These PassReview Veeam Certified Engineer v12 (VMCE_v12) exam dumps will provide you with everything that you need to prepare and pass the final VMCE_v12 exam with flying colors.

Veeam Certified Engineer v12 Sample Questions (Q162-Q167):

NEW QUESTION # 162

A corporation decides to merge with another company. As part of this merger, the system administrator needs to consolidate the backups from two separate jobs into one. The system administrator's task is to ensure a smooth migration with minimal downtime and data loss. Which strategy should the administrator implement to achieve this goal?

- A. Manually copy all backup files from the two jobs into a new job using a file transfer protocol (FTP) program.
- **B. Use the "Move backup" feature in Veeam V12.1 to move the backups from the two jobs into a new job.**
- C. Use a third-party data migration tool to consolidate the backup data from the two jobs into one.
- D. Use the "Backup Copy" feature in Veeam V12.1, specifying the new job as the target, and then reconfigure the original jobs to use the new job.

Answer: B

Explanation:

https://helpcenter.veeam.com/docs/backup/vsphere/move_backup.html?ver=120

NEW QUESTION # 163

In the event a VMware VM configuration file (VMX) is missing and a restore is needed, what Veeam restore process is the best choice for this situation?

- **A. VM file restore**
- B. Virtual disk restore
- C. Instant disk recovery
- D. Instant VM recovery

Answer: A

Explanation:

https://helpcenter.veeam.com/docs/backup/vsphere/vmfile_recovery.html?ver=100

NEW QUESTION # 164

A Scale-out Backup Repository with one local extent has been configured as follows.

A daily VMware backup job retention is 31 days, keeping weekly GFS full backups for 14 weeks. It is Mar, 20. A file from a backup that occurred the week of Jan, 1 must be recovered. Where is the data?

- A. The archive tier
- B. The performance tier
- C. The capacity tier
- D. The data is no longer in the Scale-out Backup Repository

Answer: C

Explanation:

Based on the configuration shown in the image, backups older than 21 days are moved to the capacity tier.

Since the VMware backup job retention is set for 31 days and keeps weekly GFS full backups for 14 weeks, the backup from the week of January 1st is older than 21 days but within the 14-week GFS retention policy.

Therefore, as of March 20, the backup data you need to recover would be in the capacity tier, not on the local performance tier, because it has been offloaded to the object storage configured as the capacity tier to reduce long-term retention costs.
