

Mule-Arch-201 Trustworthy Dumps, Mule-Arch-201 Practice Braindumps

There is no reason to waste your time on a test. If you feel it is difficult to prepare for Salesforce Mule-Arch-201 and need spend a lot of time on it, you had better use PassExamDumps test dumps which will help you save lots of time. What's more, PassExamDumps exam dumps can guarantee 100% pass your exam. There is no better certification training materials than PassExamDumps dumps. Instead of wasting your time on preparing for Mule-Arch-201 Exam, you should use the time to do significant thing. Therefore, hurry to visit PassExamDumps.com to know more details. Miss the opportunity, you will regret it.

PassExamDumps's Salesforce Certification Mule-Arch-201 Exam testing exercises is very similar with real exam questions. If you choose PassExamDumps's testing practice questions and answers, we will provide you with a year of free online update service. PassExamDumps can 100% guarantee you to pass the exam, if you fail to pass the exam, we will full refund to you.

Pass Guaranteed Quiz Salesforce - High Pass-Rate Mule-Arch-201 - Salesforce Certified MuleSoft Platform Architect Trustworthy Dumps

If you choose our Mule-Arch-201 exam question for related learning and training, the system will automatically record your actions and analyze your learning effects. Many people want to get a Mule-Arch-201 certification, but they worry about their ability. So please do not hesitate and join our study. Our Mule-Arch-201 Exam Question will help you to get rid of your worries and help you achieve your wishes. So you will have more opportunities than others and get more confidence. Our Mule-Arch-201 quiz guide is based on the actual situation of the customer.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q90-Q95):

NEW QUESTION # 90

A circuit breaker strategy is planned in order to meet the goal of improved response time and demand on a downstream API.

* Circuit Open: More than 10 errors per minute for three minutes

* Circuit Half-Open: One error per minute

* Circuit Closed: Less than one error per minute for five minutes

Out of several proposals from the engineering team, which option will meet this goal?

- A. Create Anypoint Monitoring alerts for Circuit Open/Closed configurations, and then implement a retry strategy for Circuit Half-Open configuration
- B. Create a custom policy that implements the circuit breaker and includes policy template expressions for the required settings
- C. Implement the strategy in a Mule application, and provide the settings in the YAML configuration
- **D. Add the Circuit Breaker policy to the API instance, and configure the required settings**

Answer: D

Explanation:

Understanding Circuit Breaker Policy:

A circuit breaker is a design pattern used to detect failures and prevent an application from continually trying to execute a failing operation. In this case, it will help improve response time and reduce demand on the downstream API.

The specified configuration includes conditions for opening, half-opening, and closing the circuit based on error rates over time:

Circuit Open: Triggered if there are more than 10 errors per minute for three consecutive minutes.

Circuit Half-Open: The circuit transitions to half-open if there is one error per minute.

Circuit Closed: The circuit closes if the error rate is less than one error per minute for five minutes.

Evaluating the Options:

Option A: Creating a custom policy with template expressions could work, but it would require custom development. Since the Anypoint Platform already has a Circuit Breaker policy available, this would be a less efficient and more complex solution.

Option B: Anypoint Monitoring alerts can be used for monitoring the API, but they do not provide circuit-breaking functionality. Additionally, implementing a retry strategy for the half-open state is not sufficient to achieve the required circuit breaker behavior.

Option C (Correct Answer): Adding the Circuit Breaker policy to the API instance on Anypoint Platform allows you to set up circuit-breaking conditions directly. This approach uses the built-in Circuit Breaker policy, where you can configure parameters such as error thresholds and time intervals to match the requirements. This solution is efficient, reliable, and leverages Anypoint's out-of-the-box capabilities.

Option D: Implementing the strategy within a Mule application with a YAML configuration could be complex and less manageable. Additionally, it does not leverage Anypoint Platform's built-in Circuit Breaker policy, which is more suited to this scenario.

Conclusion:

Option C is the correct choice, as it leverages Anypoint Platform's Circuit Breaker policy. This solution allows for configuring thresholds and time intervals as specified, improving response time and reducing demand on the downstream API while utilizing Anypoint's managed policy feature.

Refer to MuleSoft's documentation on implementing the Circuit Breaker policy in API Manager for detailed configuration guidance.

NEW QUESTION # 91

What Anypoint Platform Capabilities listed below fall under APIs and API Invocations/Consumers category? Select TWO.

- A. API Consumer Engagement
- **B. API Design and Development**
- C. API Operations and Management
- D. API Runtime Execution and Hosting

Answer: B

Explanation:

Correct Answers: API Design and Development and API Runtime Execution and Hosting

>> API Design and Development - Anypoint Studio, Anypoint Design Center, Anypoint Connectors

>> API Runtime Execution and Hosting - Mule Runtimes, CloudHub, Runtime Services

>> API Operations and Management - Anypoint API Manager, Anypoint Exchange

Platform Capabilities

- API design and development
- API runtime execution and hosting

API clients and API Implementations

- API operations and management
- API consumer engagement

APIs and API Invocations/Consumers

© Prasad Pokala

Correct Answers: API Operations and Management and API Consumer Engagement

- >> API Design and Development - Anypoint Studio, Anypoint Design Center, Anypoint Connectors
- >> API Runtime Execution and Hosting - Mule Runtimes, CloudHub, Runtime Services
- >> API Operations and Management - Anypoint API Manager, Anypoint Exchange
- >> API Consumer Management - API Contracts, Public Portals, Anypoint Exchange, API Notebooks

Platform Capabilities

- API design and development
- API runtime execution and hosting

API clients and API Implementations

- API operations and management
- API consumer engagement

APIs and API Invocations/Consumers

NEW QUESTION # 92

What Anypoint Connectors support transactions?

- A. Database, JMS, VM, SFTP

- B. Database, VM, File
- **C. Database, JMS, VM**
- D. Database, 3MS, HTTP

Answer: C

NEW QUESTION # 93

A large lending company has developed an API to unlock data from a database server and web server. The API has been deployed to Anypoint Virtual Private Cloud (VPC) on CloudHub 1.0.

The database server and web server are in the customer's secure network and are not accessible through the public internet. The database server is in the customer's AWS VPC, whereas the web server is in the customer's on-premises corporate data center. How can access be enabled for the API to connect with the database server and the web server?

- A. Set up VPC peering with the customer's on-premises corporate data center and a VPN tunnel to AWS VPC
- **B. Set up VPC peering with AWS VPC and a VPN tunnel to the customer's on-premises corporate data center**
- C. Set up VPC peering with AWS VPC and the customer's on-premises corporate data center
- D. Setup a transit gateway to the customer's on-premises corporate data center through AWS VPC

Answer: B

Explanation:

Scenario Overview:

The API resides in Anypoint Virtual Private Cloud (VPC) on CloudHub 1.0, where it requires connectivity to both an AWS-hosted database server and an on-premises web server.

Both servers are isolated from the public internet: the database server is within the customer's AWS VPC, and the web server is within the customer's on-premises corporate data center.

Connectivity Requirements:

To connect to the AWS database server from the API in Anypoint VPC, VPC peering is ideal. This would allow a private network connection between the MuleSoft Anypoint VPC and the customer's AWS VPC, enabling secure, direct access to the database.

To connect to the on-premises web server, a VPN tunnel is suitable. This would establish a secure, encrypted connection from the Anypoint VPC to the customer's corporate data center, allowing secure data flow between the API and the on-premises web server.

Analysis of Options:

Option A (Correct Answer): Setting up VPC peering with AWS VPC enables private network connectivity with the database server, while a VPN tunnel to the on-premises data center allows secure access to the web server. This combination meets the requirements for secure, controlled access to both resources.

Option B: VPC peering alone would not suffice because it does not support a connection from the Anypoint VPC directly to an on-premises network. A VPN is necessary for on-premises access.

Option C: Setting up a transit gateway would provide connectivity within AWS but would not enable direct connectivity from CloudHub to the on-premises network.

Option D: VPC peering with the on-premises network is not possible because VPC peering is typically used to connect two VPCs, not a VPC with an on-premises network.

Conclusion:

Option A is the correct choice, as it provides a complete solution by using VPC peering for AWS VPC connectivity and a VPN tunnel for secure on-premises connectivity. This setup aligns with Anypoint Platform best practices for connecting Anypoint VPCs to both AWS-hosted and on-premises systems, ensuring secure, controlled access to both the database and web server.

For more detailed reference, MuleSoft documentation on Anypoint VPC peering and VPN connectivity provides additional context on best practices for setting up these connections within a hybrid network infrastructure.

NEW QUESTION # 94

When can CloudHub Object Store v2 be used?

- A. To store an unlimited number of key-value pairs
- **B. To store key-value pairs with keys up to 300 characters**
- C. To store information in Mule 4 Object Store v1
- D. To store payloads with an average size greater than 15MB

Answer: B

Explanation:

CloudHub Object Store v2 is a managed key-value store provided by MuleSoft to support various use cases where temporary data storage is required. Here's why Option D is correct:

Key Length Support: Object Store v2 allows storage of keys with a length of up to 300 characters, making it suitable for applications needing flexible and descriptive keys.

Limitations on Size:

Object Store v2 is not intended for large payload storage and has a recommended size limit below 10 MB for each value. Payloads exceeding 15 MB may cause performance issues and are better suited to a file storage system or database.

Option B is incorrect because storing payloads above 15 MB exceeds Object Store's optimal usage specifications.

Key-Value Limits: Object Store v2 is designed for moderate, transient storage needs, and does not support unlimited storage. Thus, Option A is incorrect.

Backward Compatibility: Object Store v2 does not support Mule 4 applications running Object Store v1. Option C is incorrect as Object Store v1 and v2 are distinct.

Reference

For more on CloudHub Object Store v2, refer to MuleSoft documentation on Object Store limitations and configuration.

NEW QUESTION # 95

.....

Customers always attach great importance to the quality of Mule-Arch-201 exam torrent. We can guarantee that our study materials deserve your trustee. We have built good reputation in the market now. After about ten years' development, we have owned a perfect quality control system. All Mule-Arch-201 exam prep has been inspected strictly before we sell to our customers. Generally, they are very satisfied with our Mule-Arch-201 Exam Torrent. Also, some people will write good review guidance for reference. Maybe it is useful for your preparation of the Mule-Arch-201 exam. In addition, you also can think carefully which kind of study materials suit you best. If someone leaves their phone number or email address in the comments area, you can contact them directly to get some useful suggestions.

Mule-Arch-201 Practice Braindumps: <https://www.passexamdumps.com/Mule-Arch-201-valid-exam-dumps.html>

Pass4sure Mule-Arch-201 Practice Braindumps is a warrant of your best performance, Candidates make an effort to study for the Salesforce Mule-Arch-201 test and are looking for a platform that ensures they will pass the Mule-Arch-201 exam on the first attempt, You should choose the test Mule-Arch-201 certification and buys our Mule-Arch-201 study materials to solve the problem, The Salesforce is one of the leading platforms that are committed to ace the Salesforce Certified MuleSoft Platform Architect Mule-Arch-201 exam preparation with the Salesforce Mule-Arch-201 valid dumps.

If you are considering gathering statistics about your Mule-Arch-201 Exam Training blog, it is strongly recommended that you establish and publish the redirected feed right away, Eventually, the network starts to show signs of strain, and Mule-Arch-201 Exam Training it is usually at this point that the provider begins to struggle with the management of the network.

Salesforce Certified MuleSoft Platform Architect latest study torrent & Mule-Arch-201 vce dumps & Mule-Arch-201 practice cram

Pass4sure Salesforce MuleSoft is a warrant of your best performance, Candidates make an effort to study for the Salesforce Mule-Arch-201 test and are looking for a platform that ensures they will pass the Mule-Arch-201 exam on the first attempt.

You should choose the test Mule-Arch-201 certification and buys our Mule-Arch-201 study materials to solve the problem, The Salesforce is one of the leading platforms that are committed to ace the Salesforce Certified MuleSoft Platform Architect Mule-Arch-201 exam preparation with the Salesforce Mule-Arch-201 valid dumps.

You can actually grasp the shortest time Mule-Arch-201 to do as much interesting and effective things you like as possible.
