## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q83-Q88):

### NEW QUESTION # 83

Which of the following is an example of a natural disaster?

- A. Data breach
- B. Server failure
- C. Malware attack
- **D. Power outage**

**Answer: D**

Explanation:

A power outage is considered a natural disaster because it is caused by factors beyond human control, such as severe weather conditions or infrastructure failures. It can disrupt normal operations and impact the availability of systems and resources.

### NEW QUESTION # 84

You need to design your company's password policy to adhere to the National Institute of Standards and Technology (NIST) guidelines for user password security.

What is the minimum password length that you should require to be consistent with the NIST guidelines?

- A. 16 characters
- **B. 8 characters**
- C. No minimum length
- D. 4 characters

**Answer: B**

Explanation:

According to the CCST Cybersecurity course, NIST guidelines (SP 800-63B) recommend a minimum password length of 8 characters for user-generated passwords, without requiring overly complex composition rules, but encouraging longer passphrases for increased security.

"NIST guidelines specify that user-generated passwords must be at least 8 characters in length, and systems should allow passwords up to at least 64 characters." (CCST Cybersecurity, Essential Security Principles, Authentication Best Practices section, Cisco Networking Academy)

### NEW QUESTION # 85

Which network security technology passively monitors network traffic and compares the captured packet stream with known malicious signatures?

- A. IPS
- B. Honeypot
- **C. IDS**
- D. Proxy Server

**Answer: C**

Explanation:

The CCST Cybersecurity course states that an Intrusion Detection System (IDS) passively monitors network or system traffic and analyzes it against a database of known threat signatures or behavioral patterns.

"IDS devices inspect network traffic, compare it to known malicious signatures or anomalies, and generate alerts for suspicious activity without actively blocking traffic." (CCST Cybersecurity, Basic Network Security Concepts, IDS and IPS section, Cisco Networking Academy) A is correct: IDS is passive and signature-based.

B (IPS) is active and can block traffic.

C (Proxy Server) handles requests between clients and servers.

D (Honeypot) is a decoy system to attract attackers.

#### NEW QUESTION # 86

Which of the following represents a strong passphrase for securing a wireless SoHo network?

- A. 0
- B. P@ssword!
- C. jumpr0pe
- D. CorrectHorseBatteryStaple

**Answer: D**

Explanation:

A strong passphrase should be long, include a combination of uppercase and lowercase letters, numbers, and special characters. "CorrectHorseBatteryStaple" represents a strong passphrase as it is long and includes multiple words combined with special characters. Options A, B, and C are weak passphrases as they are either too short or do not contain a combination of the mentioned elements.

#### NEW QUESTION # 87

What does the term "data classification" refer to in the context of cybersecurity?

- A. Protecting data from unauthorized access
- B. Backing up data to prevent data loss
- C. Encrypting data to ensure confidentiality
- D. Sorting data based on its importance and sensitivity

**Answer: D**

Explanation:

Data classification is the process of categorizing data based on its importance, sensitivity, and the level of protection required. This helps ensure that appropriate security measures are applied to protect different types of data.
