

# Fast Download VMware 2V0-16.25: Exam VMware vSphere Foundation 9.0 Administrator Passing Score - High-quality PremiumVCEDump Exam 2V0-16.25 Materials

2026 Latest PremiumVCEDump 2V0-16.25 PDF Dumps and 2V0-16.25 Exam Engine Free Share: [https://drive.google.com/open?id=12TQmxRRMJqJoq12mfVZX6yu40v5tg7\\_2](https://drive.google.com/open?id=12TQmxRRMJqJoq12mfVZX6yu40v5tg7_2)

According to the statistics shown in the feedback chart, the general pass rate for latest 2V0-16.25 test prep is 98%, which is far beyond that of others in this field. In recent years, our 2V0-16.25 exam guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the 2V0-16.25 Exam.

## VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Troubleshoot and Optimize the VMware Solution:</b> This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>VMware vSphere Foundation Fundamentals:</b> This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Deploy, Configure, and Operate VMware vSphere Foundation (VVF):</b> This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Plan and Design the VMware by Broadcom Solution:</b> This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>IT Architectures, Technologies, Standards:</b> This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.</li> </ul>

## Exam 2V0-16.25 Materials - Updated 2V0-16.25 CBT

The importance of learning is well known, and everyone is struggling for their ideals, working like a busy bee. We keep learning and making progress so that we can live the life we want. Our 2V0-16.25 practice test materials help users to pass qualifying examination to obtain a 2V0-16.25 qualification certificate are a way to pursue a better life. If you are a person who is looking forward to a good future and is demanding of yourself, then join the army of learning to pass the 2V0-16.25 Exam. Choosing our 2V0-16.25 test question will definitely bring you many unexpected results!

## VMware vSphere Foundation 9.0 Administrator Sample Questions (Q52-Q57):

### NEW QUESTION # 52

An administrator is tasked with adding a 96-core VMware ESX host to a VMware vSphere Foundation (VVF) 9.0 vCenter cluster. The vCenter has been previously licensed for 1024 cores and the existing hosts equal 960 cores. The administrator adds the host to the vCenter cluster and places the cluster back into production.

What issue will occur if the administrator performs no additional actions to this vCenter?

- A. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, the host will be limited to 64 cores until 32 cores or greater is added to the license.
- B. No issue will occur. The new host was added to the vCenter cluster successfully and will operate for the valid period of the applied license.
- C. The new ESX host has been limited to 64 cores until more capacity is added to the license to license the host. Once 32 cores or greater is added to the license, the full 96 cores of the new host will be useable.
- **D. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, it is disconnected from the vCenter instance.**

**Answer: D**

Explanation:

The vSphere Foundation 9.0 licensing model uses per-core licensing.

\* Current license covers 1024 cores.

\* Existing hosts = 960 cores, leaving 64 cores licensed.

\* Adding a 96-core host# 32 cores exceed the license.

Result:

\* The new host runs in evaluation mode.

\* If not licensed after the evaluation period, the host is disconnected from vCenter.

Other options:

\* A. Limited to 64 cores# Not how VMware licensing enforcement works.

\* B. Limited to 64 cores until license upgrade# Incorrect; VMware does not partially disable cores.

\* D. No issue# Incorrect; licensing compliance will cause issues.

References:

VMware Licensing Guide -Per-Core Licensing Enforcement

VMware Docs: vSphere License Enforcement

### NEW QUESTION # 53

An administrator enables the VMware Cloud Foundation (VCF) Operations orchestrator Plug-in for VMware vSphere Web Client service on a VCF Operations orchestrator appliance.

How many vSphere instances can be integrated in the vSphere Client through the VCF Operations orchestrator plug-in?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

The VCF Operations Orchestrator Plug-in for VMware vSphere Web Client allows orchestration workflows directly in the vSphere Client.

\* However, only one vSphere instance can be integrated at a time with the vSphere Client via this plug-in.

\* This limitation ensures a consistent, single orchestration endpoint per vSphere Client environment.

Other options (8, 10, 15) apply to scaling of vCenter or data sources but not to the Orchestrator Plug-in integration.

References:

VMware Cloud Foundation 9.0.1 -Orchestrator Plug-in Integration Limits

VMware Docs: vRealize Orchestrator Plug-in for vSphere Web Client

### NEW QUESTION # 54

An organization uses VMware Cloud Foundation (VCF) Operations to monitor and troubleshoot issues within a VMware vSphere Foundation (VVF) environment.

As part of the root cause analysis following a recent critical event, the administrator determined that specific log messages on a host clearly identified the problem.

What should the administrator implement to provide additional data to help troubleshoot in the future?

- A. VCF Operations Management Pack for VCF
- B. VCF Automation
- C. VCF Operations Diagnostics
- **D. VCF Operations for logs**

**Answer: D**

Explanation:

When troubleshooting critical events in a VMware vSphere Foundation (VVF) environment, logs are essential for root cause analysis.

\* In the given scenario, the administrator identified that specific log messages on a host clearly pinpointed the issue.

\* To enhance future troubleshooting, the best approach is to implement VCF Operations for Logs.

\* This enables centralized log collection, log-based alerts, and advanced queries, making it easier to correlate issues across infrastructure.

Other options like VCF Operations Diagnostics focus on proactive health checks and findings, while Management Pack for VCF extends observability but does not provide raw log insights. VCF Automation is unrelated to troubleshooting logs.

## 9.0.1 -Configuring and Analyzing Logs

### NEW QUESTION # 55

An administrator creates a cluster by joining a Medium sized VMware Cloud Foundation (VCF) Operations for Logs node to an existing Medium sized single-node deployment.

The secondary node of the cluster fails, degrading the functionality of VCF Operations for Logs.

What action should the administrator take to create a healthy active cluster?

- **A. Rebuild the VCF Operations for Logs cluster secondary node and place the cluster back into operation.**
- B. Scale up the VCF Operations for Logs primary and secondary node to size Large.
- C. Scale up the VCF Operations for Logs primary and secondary node to size Extra Large.
- D. Rebuild the VCF Operations for Logs cluster secondary node and add an additional node to the cluster.

**Answer: A**

Explanation:

In VMware Cloud Foundation (VCF) Operations for Logs, clusters require a minimum of three healthy nodes to function in a fully active and resilient state. When a cluster is deployed with only two nodes (primary + one secondary), the environment does not meet the minimum recommended requirement. If the secondary node fails, the cluster becomes degraded and functionality is reduced.

The correct remediation is:

- \* Rebuild the failed secondary nodes so that the cluster can return to a healthy state.
- \* After rebuilding, the node must be rejoined to the primary using the Management # Cluster workflow (secure token, IP/hostname of primary, etc.).

Why not the other options?

- \* A. Scale up to Extra Large##Scaling up affects resource capacity (vCPU, RAM, disk) but does not solve the problem of missing nodes.
- \* B. Scale up to Large##Same reason as above, scaling up does not restore HA.
- \* D. Rebuild the secondary and add an additional node##While adding more nodes is a best practice (since HA clusters require three nodes), the minimum action required to restore a healthy active cluster is to rebuild the failed node. Adding more nodes is optional for increased resiliency.

Therefore, the immediate and verified answer is to rebuild the failed secondary node.

### NEW QUESTION # 56

An administrator has licensed vSphere components in Connected mode and then switched to Disconnected mode to meet the company security restrictions, which cannot be violated.

What must the administrator do to ensure the VMware vSphere Foundation license remains valid?

- A. Nothing. The license is perpetual.
- B. Provide an internet connection to VCF Operations, then download a new license file from the VCF Business Services console at least once every 180 days.
- C. Switch to Connected mode, validate that VCF Operations has downloaded a new license file from VCF Business Services console, and then switch to Disconnected mode at least once every 365 days.
- **D. Manually exchange a registration and license file between the VCF Operations instance and the VCF Business Services console at least once every 180 days.**

**Answer: D**

Explanation:

For Disconnected mode licensing in vSphere Foundation:

- \* Administrators must manually export a registration file, upload it to the VCF Business Services console, and then import the license file back into VCF Operations.

- \* This process must be repeated every 180 days to maintain license validity.

Other options:

- \* A. Switch to Connected mode once every 365 days# Incorrect; 180-day requirement.

\* C. License is perpetual# Not correct; subscription-based license requires refresh.

\* D. Provide internet connection every 180 days# Violates security restriction (Disconnected mode is required).

## NEW QUESTION # 57

.....

You may attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you want and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due role? You should choose the test 2V0-16.25 Certification and buy our 2V0-16.25 learning file to solve the problem. Passing the test 2V0-16.25 certification can help you increase your wage and be promoted easily and buying our 2V0-16.25 prep guide materials can help you pass the test smoothly.
