

Valid Test Professional-Cloud-Security-Engineer Experience | Accurate Professional-Cloud-Security-Engineer Study Material

P.S. Free & New Professional-Cloud-Security-Engineer dumps are available on Google Drive shared by TestPDF: <https://drive.google.com/open?id=147L6hswCga-LKXUs5MDxzQtyFhPc-nc0>

This format is for candidates who do not have the time or energy to use a computer or laptop for preparation. The Google Professional-Cloud-Security-Engineer PDF file includes real Google Professional-Cloud-Security-Engineer questions, and they can be easily printed and studied at any time. TestPDF regularly updates its PDF file to ensure that its readers have access to the updated questions.

How our Professional-Cloud-Security-Engineer study questions can help you successfully pass your coming Professional-Cloud-Security-Engineer exam? The answer lies in the outstanding Professional-Cloud-Security-Engineer exam materials prepared by our best industry professionals and tested by our faithful clients. Our exam materials own the most authentic and useful information in questions and answers. For our Professional-Cloud-Security-Engineer practice material have been designed based on the format of real exam questions and answers that you would surely find better than the other exam vendors’.

Prepare Exam Effectively With Desktop Google Professional-Cloud-Security-Engineer Practice Test Software

The TestPDF wants to become the first choice of Google Professional-Cloud-Security-Engineer certification exam candidates. To achieve this objective the top-notch and real Google Professional-Cloud-Security-Engineer exam questions are being offered in three easy-to-use and compatible formats. These TestPDF Professional-Cloud-Security-Engineer Exam Questions formats are PDF dumps files, desktop practice test software, and web-based practice test software.

Google Professional-Cloud-Security-Engineer Certification Exam is designed to test an individual's knowledge and skills in securing applications and data within the Google Cloud Platform (GCP) environment. Google Cloud Certified - Professional Cloud Security Engineer Exam certification is intended for security professionals who have experience in implementing and managing security

solutions on GCP.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q98-Q103):

NEW QUESTION # 98

You are a security administrator at your company and are responsible for managing access controls (identification, authentication, and authorization) on Google Cloud. Which Google- recommended best practices should you follow when configuring authentication and authorization? (Choose two.)

- A. Use Google default encryption.
- **B. Provide granular access with predefined roles.**
- C. Manually add users to Google Cloud.
- D. Provision users with basic roles using Google's Identity and Access Management (IAM) service.
- **E. Use SSO/SAML integration with Cloud Identity for user authentication and user lifecycle management.**

Answer: B,E

Explanation:

https://cloud.google.com/iam/docs/using-iam-securely#least_privilege

Basic roles include thousands of permissions across all Google Cloud services. In production environments, do not grant basic roles unless there is no alternative. Instead, grant the most limited predefined roles or custom roles that meet your needs.

NEW QUESTION # 99

You have been tasked with inspecting IP packet data for invalid or malicious content. What should you do?

- A. Configure the Fluentd agent on each VM Instance within the VPC. Perform inspection on the log data using Cloud Logging.
- B. Enable VPC Flow Logs for all subnets in the VPC. Perform inspection on the Flow Logs data using Cloud Logging.
- C. Configure Google Cloud Armor access logs to perform inspection on the log data.
- **D. Use Packet Mirroring to mirror traffic to and from particular VM instances. Perform inspection using security software that analyzes the mirrored traffic.**

Answer: D

Explanation:

<https://cloud.google.com/vpc/docs/packet-mirroring>

Packet Mirroring clones the traffic of specified instances in your Virtual Private Cloud (VPC) network and forwards it for examination. Packet Mirroring captures all traffic and packet data, including payloads and headers.

NEW QUESTION # 100

For compliance reasons, an organization needs to ensure that in-scope PCI Kubernetes Pods reside on "in- scope" Nodes only. These Nodes can only contain the "in-scope" Pods. How should the organization achieve this objective?

- **A. Place a taint on the Nodes with the label inscope: true and effect NoSchedule and a toleration to match in the Pod configuration.**
- B. Add a nodeSelector field to the pod configuration to only use the Nodes labeled inscope: true.
- C. Create a node pool with the label inscope: true and a Pod Security Policy that only allows the Pods to run on Nodes with that label.
- D. Run all in-scope Pods in the namespace "in-scope-pci".

Answer: A

NEW QUESTION # 101

You have placed several Compute Engine instances in a private subnet. You want to allow these instances to access Google Cloud services, like Cloud Storage, without traversing the internet.

What should you do?

- A. Reserve and assign static external IP addresses for the Compute Engine instances.
- B. Create a Cloud NAT gateway for the region where the private subnet is configured.
- C. Configure Private Service Connect for the private subnet's Virtual Private Cloud (VPC) and allocate an IP range for the Compute Engine instances.
- **D. Enable Private Google Access for the private subnet.**

Answer: D

Explanation:

Private Google Access: This feature allows instances in a private subnet to reach Google APIs and services without using their public IP addresses. This is the most direct and recommended way to achieve your goal.

NEW QUESTION # 102

You have been tasked with inspecting IP packet data for invalid or malicious content. What should you do?

- A. Configure the Fluentd agent on each VM Instance within the VPC. Perform inspection on the log data using Cloud Logging.
- B. Configure Google Cloud Armor access logs to perform inspection on the log data.
- **C. Enable VPC Flow Logs for all subnets in the VPC. Perform inspection on the Flow Logs data using Cloud Logging.**
- D. Use Packet Mirroring to mirror traffic to and from particular VM instances. Perform inspection using security software that analyzes the mirrored traffic.

Answer: C

NEW QUESTION # 103

.....

Three formats of our study material are Google Professional-Cloud-Security-Engineer PDF Questions, Desktop Practice Test Software, and a Web-Based Practice Exam. We understand that the learning style of every Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam applicant is different. Therefore, we offer three formats of Professional-Cloud-Security-Engineer Practice Test material. Now every Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam candidate can prepare as per his style by selecting the suitable format.
