Valid Mule-Dev-202 Test Objectives - Cheap Mule-Dev-202 Dumps

With our excellent Mule-Dev-202 exam questions, you can get the best chance to obtain the Mule-Dev-202 certification to improve yourself, for better you and the better future. With our Mule-Dev-202 training guide, you are acknowledged in your profession. The Mule-Dev-202 exam braindumps can prove your ability to let more big company to attention you. Then you have more choice to get a better job and going to suitable workplace. Why not have a try on our Mule-Dev-202 Exam Questions, you will be pleasantly surprised our Mule-Dev-202 exam questions are the best preparation material.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q24-Q29):

NEW QUESTION # 24

Northern Trail Outfitters must create a near real-time inventory API that can be used within its retail POS systems, across its mobile and online stores, and by its strategic B2B e-commerce partners. The API must provide accurate and up-to-date product inventory levels. The data currently resides in both SAP and NetSuite.

According to best practices, which hyperautomation tool should be used to build this solution?

- A. Salesforce Flow
- B. MuleSoft RPA
- C. MuleSoft Composer
- D. Anypoint Platform

Answer: D

Explanation:

To create a near real-time inventory API that integrates data from SAP and NetSuite and can be used across various platforms and

partners, the Anypoint Platform is the most suitable tool:

Anypoint Platform:

Anypoint Platform provides comprehensive integration capabilities, including real-time data processing, API management, and connectivity to various systems like SAP and NetSuite.

It supports building robust, scalable APIs that can handle near real-time data synchronization, ensuring accurate and up-to-date inventory levels across multiple channels.

Best Practices:

Using Anypoint Platform, you can design and manage APIs with fine-grained control over security, performance, and monitoring, adhering to best practices for enterprise integration.

Anypoint Platform Documentation

NEW QUESTION # 25

Northern Trail Outfitters developed an integration between its two Salesforce orgs using MuleSoft Composer.

Which two actions should be taken before testing the Composer flow? (Choose two.)

- A. Ensure the credentials to the target production org are still valid.
- B. Ensure MuleSoft Composer is installed on both the source and target orgs.
- C. Ensure the flow trigger is connected to a sandbox instance of Salesforce.
- D. Ensure action steps are connected to a sandbox instance of Salesforce.

Answer: C,D

Explanation:

Flow Trigger Connection: Before testing any Composer flow, it is crucial to connect the flow trigger to a sandbox instance of Salesforce. This ensures that testing does not impact the production environment. The sandbox provides a safe space to simulate real-world conditions without the risk of data corruption or unintended actions in the live system.

Reference: Salesforce Sandbox Documentation

Action Steps Connection: Similar to the flow trigger, action steps within the Composer flow should also be connected to a sandbox instance. This allows comprehensive testing of the flow's functionality, ensuring that each step performs as expected without affecting the production data.

Reference: MuleSoft Composer Guide

Ensuring Validity of Credentials: While it is important to ensure that credentials to the production org are valid when moving to production, for testing purposes, the emphasis is on sandbox connections. The credentials should be verified to avoid disruptions during testing.

Reference: MuleSoft Composer Flow Setup

Installation of MuleSoft Composer: MuleSoft Composer does not need to be installed on both the source and target orgs as it operates independently and connects to these orgs through provided credentials.

Reference: MuleSoft Composer Installation

NEW QUESTION # 26

AnyAirlines is developing an RPA process to extract information from a legacy system. To capture the manual workflow, they leverage RPA Recorder.

Which two best practices should they be aware of when working with the autogenerated workflow code?

(Choose two.)

- A. All keystrokes and mouse clicks in the autogenerated code must be disabled before deploying to production.
- B. The autogenerated workflows may contain sensitive information that must be removed.
- C. All autocaptured information is for documentation purposes only.
- D. Some autogenerated code must be replaced with more robust or specialized action steps.

Answer: B,D

Explanation:

When developing an RPA process using RPA Recorder, it is essential to be mindful of the following best practices concerning the autogenerated workflow code:

Replace Autogenerated Code:

Robustness: Some of the autogenerated code may not be optimized for robustness or specific use cases. It is often necessary to review and replace parts of the autogenerated workflow with more robust or specialized action steps to ensure reliability and

accuracy.

Specialization: Customizing the workflow to fit the specific requirements of the process can improve performance and handle exceptions better.

Remove Sensitive Information:

Sensitive Data: Autogenerated workflows might capture sensitive information such as usernames, passwords, or other confidential data. It is crucial to identify and remove or mask this information before deploying the RPA process to production to maintain security and compliance.

Compliance: Ensuring that sensitive information is handled appropriately helps in adhering to data protection regulations and organizational policies.

NEW QUESTION # 27

Northern Trail Outfitters has deployed a MuleSoft RPA process to automate the extraction of sales data from CSV files. To integrate this RPA process with Sales Cloud, an action step is created that calls this RPA process in a MuleSoft Composer flow. Which next step must be added to the flow to make use of the RPA process results?

- A. For Each loop
- **B. Create or Update Record action in Sales Cloud**
- C. Create Record action in Sales Cloud
- D. If/Else block

Answer: B

Explanation:

To integrate an RPA process that extracts sales data from CSV files with Sales Cloud using MuleSoft Composer, you need to take the following steps:

Invoke RPA Process:

Create an action step in the MuleSoft Composer flow that calls the RPA process to extract the sales data from the CSV files.

Next Step - Create or Update Record:

After the RPA process completes and returns the extracted data, the next step in the flow should be to update Sales Cloud with the new information.

Use the Create or Update Record action to insert the new sales data into Sales Cloud. This action ensures that existing records are updated if they already exist, or new records are created if they don't.

This approach ensures that the results from the RPA process are correctly reflected in Sales Cloud.

NEW QUESTION # 28

AnyAirlines wants to share the Flight Path API through their public Anypoint Exchange Portal.

What should be configured before the API can be shared?

- **A. The visibility level of API instances should be set to public.**
- B. The API should be functional and accessible for users to interact with.
- C. The users that need access to the API should be added to the appropriate role in Anypoint Platform.
- D. The API should be secured using one of the supported authentication/authorization mechanisms.

Answer: A

Explanation:

Before sharing an API on the public Anypoint Exchange Portal, several configurations must be in place:

Set Visibility Level to Public:

Ensure the API's visibility level is configured as public within the Anypoint Platform so that it can be shared and accessed by external users.

Navigate to Anypoint Platform > API Manager > Select the API > Settings > Set Visibility to Public.

Ensure API Functionality and Accessibility:

Make sure the API is fully functional and accessible so that users can interact with it once shared.

Configure Security:

While setting the visibility to public is crucial, ensuring that the API is secured using one of the supported authentication/authorization mechanisms is a best practice to control access.
