## Fast Download Exam Dumps SPLK-1002 Free | Easy To Study and Pass Exam at first attempt & Excellent Splunk Splunk Core Certified Power User Exam

You choosing ActualTestsIT to help you pass Splunk certification SPLK-1002 exam is a wise choice. You can first online free download ActualTestsIT's trial version of exercises and answers about Splunk Certification SPLK-1002 Exam as a try, then you will be more confident to choose ActualTestsIT's product to prepare for Splunk certification SPLK-1002 exam. If you fail the exam, we will give you a full refund.

## Splunk Core Certified Power User Exam Sample Questions (Q179-Q184):

### NEW QUESTION # 179

What does the following search do?

□

- A. Creates a table that groups the total number of users by vegetarian comdogs.
- B. Creates a table with the count of all types of comdogs eaten split by user.
- C. Creates a table of the total count of mysterymeat comdogs split by user.
- D. Creates a table of the total count of users and split by comdogs.

Answer: C

Explanation:

The search string below creates a table of the total count of mysterymeat corndogs split by user.

```
| stats count by user | where corndog=mysterymeat
```

The search string does the following:

\* It uses the stats command to calculate the count of events for each value of the user field. The stats command creates a table with two columns: user and count.

\* It uses the where command to filter the results by the value of the corndog field. The where command only keeps the rows where corndog equals mysterymeat.

Therefore, the search string creates a table of the total count of mysterymeat corndogs split by user.

### NEW QUESTION # 180

What does the following search do?

□

- A. Creates a table that groups the total number of users by vegetarian corndogs.
- B. Creates a table with the count of all types of corndogs eaten split by user.
- C. Creates a table of the total count of mysterymeat corndogs split by user.
- D. Creates a table of the total count of users and split by corndogs.

**Answer: C**

Explanation:

The search string below creates a table of the total count of mysterymeat corndogs split by user.

```
| stats count by user | where corndog=mysterymeat
```

The search string does the following:

\* It uses the stats command to calculate the count of events for each value of the user field. The stats command creates a table with two columns: user and count.

\* It uses the where command to filter the results by the value of the corndog field. The where command only keeps the rows where corndog equals mysterymeat.

Therefore, the search string creates a table of the total count of mysterymeat corndogs split by user.

### NEW QUESTION # 181

Which of the following statements describes the use of the Field Extractor (FX)?

- A. The Field Extractor uses PERL to extract fields from the raw events.
- B. Fields extracted using the Field Extractor do not persist and must be defined for each search.
- C. The Field Extractor automatically extracts all fields at search time.
- D. Fields extracted using the Field Extractor persist as knowledge objects.

**Answer: D**

Explanation:

The statement that fields extracted using the Field Extractor persist as knowledge objects is true. The Field Extractor (FX) is a graphical tool that allows you to extract fields from raw events using regular expressions or delimiters. The fields extracted by the FX are saved as knowledge objects that can be used in future searches or shared with other users.

### NEW QUESTION # 182

Highlighted search terms indicate \_\_\_\_\_ search results in Splunk.

- A. Display as selected fields.
- B. Sorted
- C. Charted based on time
- D. Matching

**Answer: D**

Explanation:

Explanation

Highlighted search terms indicate matching search results in Splunk, which means that they show which parts of your events match your search string. For example, if you search for error OR fail, Splunk will highlight error or fail in your events to show which events match your search string. Therefore, option D is correct, while options A, B and C are incorrect because they are not indicated by highlighted search terms.

### NEW QUESTION # 183

\_\_\_\_\_ datasets can be added to root dataset to narrow down the search

- A. extracted
- B. event
- C. child
- D. parent

**Answer: C**

Explanation:

Explanation

Child datasets can be added to root datasets to narrow down the search. Datasets are collections of events that represent your data in a structured and hierarchical way. Datasets can be created by using commands such as datamodel or pivot. Datasets can have different types, such as events, search, transaction, etc. Datasets can also have different levels, such as root or child. Root datasets are base datasets that contain all events from a data model or an index. Child datasets are derived datasets that contain a subset of events from a parent dataset based on some constraints, such as search terms, fields, time range, etc. Child datasets can be added to root datasets to narrow down the search and filter out irrelevant events.

### NEW QUESTION # 184

.....

We believe that every customer pays most attention to quality when he is shopping. Only high-quality goods can meet the needs of every customer better. And our SPLK-1002 study materials have such high quality, because its hit rate of test questions is extremely high. Perhaps you will find in the examination that a lot of questions you have seen many times in our SPLK-1002 Study Materials. In addition, the passing rate is the best test for quality of study materials. And we can be very proud to tell you that the passing rate of our SPLK-1002 study materials is almost 100 %.
