Fortinet NSE7_SSE_AD-25 PDF Guide & NSE7_SSE_AD-25 New Dumps Files

Before making a final purchase decision, customers of RealVCE can download a free demo to test the validity of the Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) exam questions we offer. If the NSE7_SSE_AD-25 certification test's topics change after you have purchased our NSE7_SSE_AD-25 Dumps, we will provide you with free updates for up to 365 days. We guarantee the authenticity of our test questions and pledge to help you prepare for Fortinet NSE7_SSE_AD-25 exam quickly and cost-effectively.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q61-Q66):

NEW QUESTION # 61

Security Profile Group

The screenshot displays four security profile configurations:

- Antivirus:** Shows inspected protocols: HTTP, SMTP, POP3, IMAP, FTP, and CIFS, all with green checkmarks indicating they are active.
- Web Filter With Inline-CASB:** Shows a list of domains and their filter actions:

Domain	Count	Filter	Count
www.eicar.org	80	Allow	0
5f3c395.com19.de	50	Block	0
www.eicar.com	19	Exempt	0
encrypted-topdigital.com	9	Monitor	93
ocsp.digicert.com	8	Warning	0
		Disable	0
		Inline-CASB Headers	1
- Intrusion Prevention:** Shows a message: "Recommended: Scanning traffic for all known threats and applying the recommended settings. Disabled".
- SSL Inspection:** Shows a threat count of 734 for 'ssl-anomaly'. Under 'Deep Inspection', it shows:
 - SSL connections are decrypted to allow for inspection of the contents.
 - Exempt Hosts: 1
 - Exempt URL Categories: 2

The configuration details for the security profile are as follows:

- Name:** Web Traffic
- Source Scope:** All, VPN Users, Edge Device
- Source:** All Traffic, Specify
- User:** All VPN Users, Specify
 - VPN_Users
- Destination:** All Internet Traffic, Specify
- Service:** ALL
- Profile Group:** Default, Specify
 - SIA
- Force Certificate Inspection:**
- Action:** Accept, Deny
- Status:** Enable, Disable
- Logging Options:**
 - Log Allowed Traffic:
 - Security Events: All Sessions

A FortiSASE administrator has configured an antivirus profile in the security profile group and applied it to the internet access policy.

Remote users are still able to download the eicar.com.zip file from <https://eicar.org>.
Traffic logs show traffic is allowed by the policy.
Which configuration on FortiSASE is allowing users to perform the download?

- A. Web filter is allowing the traffic.
- B. The HTTPS protocol is not enabled in the antivirus profile.
- **C. Force certificate inspection is enabled in the policy.**
- D. IPS is disabled in the security profile group.

Answer: C

Explanation:

The core of this issue lies in the difference between Certificate Inspection and Deep SSL Inspection within the FortiSASE security framework.

* The Limitation of Certificate Inspection: When "Force Certificate Inspection" is enabled in a FortiSASE firewall policy, the system only inspects the SSL handshake—specifically the SNI (Server Name Indication) and certificate headers. It does not decrypt the actual data payload of the HTTPS session.

* Antivirus Scanning Requirements: To detect and block malicious files like the EICAR test file when they are downloaded over an encrypted HTTPS connection (such as <https://eicar.org>), the FortiSASE antivirus engine must be able to "see" inside the encrypted tunnel. This requires Deep Inspection (Full SSL Inspection), where FortiSASE acts as a "man-in-the-middle" to decrypt, scan, and then re-encrypt the traffic.

* Exhibit Analysis: The Secure Internet Access policy exhibit clearly shows the toggle for Force Certificate Inspection is enabled (set to "ON"). As specified in the Fortinet technical documentation, enabling this option forces the policy to use Certificate Inspection only, overriding any Deep Inspection settings that might be defined in the Profile Group.

* Conclusion: Because the traffic is only undergoing certificate-level inspection, the antivirus engine cannot analyze the encrypted eicar.com.zip file payload, allowing the download to proceed even though an antivirus profile is active in the group.

NEW QUESTION # 63

Your organization is currently using FortiSASE for its cybersecurity. They have recently hired a contractor who will work from the HQ office and who needs temporary internet access in order to set up a web-based point of sale (POS) system.
What is the recommended way to provide internet access to the contractor?

- A. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy.
- B. Use a tunnel policy with a contractor's user group as the source on FortiSASE to provide internet access.
- C. Use zero trust network access (ZTNA) and tag the client as an unmanaged endpoint.
- **D. Use the self-registration portal on FortiSASE to grant internet access.**

Answer: D

Explanation:

The self-registration portal is the recommended method for granting temporary internet access to contractors or guests. It provides a simple and secure way for the contractor to authenticate and access the internet without requiring full endpoint management or policy configuration.

NEW QUESTION # 64

Which two statements about FortiSASE Geofencing with regional compliance are true? (Choose two answers)

- A. The connection order for a regional compliance rule is always the security POP first, followed by the on-premises device.
- **B. If no regional compliance rule is configured, the connection is made to the closest security POP.**
- C. You can configure regional compliance on the security POP or the on-premises device, not both.
- **D. A regional compliance rule can connect only to an on-premises device or only to a security POP.**

Answer: B,D

Explanation:

FortiSASE Geofencing and Regional Compliance allow administrators to control where remote users connect based on their physical location, which is determined by the endpoint's public IP address.

* Default Connection Behavior: By default, FortiSASE uses a "best-effort" geolocation logic to ensure the lowest latency for the user. If an administrator has not configured a specific regional compliance rule for a user's country or region, FortiClient will

automatically attempt to connect to the closest available FortiSASE security PoP (Point of Presence) based on proximity.⁴

* Regional Compliance Rules: When an organization must enforce data residency or specific security routing requirements, they create Regional Compliance rules. According to the FortiSASE 25 Feature Administration Guide, these rules allow the administrator to override the default "closest PoP" behavior for specific countries.

* Connectivity Options: Within a regional compliance rule, the administrator must specify the destination for the traffic. The system provides a choice between two distinct connection types: a FortiSASE Security PoP or an On-premises device (such as a FortiGate acting as a gateway).⁵ The documentation specifies that a rule is designed to point to one of these types at a time to satisfy the compliance requirement for that specific region.

* Connection Priority: While multiple connections can be managed in a priority table, the logic for Regional Compliance is focused on directing the user to the designated compliant entry point. Option D is incorrect because the connection order is determined by the Priority and custom fail-over connections table; an administrator can manually adjust the sequence, so it is not "always" the security PoP first.

NEW QUESTION # 65

Which FortiSASE feature ensures least-privileged user access to corporate applications that are protected by an on-premises FortiGate device?

- A. zero trust network access (ZTNA)
- B. secure web gateway (SWG)
- C. remote browser isolation (RBI)
- D. cloud access security broker (CASB)

Answer: A

Explanation:

ZTNA enforces least-privileged access by verifying user identity and device posture before granting access to specific corporate applications, even when protected by an on-premises FortiGate.

NEW QUESTION # 66

.....

The RealVCE is one of the top-rated and trusted platforms that are committed to making the entire Fortinet NSE7_SSE_AD-25 exam preparation journey fast and successful. To achieve this goal the "RealVCE" is offering valid, updated, and real Fortinet NSE7_SSE_AD-25 Exam Questions. These RealVCE NSE7_SSE_AD-25 exam questions are checked and verified by qualified subject matter experts.
