suppliers, the regulators, or the competitors. A
Stakeholder Map can help to understand the needs and expectations of the stakeholders, and to communicate and engage with them
effectively1 The steps for creating a Stakeholder Map are:
Identify the stakeholders of the architecture work, using various sources and methods, such as interviews, surveys, workshops, or
existing documents.
Classify the stakeholders according to their roles, responsibilities, and relationships, using various criteria and dimensions, such as
power, influence, interest, attitude, or impact.
Define the concerns and relevant views for each stakeholder group, using various techniques, such as business scenarios, use cases,
or value propositions. A concern is a key interest or issue that is relevant to the stakeholder, such as a goal, a problem, a need, or a
risk. A view is a representation of the system of interest from the perspective of one or more stakeholders and their concerns.
Record the stakeholders and their concerns in a Stakeholder Map, which shows the mapping between the stakeholder groups, the
concerns, and the views. The Stakeholder Map also shows the dependencies, assumptions, and issues related to each stakeholder
and concern.
Therefore, the best answer is B, because it recommends the approach that would enable the development of an architecture that

addresses the concerns of the CIO and the partners, using the Stakeholder Map technique. The answer covers the following aspects:

An analysis of the stakeholders is undertaken, which involves identifying, classifying, and defining the stakeholders and their concerns.

The stakeholders and their concerns are documented in a Stakeholder Map, which provides a clear and comprehensive picture of the stakeholder landscape and their interests.

The concerns and relevant views are recorded in the Architecture Vision document, which is the output of Phase A: Architecture Vision of the Architecture Development Method (ADM), which is the core process of the TOGAF standard that guides the development and management of the enterprise architecture. The Architecture Vision defines the scope and approach of the architecture work, and establishes the business goals and drivers that motivate the architecture work. The Architecture Vision also involves obtaining the approval and commitment of the sponsors and other key stakeholders, and initiating the Architecture Governance process2 The requirements include risk mitigation through regular assessments, which involves identifying, analyzing, and evaluating the risks that may affect the architecture, and determining the appropriate measures or actions to prevent, reduce, or mitigate the risks. Risk mitigation can also involve monitoring and reviewing the risk situation, and communicating and reporting the risk status and actions3 This approach also allows a supervised agile implementation of the continuous Machine Learning, which involves applying agile principles and practices to the architecture development and implementation, such as iterative and incremental delivery, frequent feedback, collaboration, and adaptation. A supervised agile implementation can help to ensure the quality, value, and alignment of the architecture, and to respond to the changing needs and expectations of the stakeholders.

NEW QUESTION # 31

Please read this scenario prior to answering the question

You are the Lead Enterprise Architect at a major agribusiness company. The company's main annual harvest is lentils, a highly valued food grown worldwide. The lentil parasite, broomrape, has been an increasing concern for many years and is now becoming resistant to chemical controls. In addition, changes in climate favor the propagation and growth of the parasite. As a result, the parasite cannot realistically be exterminated, and it has become pandemic, with lentil yields falling globally.

The CEO appreciates the seriousness of the situation and has set out a change in direction that is effectively a new business for the company. There are opportunities for new products, and new markets. The company will use the fields for another harvest and will cease to process third-party lentils. Thus, the target market will change, and the end-products will be different and more varied. This is a major decision and the CEO has stated a desire to repurpose rather than replace so as to manage the risks and limit the costs.

The company has a mature Enterprise Architecture practice based in its headquarters and uses the TOGAF standard as the method and guiding framework. The practice has an established Architecture Capability, and uses iteration for architecture development. The CIO is the sponsor of the activity.

The CIO has assigned the Enterprise Architecture team to this activity. At this stage there is no shared vision, or requirements.

Refer to the scenario

You have been asked to propose the best approach for architecture development to realize the CEO's change in direction for the company.

Based on the TOGAF standard which of the following is the best answer?

- A. You propose that this engagement define the baseline Technology Architecture first in order to assess the current infrastructure capacity and capability for the company. Then the focus should be on transition planning and incremental architecture deployment.
  This will identify requirements to ensure that the projects are sequenced in an optimal fashion so as to realize the change.
- B. You propose that the team focus its iteration cycles on architecture development by going through the architecture definition phases (B-D) with a baseline first approach.
  This will support the change in direction as stated by the CEO. It will ensure that the change can be defined in a structured manner and address the requirements needed to realize the change.
- C. You propose that the team focus on architecture definition, with emphasis on defining the change parameters to support this new business strategy that the CEO has identified. Once understood, the team will be in the best position to identify the requirements, drivers, issues, and constraints for the change. You would ensure that the architecture development addresses non-functional requirements to assure that the target architecture is robust and secure.
- D. You propose that the priority is to understand and bring structure to the definition of the change. The team should focus iteration cycles on a baseline first approach to architecture development, and then transition planning. This will identify what needs to change in order to transition from the baseline to the target, and can be used to work out in detail what the shared vision is for the change.

Answer: D

Explanation:
Based on the TOGAF standard, this answer is the best approach for architecture development to realize the CEO's change in direction for the company. The reason is as follows:

The scenario describes a major business transformation that requires a clear understanding of the current and future states of the enterprise, as well as the gaps and opportunities for change. Therefore, the priority is to understand and bring structure to the definition of the change, rather than focusing on the implementation details or the technology aspects.

The team should use the TOGAF ADM as the method and guiding framework for architecture development, and adapt it to suit the specific needs and context of the enterprise. The team should also leverage the existing Architecture Capability and the Architecture Repository to reuse and integrate relevant architecture assets and resources.

The team should focus iteration cycles on a baseline first approach to architecture development, which means starting with the definition of the Baseline Architecture in each domain (Business, Data, Application, and Technology), and then defining the Target Architecture in each domain. This will help to identify the current and desired states of the enterprise, and to perform a gap analysis to determine what needs to change in order to achieve the business goals and objectives.

The team should then focus on transition planning, which involves identifying and prioritizing the work packages, projects, and activities that will deliver the change. The team should also create an Architecture Roadmap and an Implementation and Migration Plan that will guide the execution and governance of the change.

The team should use the Architecture Vision phase and the Requirements Management phase to work out in detail what the shared vision is for the change, and to capture and validate the stakeholder requirements and expectations. The team should also use the Architecture Governance framework to ensure the quality, consistency, and compliance of the architecture work.

NEW QUESTION # 32

......

If you want a relevant and precise content that imparts you the most updated, relevant and practical knowledge on all the key topics of the OGEA-102 Certification Exam, no other OGEA-102study material meets these demands so perfectly as does Dumpcollection's study guides. The OGEA-102 questions and answers in these guides have been prepared by the best professionals who have deep exposure of the certification exams and the exam takers needs. The result is that Dumpcollection's study guides are liked by so many ambitious professionals who give them first priority for their exams. The astonishing success rate of Dumpcollection's clients is enough to prove the quality and benefit of the study questions of Dumpcollection.

Valid OGEA-102 Test Online: https://www.dumpcollection.com/OGEA-102_braindumps.html

The Open Group Exam OGEA-102 Simulations We devote ourselves to providing the best test questions and golden customer service, Choose the Best of Enterprise Architecture OGEA-102 Questions and Answers Offered by PassLeaders, As our Valid OGEA-102 Test Online - TOGAF Enterprise Architecture Part 2 Exam study questions can bring more professional quality service for the user, Mobile users can easily get updates and can download the The Open Group OGEA-102 material in PDF format after purchasing our material and can study it any time in their busy life when they have desire to study.

Using Excel collaboratively, You'll soon see that many actions that OGEA-102 you take in a document involve selecting text, We devote ourselves to providing the best test questions and golden customer service.

Quick and Easiest Way of Getting The Open Group OGEA-102 Certification Exam

Choose the Best of Enterprise Architecture OGEA-102 Questions and Answers Offered by PassLeaders, As our TOGAF Enterprise Architecture Part 2 Exam study questions can bring more professional quality service for the user.

Mobile users can easily get updates and can download the The Open Group OGEA-102 material in PDF format after purchasing our material and can study it any time in their busy life when they have desire to study.
