

Quiz 2026 NCP-DB-6.10: Valid Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Valid Test Format

BONUS!!! Download part of GuideTorrent NCP-DB-6.10 dumps for free: <https://drive.google.com/open?id=1hCqwh-07lh3cnuG3ifZWCoME5OMawrD>

If you want to find a good job, you must own good competences and skillful major knowledge. So owning the NCP-DB-6.10 certification is necessary for you because we will provide the best NCP-DB-6.10 study materials to you. Our NCP-DB-6.10 exam torrent is of high quality and efficient, and it can help you pass the test successfully. For the NCP-DB-6.10 training guide we provide with you is compiled by professionals elaborately and boosts varied versions which aimed to help you learn the NCP-DB-6.10 study materials by the method which is convenient for you. And you can pass the exam with success guaranteed.

Nutanix NCP-DB-6.10 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Administer and Automate NDB	15%	- Manage profiles, software versions and updates - Use APIs, CLI and automation tools - Maintain multi-cluster environments
Topic 2: Protect Databases with Time Machine	15%	- Perform restore and point-in-time recovery - Configure SLA policies and retention
Topic 3: Deploy and Configure an NDB Solution	20%	- Register clusters, database servers and engines - Install and configure NDB server and agents - Configure networking, security and access control
Topic 4: Provision and Manage Database Lifecycle	20%	- Create, modify and delete databases - Manage clones, snapshots and refresh operations - Apply patches and upgrades
Topic 5: Describe NDB Concepts	10%	- Explain features, use cases and business value - Define NDB terminology and components
Topic 6: Monitor, Optimize and Troubleshoot	20%	- Monitor performance, alerts and resource usage - Optimize configurations and workloads - Troubleshoot common issues and errors

Nutanix NCP-DB-6.10 Latest Braindumps Ppt | NCP-DB-6.10 Reliable Dumps Pdf

With the help of our NCP-DB-6.10 practice dumps, you will be able to feel the real exam scenario. It is better than NCP-DB-6.10 dumps questions. If you want to pass the Nutanix NCP-DB-6.10 exam in the first attempt, then don't forget to go through the NCP-DB-6.10 practice test provided by the GuideTorrent. It will allow you to assess your skills and you will be able to get a clear idea of your preparation for the real Nutanix NCP-DB-6.10 Exam. It is the best way to proceed when you are trying to find the best solution to pass the NCP-DB-6.10 exam in the first attempt.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q251-Q256):

NEW QUESTION # 251

An administrator is trying to register a Nutanix cluster for Multi-Cluster provisioning. The Era cluster is setup with following configuration:

- Era Multi-Cluster is enabled.
- Era Server storage container and Era provisioning container are different on the Era cluster.

What should the administrator configure?

- A. Separate remote containers for provisioning Era Agent VM and database Server VMs.
- B. Storage mapping between Era container and a remote container that is not used for provisioning databases.
- C. Storage mapping between Era server container and remote container that is used for provisioning DBs.
- D. Disks that span across Era Server storage container and Era provisioning container.

Answer: C

Explanation:

In a Nutanix Era setup where Multi-Cluster is enabled and the Era Server storage container and Era provisioning container are different on the Era cluster, the administrator should configure a storage mapping between the Era server container and the remote container that is used for provisioning databases. This is because Nutanix Era uses the storage container specified during the registration of the Nutanix cluster for provisioning databases. Therefore, a storage mapping needs to be established between the Era server container and the remote container used for provisioning to ensure that the databases are provisioned correctly.

NEW QUESTION # 252

In an Oracle upgrade scenario using Era, if the source database is on a non-Nutanix platform, is it possible to upgrade it with an Era workflow?

- A. No, the database instance must be manually managed to be upgraded
- B. Yes, only if the non-Nutanix platform is big-endian platform.
- C. Yes, only if the non-Nutanix platform is little-endian platform.
- D. Yes, it is possible to upgrade database instance on a non-Nutanix platform.

Answer: A

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, Nutanix Era is a database management tool that automates and simplifies database operations, including provisioning, patching, upgrading, and more. However, for a database to be managed by Era, it must be registered with Era. This means that if a database is on a non-Nutanix platform, it cannot be directly upgraded using an Era workflow. It must first be migrated to a Nutanix platform and registered with Era before it can be managed and upgraded using Era.

NEW QUESTION # 253

An administrator wants to manage an additional database on an existing database server VM.

What field should the administrator look in for this new database?

- A. Database Server VM
- B. Unregistered Databases
- C. Registered Databases
- D. Database Name in NDB

Answer: B

Explanation:

When an administrator wants to manage an additional database on an existing database server VM in NDB, the first step is to identify if the database is already recognized by NDB. The

"Unregistered Databases" field or section within the NDB interface lists databases that are present on a registered database server VM but have not yet been registered with NDB. This allows the administrator to discover and register the new database, enabling

full management capabilities (e.g., provisioning, cloning, or patching). Once registered, the database will move to the "Registered Databases" section.

NEW QUESTION # 254

An administrator needs to create and refresh clones to a point in time. NDB allows which two methods for satisfying this requirement? (Choose two.)

- A. VM snapshots
- **B. Snapshots**
- **C. Transaction logs**
- D. Full backups

Answer: B,C

Explanation:

NDB allows creating and refreshing clones to a point in time using two primary methods:

Snapshots: NDB uses storage snapshots (e.g., via Nutanix Volumes or AHV) to capture the database state at a specific point. These snapshots can be used to create or refresh clones, providing a consistent recovery point.

Transaction logs: Transaction logs (e.g., PostgreSQL WAL, SQL Server logs) enable point-in-time recovery (PITR) by applying logs to a snapshot, allowing clones to be refreshed to a precise moment.

NEW QUESTION # 255

What is the main purpose of using a Database Profile during database creation?

- A. Define the storage location of backups
- B. Generate capacity forecasting reports
- C. Manage database patch bundles
- **D. Apply a standardized set of configurations to a database instance**

Answer: D

Explanation:

Database Profiles define reusable settings-CPU/Memory, storage layout, and DB parameters-to ensure consistent and predictable deployments.

NEW QUESTION # 256

.....

Many candidates who take the qualifying exams are not aware of our NCP-DB-6.10 exam questions and are not guided by our systematic guidance, and our users are much superior to them. In similar educational products, the NCP-DB-6.10 quiz guide is absolutely the most practical. Also, from an economic point of view, our NCP-DB-6.10 Exam Guide Materials is priced reasonable, so the NCP-DB-6.10 test material is very responsive to users, user satisfaction is also leading the same products. You can deeply depend on our NCP-DB-6.10 exam guide materials when you want to get the qualification.
