## 100% PDII Exam Coverage - PDII Book Free

Through years of persistent efforts and centering on the innovation and the clients-based concept, our company has grown into the flagship among the industry. Our company struggles hard to improve the quality of our PDII exam prep and invests a lot of efforts and money into the research and innovation of our PDII Study Guide. Our brand fame in the industry is famous for our excellent PDII study guide. High quality, considerate service, constant innovation and the concept of customer first on our PDII exam questions are the four pillars of our company.

## Salesforce Platform Developer II Sample Questions (Q26-Q31):

### NEW QUESTION # 26

A developer has a requirement to query three fields (Id, Name, Type) from an Account; and first and last names for all Contacts associated with the Account.

Which option is the preferred, optimized method to achieve this for the Account named 'Ozone Electronics'?

- A.
- B.
- C.
- D.

**Answer: B**

Explanation:

The preferred, optimized method to achieve this for the Account named 'Ozone Electronics' is Option C. This option uses the

SOQL query `SELECT Id, Name, Type, (SELECT FirstName, LastName FROM Contacts) FROM Account WHERE Name = 'Ozone Electronics' LIMIT 1`. This query uses the nested query syntax to query the related Contacts for the Account, and the WHERE clause to filter the Account by the Name field. The query also uses the LIMIT clause to return only one record, which improves the performance and avoids hitting the query row limit. Option A is incorrect, as it uses the JOIN syntax, which is not supported by SOQL. Option B is incorrect, as it uses the SELECT \* syntax, which is not supported by SOQL. Option D is incorrect, as it uses two separate queries, which is less efficient and consumes more query resources than a single query. Reference: [SOQL SELECT Syntax], [SOQL Relationships], [SOQL and SOSL Reference]

#### NEW QUESTION # 27

A corporation has many different Salesforce orgs, with some different objects and some common objects, and wants to build an application that can create, retrieve, and update common object records in all of the different orgs.

Which method of integration should the application use?

- A. Metadata API
- B. SOAP API with the partner WSDL
- C. Apex REST Web Service
- D. SOAP API with the Enterprise WSDL

**Answer: C**

#### NEW QUESTION # 28

A company uses Opportunism to track sales to their customers and their org has millions of Opportunities. They want to begin to track revenue over time through a related Revenue object.

As part of their initial implementation, they want to perform a one-time seeding of their data by automatically creating and populating Revenue records for Opportunities, based on complex logic. They estimate that roughly 100,000 Opportunities will have revenue records and populated.

What is the optimal way to automate this?

- A. Use `System.enqueueJob()` to invoke a Queueable class.
- B. Use `System.scheduleJob()` to schedule a `Database.Schedulable` class.
- C. Use `Database.txtcuteBatch()` to invoke a `Database.Batchable` class.
- D. Use `Database.executeBatch()` to invoke a Queueable class.

**Answer: B**

#### NEW QUESTION # 29

An org has a requirement that an Account must always have one and only one Contact listed as Primary. So selecting one Contact will de-select any others. The client wants a checkbox on the Contact called 'Is Primary' to control this feature.

The client also wants to ensure that the last name of every Contact is stored entirely in uppercase characters.

What is the optimal way to implement these requirements?

- A. Write an after update trigger on Contact for the Is Primary logic and a separate before update trigger on Contact for the last name logic.
- B. Write an after update trigger on Account for the Is Primary logic and a before update trigger on Contact for the last name logic.
- C. Write a single trigger on Contact for both after update and before update and callout to helper classes to handle each set of logic.
- D. Write a Validation Rule on the Contact for the Is Primary logic and a before update trigger on Contact for the last name logic.

**Answer: C**

Explanation:

A single trigger on Contact that handles both after update and before update events, utilizing helper classes for each logic set, is the most optimal implementation. It centralizes the logic for maintaining primary contacts and normalizing last names while allowing for clear separation of concerns through helper classes.

### NEW QUESTION # 30

As part of a custom development, a developer creates a Lightning component to show how a particular opportunity progresses over time.

The component must display the date stamp when any of the following fields change:

\* Amount, Probability, Stage, or Close Date

How should the developer access the data that must be displayed?

- A. Create custom a custom date field on Opportunity for each field to track the previous date and execute a SOQL query for date fields.
- B. Subscribe to the OpportunityHistory Change Data Capture event in the Lightning component.
- C. Subscribe to the Opportunity Change Data Capture event in the Lightning component.
- D. Execute a SOQL query for Amount, Probability, Stage, and Close Date on the OpportunityHistory object.

**Answer: A**

### NEW QUESTION # 31

.....

To do this the Salesforce PDII certification exam candidates can stay updated and competitive and get a better career opportunity in the highly competitive market. So we can say that with Platform Developer II PDII certificate you can not only validate your expertise but also put your career on the right track.
