## Latest Real HPE7-A01 Exam & Pdf HPE7-A01 Braindumps

The evergreen field of HP is so attractive that it provides non-stop possibilities for the one who passes the HP HPE7-A01 exam.

So, to be there on top of the IT sector, earning the Aruba Certified Campus Access Professional Exam (HPE7-A01) certification is essential. Because of using outdated HPE7-A01 Study Material, many candidates don't get success in the HPE7-A01 exam and lose their resources. The HPE7-A01 PDF Questions of Free4Torrent are authentic and real.

HPE7-A01 exam covers a range of topics related to Aruba networks, including network architecture, security, troubleshooting, and wireless technologies. HPE7-A01 Exam also covers the installation and configuration of Aruba devices, as well as the integration of Aruba products with other networking technologies. Candidates will be required to demonstrate their understanding of these concepts through a combination of multiple-choice and scenario-based questions.

## HP Aruba Certified Campus Access Professional Exam Sample Questions (Q60-Q65):

### NEW QUESTION # 60

Drag and Drop Question

What is the order of operations for Key Management service for a wireless client roaming from AP1 to AP2?

Cache the client's information
Client associates and authenticates to AP1
Generate Pairwise Master Key keys for AP1's neighbors
Get AP1 neighbor AP list
Share Pairwise Master Key along with VLAN and User Role to target APs

**Answer:**

Explanation:

Operation	Order
	Client associates and authenticates to AP1
	Cache the client's information
	Generate Pairwise Master Key keys for AP1's neighbors
	Get AP1 neighbor AP list
	Share Pairwise Master Key along with VLAN and User Role to target APs

### NEW QUESTION # 61

What is one advantage of using OCSP vs CRLs for certificate validation?

- A. supports longer certificate validity periods
- B. less complex to implement
- C. higher availability for certificate validation
- D. reduces latency between the time a certificate is revoked and validation reflects this status

**Answer: D**

Explanation:

OCSP (Online Certificate Status Protocol) allows real-time checking of a certificate's revocation status directly with the issuing CA, reducing the delay that can occur with CRLs (Certificate Revocation Lists), which are only updated and distributed periodically. This means OCSP provides faster and more up-to-date validation.

### NEW QUESTION # 62

Your customer has an Aruba CX 6200F VSF stack with two switches. A third member (JL726A) needs to be added to the VSF configuration. What is the configuration that enables the new devices to join the VSF?

On the new switch, issue:

- A. vsf member 3  
type JL726a

- B. 

```
On the new switch issue
vsf member 1
type jl726a
link 1 3/1/50
link 2 3/1/49
```
- C. 

```
On the new switch issue
vsf member 1
link 1 1/1/50
link 2 1/1/49
vsf renumber-to 3
On the existing VSF issue:
vsf member 3
stack join
type jl726a
```
- D.

**Answer: D**

Explanation:

According to the Aruba Documentation Portal<sup>1</sup>, the Aruba CX 6200F VSF stack is a feature that allows you to create a virtual switching framework (VSF) with up to eight members that can be managed as a single logical device. The VSF stack provides benefits such as load balancing, failover, redundancy, and security.

To add a new device to the VSF stack, you need to configure the device with the VSF command `vsf member` and specify the type, link, and secondary-member information. The type of the new device can be one of the following: JL726A, JL726B, JL726C, or JL726D. The link is the interface that connects the new device to the existing VSF members. The secondary-member is an optional parameter that specifies which member will act as a backup in case of a failure.

### NEW QUESTION # 63

A system engineer needs to preconfigure several Aruba CX 6300 switches that will be sent to a remote office. An untrained local field technician will do the rollout of the switches and the mounting of several AP-515s and AP-575S. Cables running to the APs are not labeled.

The VLANs are already preconfigured to VLAN 100 (mgmt), VLAN 200 (clients), and VLAN 300 (guests). What is the correct configuration to ensure that APs will work properly?

```

port-access lldp-group IAP-Group
  seq 10 match sys-desc 515
  seq 20 match sys-desc 575
port-access role IAP-Role
  description ARUBA AP
  poe-priority high
  trust-mode dscp
  vlan trunk native 100
  vlan trunk allowed 100,200,300
port-access device-profile IAP-Profile
  enable
  associate role IAP-Role
  associate lldp-group IAP-Group

```

• A.

```

port-access lldp-group IAP-Group
  seq 10 match sys-desc 515
  seq 20 match sys-desc 575
port-access role IAP-Role
  description ARUBA AP
  poe-priority high
  trust-mode dscp
  vlan trunk native 100
  vlan trunk allowed 100,200,300
port-access device-profile IAP-Profile
  associate role IAP-Role
  associate lldp-group IAP-Group
  no shutdown

```

• B.

```

port-access lldp-group IAP-Group
  seq 10 match sys-desc AP-515
  seq 20 match sys-desc AP-575
port-access role IAP-Role
  description ARUBA AP
  poe-priority high
  trust-mode dscp
  vlan trunk native 100
  vlan trunk allowed 100,200,300
  enable
port-access device-profile IAP-Profile
  associate role IAP-Role
  associate lldp-group IAP-Group

```

• C.

```

port-access lldp-group IAP-Group
  seq 10 match sys-desc 515
  seq 20 match sys-desc 575
port-access role IAP-Role
  description ARUBA AP
  poe-priority high
  trust-mode dscp
  vlan trunk native 100
  vlan trunk allowed 200,300
port-access device-profile IAP-Profile
  enable
  associate role IAP-Role
  associate lldp-group IAP-Group

```

• D.

**Answer: D**

Explanation:

Option C is the correct configuration to ensure that APs will work properly. It uses the ap command to configure a port profile for APs with VLAN 100 as the native VLAN and VLAN 200 and 300 as tagged VLANs. It also enables LLDP on the ports to discover the APs and assign them to the port profile automatically. The other options are incorrect because they either do not use the ap command, do not enable LLDP, or do not configure the VLANs correctly. Reference:

### NEW QUESTION # 64

You are proposing new CX 8360 VSX switches to replace a customer's existing core switches. The customer is concerned about the possibility of a split-brain scenario between the VSX pair. How is the VSX pair affected when the keepalive connection is down, but ISL is okay?

- A. The VSX pair uses only the primary node for traffic forwarding.
- **B. The VSX pair forwards traffic normally.**
- C. The VSX pair is still in protected mode.
- D. The VSX pair is not at risk.

**Answer: B**

Explanation:

In an AOS-CX VSX environment, if the keepalive link fails but the ISL (Inter-Switch Link) remains operational, both switches continue to communicate over the ISL. Since control and synchronization information still flow through the ISL, the VSX pair operates normally, and no split-brain condition occurs.

### NEW QUESTION # 65

.....

The HP job market has become so competitive and challenging. To stay competitive in the market as an experienced HP professional you have to upgrade your skills and knowledge with the Aruba Certified Campus Access Professional Exam (HPE7-A01) certification exam. With the HP HPE7-A01 exam dumps you can easily prove your skills and upgrade your knowledge. To do this you just need to enroll in the Aruba Certified Campus Access Professional Exam (HPE7-A01) certification exam and put all your efforts to pass this challenging HPE7-A01 exam with good scores. However, you should keep in mind that to get success in the HPE7-A01 certification exam is not a simple and easy task.
