Desktop CWNP Wireless Network Administrator (CWNA) (CWNA-109) practice exam software also keeps track of the earlier attempted CWNP CWNA-109 practice test so you can know mistakes and overcome them at each and every step. The Desktop CWNP Wireless Network Administrator (CWNA) (CWNA-109) practice exam software is created and updated in a timely by a team of experts in this field. If any problem arises, a support team is there to fix the issue.

The CWNP Wireless Network Administrator (CWNA) (CWNA-109) questions are available in three easy-to-use forms. The first one is a CWNP Wireless Network Administrator (CWNA) (CWNA-109) Dumps PDF form, and it is printable and portable. You can print CWNP Wireless Network Administrator (CWNA) (CWNA-109) questions PDF or can access them by saving them on your smartphones, tablets, and laptops. The CWNP Wireless Network Administrator (CWNA) (CWNA-109) dumps PDF format can be used anywhere, anytime and is essential for students who like to learn from their smart devices for CWNP Wireless Network Administrator (CWNA) (CWNA-109) exam.

Reliable CWNP CWNA-109 Exam Papers | Study CWNA-109 Materials

It is important to mention here that the CWNP Wireless Network Administrator (CWNA) practice questions played important role in their CWNP CWNA-109 Exams preparation and their success. So we can say that with the CWNP CWNA-109 Exam Questions you will get everything that you need to learn, prepare and pass the difficult CWNP CWNA-109 exam with good scores.

CWNP Wireless Network Administrator (CWNA) Sample Questions (Q44-

Q49):

NEW QUESTION # 44

You are a small business wireless network consultant and provide WLAN services for various companies. You receive a call from one of your customers stating that their laptop computers suddenly started experiencing much slower data transfers while connected to the WLAN. This company is located in a multi-tenant office building and the WLAN was designed to support laptops, tablets and mobile phones. What could cause a sudden change in performance for the laptop computers?

- A. A few of your customer's users have Bluetooth enabled wireless headsets.
- B. The antennas in the laptops have been repositioned.
- **C. A new tenant in the building has set their AP to the same RF channel that your customer is using.**
- D. The sky was not as cloudy that day as it typically is and the sun also radiates electromagnetic waves.

Answer: C

Explanation:

A possible cause of a sudden change in performance for the laptop computers is that a new tenant in the building has set their AP to the same RF channel that your customer is using. This can create co-channel interference (CCI), which is a situation where two or more APs or devices use the same or overlapping channels in the same area. CCI can degrade the performance of WLANs by increasing contention, collisions, retransmissions, and latency. CCI can also reduce the effective range and throughput of WLANs by lowering the signal-to-noise ratio (SNR). To avoid or mitigate CCI, it is recommended to use non-overlapping channels, adjust transmit power levels, or implement channel management techniques such as dynamic frequency selection (DFS) or load balancing. The sky condition, antenna position, or Bluetooth headset are not likely to cause a sudden change in performance for the laptop computers. NEW QUESTION # 45

When implementing PoE, what role is played by a switch?

- A. Midspan injector
- **B. PSE**
- C. Power splitter
- D. PD

Answer: B

Explanation:

PoE stands for Power over Ethernet, which is a technology that allows network devices to receive power and data over the same Ethernet cable. PoE eliminates the need for separate power adapters or outlets for devices such as IP phones, cameras, or APs. PoE requires two types of devices: PSE (Power Sourcing Equipment) and PD (Powered Device). A PSE is a device that provides power to the Ethernet cable, such as a switch, injector, or splitter. A PD is a device that receives power from the Ethernet cable, such as an IP phone, camera, or AP. When implementing PoE, a switch plays the role of a PSE. NEW QUESTION # 46

What statement is true concerning the use of Orthogonal Frequency Division Multiplexing (OFDM) modulation method in IEEE 802.11 WLANs?

- A. OFDM modulation is used only in 5 GHz 802.11 transmissions.
- B. OFDM implements BPSK modulation to allow for data rates up to 7 Gbps.
- C. OFDM was used by Frequency Hopping Spread Spectrum (FHSS) PHY devices.
- **D. OFDM was first introduced in 802.11a and is used by the ERP, HT and VHT PHYs as well.**

Answer: D

Explanation:

OFDM is a modulation method that divides the channel bandwidth into multiple subcarriers, each carrying a single data symbol. This allows for higher data rates and more robust transmissions in multipath environments. OFDM was first introduced in the 802.11a

standard, which operates in the 5 GHz band and supports data rates up to 54 Mbps. Later, the 802.11g standard adopted OFDM for the 2.4 GHz band, and the 802.11n and 802.11ac standards enhanced OFDM with features such as MIMO (Multiple Input Multiple Output), channel bonding, and higher-order modulation schemes to achieve data rates up to 600 Mbps and 6.9 Gbps, respectively. These standards are collectively known as the ERP (Extended Rate PHY), HT (High Throughput), and VHT (Very High Throughput) PHYs .

NEW QUESTION # 47

What cipher suite is specified by the 802.11-2016 standard and is not deprecated?

- A. Wired Equivalent Privacy
- B. Temporal Key Integrity Protocol
- C. Extensible Authentication Protocol
- **D. Counter Mode with CBC-MAC Protocol**

Answer: D

Explanation:

The cipher suite specified by the 802.11-2016 standard and is not deprecated is Counter Mode with CBC-MAC Protocol (CCMP). CCMP is an encryption protocol that uses Advanced Encryption Standard (AES) as the underlying cipher and provides confidentiality, integrity, and origin authentication for wireless data. CCMP is the mandatory encryption protocol for WPA2 and WPA3. NEW QUESTION # 48

802.11ax (HE) introduces Resource Units that can be used to allow communications with multiple devices at the same time, on the same channel, in the same BSS. What feature of 802.11ax provides this functionality?

- **A. OFDMA**
- B. Wi-Fi-LTE
- C. 6 GHz support
- D. TWT

Answer: A

Explanation:

The feature of 802.11ax (HE) that provides this functionality is OFDMA. OFDMA stands for Orthogonal Frequency Division Multiple Access and is a technology that allows multiple devices to communicate simultaneously on the same channel in the same BSS. OFDMA works by dividing a channel into smaller subchannels called Resource Units (RUs), which are composed of groups of subcarriers or tones. Each RU can be assigned to a different device based on its bandwidth requirement and signal quality. This way, OFDMA can increase the efficiency and capacity of the channel by reducing overhead, contention, and latency. OFDMA can also support both uplink and downlink multi-user transmissions using trigger frames and buffer status reports. 6 GHz support, TWT, and Wi-Fi-LTE are not features of 802.11ax that provide this functionality. NEW QUESTION # 49

.....

According to the survey of our company, we have known that a lot of people hope to try the CWNA-109 test training materials from our company before they buy the CWNA-109 study materials. So a lot of people long to know the CWNA-109 study questions in detail. In order to meet the demands of all people, our company has designed the trail version for all customers. We can promise that our company will provide the demo of the CWNA-109 learn prep for all people to help them make the better choice.

It means you can try our demo and you do not need to spend any money.
