## NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q623-Q628):

### NEW QUESTION # 623

Which stage of labor lasts from delivery of the baby to delivery of the placenta?

- A. Fourth
- **B. Third**
- C. Fifth
- D. Second

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

(A) This stage is from complete dilatation of the cervix to delivery of the fetus. (B) This is the correct stage for the definition. (C) This stage lasts for about 2 hours after the delivery of the placenta. (D) There is no fifth stage of labor.

### NEW QUESTION # 624

The predominant purpose of the first Apgar scoring of a newborn is to:

- A. Determine gross abnormal motor function
- B. Obtain a baseline for comparison with the infant's future adaptation to the environment
- **C. Evaluate the infant's vital functions**
- D. Determine the extent of congenital malformations

**Answer: C**

Explanation:

(A)

Apgar scores are not related to the infant's care, but to the infant's physical condition.

(B)

Apgar scores assess the current physical condition of the infant and are not related to future environmental adaptation. (C) The purpose of the Apgar system is to evaluate the physical condition of the newborn at birth and to determine if there is an immediate need for resuscitation. (D) Congenital malformations are not one of the areas assessed with Apgar scores.

### NEW QUESTION # 625

A client tells the nurse that she has had a history of urinary tract infections. The nurse would do further health teaching if she verbalizes she will:

- **A. Limit her fluid intake after 6 PM so that there is not a great deal of urine in her bladder while she sleeps**
- B. Drink at least 8 oz of cranberry juice daily
- C. Maintain a fluid intake of at least 2000 mL daily
- D. Wash her hands before and after voiding

**Answer: A**

Explanation:

Explanation

(A) Cranberry juice helps to maintain urine acidity, thereby retarding bacterial growth. (B) A generous fluid intake will help to irrigate the bladder and to prevent bacterial growth within the bladder. (C) Hand washing is an effective means of preventing pathogen transmission. (D) Restricting fluid intake would contribute to urinary stasis, which in turn would contribute to bacterial growth.

### NEW QUESTION # 626

A client on the infectious disease unit is discussing transmission of human immunodeficiency virus (HIV).

The nurse would need to provide more client education based on which client statement?

- A. "HIV is a virus that is easily transmitted by casual contact."
- B. "Condoms reduce the transmission of HIV."
- C. "HIV is a virus transmitted by sexual contact."
- D. "HIV can be transmitted to an unborn infant."

**Answer: A**

Explanation:

Explanation

(A) HIV is transmitted through unprotected sexual contact. (B) Condoms are an effective barrier to prevent HIV transmission. (C) HIV is not easily transmitted by casual contact. (D) HIV can be transmitted intrauterinely at the time of delivery, and by breast-feeding.

#### NEW QUESTION # 627

A 2-year-old child with a scalp laceration and subdural hematoma of the temporal area as a result of falling out of bed should be prevented from:

- A. Crying
- B. Falling asleep
- C. Rolling from his back to his tummy
- D. Sucking his thumb

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

(A) A child with a subdural hematoma has increased ICP. Crying may significantly increase this pressure.

(B) Adequate sleep is essential, but it is important that the child can be aroused from sleep after head injury. (C) This child is free to roll from his back to his abdomen. (D) Thumb-sucking serves to reduce anxiety and should not be prevented at this time.

#### NEW QUESTION # 628

.....
