Salesforce Platform Developer I (PDI) Sample Questions (Q128-Q133):

NEW QUESTION # 128
As a part of class implementation a developer must execute a SOQL query against a large data ser based on the contact object. The method implementation is as follows.
Which two methods are best practice to implement heap size control for the above code? (Choose 2 Answers)

- A. Use a SOQL FOR loop, to chunk the result set in batches of 200 records.
- B. Use visual keyword when declaring the retrieve variable.
- C. Use the FOR UPDATE option on the SOQL query to lock down the records retrieved.
- D. Use WHERE clauses on the SOQL query to reduce the number of records retrieved.

Answer: A,B

NEW QUESTION # 129

What are two benefits of using External IDs? Choose 2 answers

- A. An External ID field can be used to reference an ID from another external system.
- B. An External ID can be a formula field to help create a unique key from two fields in Salesforce.
- C. External ID is indexed and can improve the performance of SOQL queries.
- D. An External ID can be used with Salesforce Mobile to make external data visible.

Answer: A,C

Explanation:
Option A: An External ID field can be used to reference an ID from another external system.
True.
External IDs are custom fields that have the External ID attribute selected.
They are used to store unique identifiers from external systems, allowing Salesforce to match and integrate data based on external IDs.
External ID fields are automatically indexed, which means they can improve the performance of SOQL queries, especially when used in the WHERE clause.
Indexed fields reduce query times on large datasets.
External IDs do not make external data visible in Salesforce or Salesforce Mobile.
To make external data visible, you would use features like Salesforce Connect.
Formula fields cannot be marked as External IDs.
Only Text, Number, Email, or Auto-Number fields can be designated as External IDs.
Reference:
External ID Fields
Option B: External ID is indexed and can improve the performance of SOQL queries.
True.
Custom Indexed Fields
Option C: An External ID can be used with Salesforce Mobile to make external data visible.
False.
Salesforce Connect
Option D: An External ID can be a formula field to help create a unique key from two fields in Salesforce.
False.
Considerations for External IDs
Conclusion:
The correct benefits of using External IDs are A and B.

NEW QUESTION # 130

A Salesforce administrator used Flow Builder to create a flow named "accountOnboarding". The flow must be used inside an Aura component.
Which tag should a developer use to display the flow in the component?

- A. lightning-flow
- B. lightning:flow
- C. aura-flow
- D. aura:flow

Answer: B

Explanation:
To embed a Flow into an Aura component, you use the lightning:flow component.
Option A: lightning
Correct Answer.
The lightning:flow component allows you to embed a Flow in an Aura component.
Example Usage:
<aura:component>
<lightning:flow aura:id="flowData" />
</aura:component>
Reference:

Aura Component
Options Not Applicable:
Option B: aura-flow
Invalid Component.
Option C: aura
Invalid Component.
Option D: lightning-flow
Invalid Component Name in Aura.
Conclusion:
To display the Flow in an Aura component, the developer should use the lightning:flow tag, which is Option A.

NEW QUESTION # 131

A developer wants to create a custom object to track Customer Invoices.How should Invoices and Accounts be related to ensure that all Invoices are visible to everyone with access to an Account?

- A. The Account should have a Master-Detail relationship to the Invoice.
- B. The Account should have a Lookup relationship to the Invoice
- C. The Invoice should have a Lookup relationship to the Account Previous
- D. The Invoice should have a Master-Detail relationship to the Account

Answer: D

NEW QUESTION # 132

A developer creates a custom exception as shown below:
public class ParityException extends Exception { }
What are two ways the developer can fire the exception in Apex?

- A. throw new ParityException ();
- B. throw new parityException ('parity does not match');
- C. new ParityException('parity does not match');
- D. new ParityException ();

Answer: A,B

Explanation:
Throwing Exceptions in Apex:
throw new ExceptionType();creates a new instance and throws it.
A: No argument constructor.
B: Constructor with a custom error message.
Why Not Other Options?
C and D: These create exception instances but do not throw them, which is not valid syntax for firing an exception.
