

# New C\_ABAPD\_2507 Exam Vce - Reliable C\_ABAPD\_2507 Cram Materials

What's more, part of that DumpsFree C\_ABAPD\_2507 dumps now are free: <https://drive.google.com/open?id=1LOPRv6AQrLGWuee146MElyQdBESiFD31>

I wonder if you noticed that there are three versions of our C\_ABAPD\_2507 test questions—PDF, software on pc, and app online, which can bring you the greatest convenience. Imagine that if you feel tired or simply do not like to use electronic products to learn, the PDF version of C\_ABAPD\_2507 Test Torrent is best for you. Just like reading, you can print it, annotate it, make your own notes, and read it at any time.

DumpsFree is a very good website for SAP certification C\_ABAPD\_2507 exams to provide convenience. According to the research of the past exam exercises and answers, DumpsFree can effectively capture the content of SAP Certification C\_ABAPD\_2507 Exam. DumpsFree's SAP C\_ABAPD\_2507 exam exercises have a very close similarity with real examination exercises.

## Reliable C\_ABAPD\_2507 Cram Materials - Valid C\_ABAPD\_2507 Test Questions

Once the user has used our C\_ABAPD\_2507 learning material for a mock exercise, the product's system automatically remembers and analyzes all the user's actual operations. The user must complete the test within the time specified by the simulation system, and there is a timer on the right side of the screen, as long as the user begins the practice of C\_ABAPD\_2507 Learning Materials, the timer will run automatic and start counting.

### SAP C\_ABAPD\_2507 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>Object-Oriented Design:</b> This section of the exam measures skills of SAP ABAP Developers and covers the basics of object-oriented programming in ABAP. It includes concepts such as classes, interfaces, inheritance, polymorphism, and encapsulation, all of which are necessary for building robust and scalable ABAP applications.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Core ABAP Programming:</b> This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>ABAP RESTful Application Programming Model:</b> This section of the exam measures skills of SAP Application Programmers and covers the fundamentals of the ABAP RESTful Application Programming Model (RAP). It includes topics such as behavior definitions, service binding, and the use of managed and unmanaged scenarios. The focus is on building modern, scalable, and cloud-ready applications using RAP.</li> </ul>

## SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q65-Q70):

### NEW QUESTION # 65

Given the following Core Data Services (CDS) View Entity data definition:

```
DEFINE VIEW ENTITY demo_cds_view_entity
AS SELECT FROM spfli
{
cityfrom,
cityto,
carrid,
connid
}
```

When you attempt to activate the definition, what will be the response?

- **A. Activation error due to no key defined**
- B. Activation will be successful
- C. Activation error due to missing annotation "@AbapCatalog.sqlViewName"
- D. Activation error due to missing annotation "@AccessControl.authorizationCheck"

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

\* CDS View Entities are the successor of classic DDIC-based CDS views and do not use the CDS- managed DDIC view; therefore @AbapCatalog.sqlViewName (used for classic DDIC-based views) is not required for view entities. This eliminates option B.

\* RAP and CDS modeling rely on key fields identified by the keyword key in the underlying CDS view to uniquely identify instances; this key is fundamental for BOs and their sources. A view entity without any key elements therefore lacks a primary key and will not pass activation. This supports option A.

\* Authorization annotations are component annotations; their absence does not by itself block first-time activation of a CDS entity. This rules out option D as the primary cause.

Study-Guide anchors: CDS View Entities (successor of DDIC-based views; no SQL view name), requirement for key elements to define primary keys, and activation behavior for component annotations.

### NEW QUESTION # 66

You want to define the following CDS view entity with an input parameter:

Define view entity Z\_CONVERT With parameters currency : ???

Which of the following can you use to replace "???" Note: There are 2 correct answers to this question.

- A. A component of an ABAP Dictionary structure

- B. A data element
- C. A built-in ABAP Dictionary type
- D. built-in ABAP type

**Answer: B,D**

Explanation:

The possible replacements for "???" in the CDS view entity definition with an input parameter are A. built-in ABAP type and C. A data element. These are the valid types that can be used to specify the data type of an input parameter in a CDS view entity. A built-in ABAP type is a predefined elementary type in the ABAP language, such as abap.char, abap.numc, abap.dec, etc. A data element is a reusable semantic element in the ABAP Dictionary that defines the technical attributes and the meaning of a field<sup>12</sup>. For example:

The following code snippet defines a CDS view entity with an input parameter currency of type abap.cuky, which is a built-in ABAP type for currency key:

Define view entity Z\_CONVERT With parameters currency : abap.cuky as select from ... { ... } The following code snippet defines a CDS view entity with an input parameter currency of type waers, which is a data element for currency key:

Define view entity Z\_CONVERT With parameters currency : waers as select from ... { ... } You cannot do any of the following:

B. A built-in ABAP Dictionary type: This is not a valid type for an input parameter in a CDS view entity. A built-in ABAP Dictionary type is a predefined elementary type in the ABAP Dictionary, such as CHAR, NUMC, DEC, etc. However, these types cannot be used directly in a CDS view entity definition. Instead, they have to be prefixed with abap. to form a built-in ABAP type, as explained above<sup>12</sup>.

D. A component of an ABAP Dictionary structure: This is not a valid type for an input parameter in a CDS view entity. A component of an ABAP Dictionary structure is a field that belongs to a structure type, which is a complex type that consists of multiple fields. However, an input parameter in a CDS view entity can only be typed with an elementary type, which is a simple type that has no internal structure<sup>12</sup>.

#### NEW QUESTION # 67

Which restrictions exist for ABAP SQL arithmetic expressions? Note: There are 2 correct answers to this question.

- A. The operator / is allowed only in floating point expressions.
- B. Decimal types and integer types can NOT be used in the same expression.
- C. Floating point types and integer types can NOT be used in the same expression.
- D. The operator \* is allowed only in floating point expressions.

**Answer: A,D**

Explanation:

ABAP SQL arithmetic expressions have different restrictions depending on the data type of the operands. The following are some of the restrictions:

Floating point types and integer types can be used in the same expression, as long as the integer types are cast to floating point types using the cast function. For example, CAST ( num1 AS FLTP ) / CAST ( num2 AS FLTP ) is a valid expression, where num1 and num2 are integer types.

The operator / is allowed only in floating point expressions, where both operands have the type FLTP or f. For example, num1 / num2 is a valid expression, where num1 and num2 are floating point types. If the operator / is used in an integer expression or a decimal expression, a syntax error occurs.

Decimal types and integer types can be used in the same expression, as long as the expression is a decimal expression. A decimal expression has at least one operand with the type DEC, CURR, or QUAN or p with decimal places. For example, num1 + num2 is a valid expression, where num1 is a decimal type and num2 is an integer type.

The operator \*\* is allowed only in floating point expressions, where both operands have the type FLTP or f. For example, num1 \*\* num2 is a valid expression, where num1 and num2 are floating point types. If the operator \*\* is used in an integer expression or a decimal expression, a syntax error occurs.

#### NEW QUESTION # 68

When defining a METHOD, which parameter type can only have 1 value?

- A. CHANGING
- B. RETURNING
- C. EXPORTING
- D. IMPORTING

**Answer: B**

### NEW QUESTION # 69

Given the following ABAP SQL statement excerpt from an ABAP program:

```
1 SELECT SINGLE  
2 FROM spfli  
3 WHERE carid 'LH' AND conid= '00400'  
4 INTO @DATA(wa).
```

...

You are given the following information:

1. The data source "spfli" on line #2 is an SAP HANA database table.
2. "spfli" will be a large table with over one million rows.
3. This program is the only one in the system that accesses the table.
4. This program will run rarely.

Based on this information, which of the following general settings should you set for the spfli database table? Note: There are 2 correct answers to this question.

- A. "Load Unit" to "Column Loadable"
- B. "Storage Type" to "Column Store"
- C. "Storage Type" to "Row Store"
- D. "Load Unit" to "Page Loadable"

**Answer: A,B**

### NEW QUESTION # 70

.....

All operating systems also support this web-based C\_ABAPD\_2507 practice test. The third format is desktop C\_ABAPD\_2507 practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for C\_ABAPD\_2507 the on first try.
