

# Passing ISA-IEC-62443 Score & Valid ISA-IEC-62443 Exam Sims

2026 Latest PracticeVCE ISA-IEC-62443 PDF Dumps and ISA-IEC-62443 Exam Engine Free Share:  
<https://drive.google.com/open?id=17WytQVv5D4QTJR4TQE4N2qE1nucIc8g>

Are you ready to take your career to the next level with the ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443)? Look no further than PracticeVCE for all of your ISA-IEC-62443 exam needs. Our comprehensive and cost-effective solution includes regularly updated ISA ISA-IEC-62443 Exam Questions, available in a convenient PDF format that can be downloaded on any device, including PC, laptop, mac, tablet, and smartphone.

It is an incredible opportunity among all candidates fighting for the desirable exam outcome to have our ISA-IEC-62443 practice materials. With the help of our hardworking experts, our ISA-IEC-62443 exam braindumps have been on the front-front of this industry and help exam candidates around the world win in valuable time. With years of experience dealing with exam, they have thorough grasp of knowledge which appears clearly in our ISA-IEC-62443 Actual Exam. To choose us is to choose success!

## Develop Your Abilities and Obtain ISA ISA-IEC-62443 Certification Without Difficulty

The ISA braindumps torrents available at PracticeVCE are the most recent ones and cover the difficulty of ISA-IEC-62443 test questions. Get your required exam dumps instantly in order to pass ISA-IEC-62443 actual test in your first attempt. Don't waste your time in doubts and fear; Our ISA-IEC-62443 Practice Exams are absolutely trustworthy and more than enough to obtain a brilliant result in real exam.

## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q140-Q145):

### NEW QUESTION # 140

Which is the PRIMARY reason why Modbus over Ethernet is easy to manage in a firewall?

Available Choices (select all choices that are correct)

- A. Modbus uses explicit source and destination IP addresses and a single known TCP port.
- B. Modbus has no known security vulnerabilities, so firewall rules are simple to implement.
- C. Modbus is a proprietary protocol that is widely supported by vendors.
- D. Modbus uses a single master to communicate with multiple slaves using simple commands.

Answer: A

#### NEW QUESTION # 141

Which standard focuses on protecting sensitive information across all organizational systems through a broad information security management system (ISMS)?

- A. ISA/IEC 62443
- B. None of the above
- C. Both ISA/IEC 62443 and ISO/IEC 27001
- **D. ISO/IEC 27001**

**Answer: D**

Explanation:

ISO/IEC 27001 is the international standard specifically designed for creating and managing an Information Security Management System (ISMS) across an entire organization, including IT systems, data centers, and administrative controls.

"ISO/IEC 27001 specifies the requirements for establishing, implementing, maintaining and continually improving an ISMS."

- ISO/IEC 27001:2022, Clause 1 - Scope

While ISA/IEC 62443 focuses on industrial control systems (IACS) and operational technology (OT) security, it complements but does not replace the ISMS scope of ISO/IEC 27001.

ISO/IEC 27001:2022 - Clauses 1-3

ISA/IEC 62443-2-1 - Integration with existing ISMS frameworks

#### NEW QUESTION # 142

Within the National Institute of Standards and Technology Cybersecurity Framework v1.0 (NIST CSF), what is the status of the ISA 62443 standards?

Available Choices (select all choices that are correct)

- A. They are used as normative references.
- **B. They are used as informative references.**
- C. They are not used.
- D. They are under consideration for future use.

**Answer: B**

Explanation:

The NIST CSF is a voluntary framework that provides a set of standards, guidelines, and best practices to help organizations manage cybersecurity risks. The NIST CSF consists of five core functions: Identify, Protect, Detect, Respond, and Recover. Each function is further divided into categories and subcategories that describe specific outcomes and activities. The NIST CSF also provides informative references that link the subcategories to existing standards, guidelines, and practices that can help organizations achieve the desired outcomes. The informative references are not mandatory or exhaustive, but rather serve as examples of possible sources of guidance. The ISA 62443 standards are used as informative references in the NIST CSF v1.0 for several subcategories, especially in the Protect and Detect functions. The ISA 62443 standards are a series of standards that provide a framework for securing industrial automation and control systems (IACS).

The ISA 62443 standards cover various aspects of IACS security, such as terminology, concepts, requirements, policies, procedures, and technical specifications. The ISA 62443 standards are aligned with the NIST CSF in terms of the core functions and the risk-based approach. Therefore, the ISA 62443 standards can provide useful guidance and best practices for organizations that use IACS and want to implement the NIST CSF. References:

#### NEW QUESTION # 143

Which steps are included in the ISA/IEC 62443 assess phase?

Available Choices (select all choices that are correct)

- A. Cybersecurity requirements specification and allocation of IACS assets to zones and conduits
- B. Cybersecurity requirements specification and detailed cyber risk assessment
- C. Detailed cyber risk assessment and cybersecurity maintenance, monitoring, and management of change
- D. Allocation of IACS assets to zones and conduits, and detailed cyber risk assessment

**Answer: A**

Explanation:

The ISA/IEC 62443 standards are focused on industrial automation and control systems security. The assess phase within the ISA/IEC 62443 framework is designed to identify and analyze potential vulnerabilities in the industrial control system (ICS) environment. One of the key steps in this phase is the specification of cybersecurity requirements. Additionally, it involves the allocation of industrial automation and control system (IACS) assets to defined zones and conduits to manage and segregate the network and improve security. These measures help to ensure that security requirements are met and that the assets are protected according to their security needs. Therefore, the correct answer is B, which mentions both the cybersecurity requirements specification and the allocation of IACS assets to zones and conduits as part of the assess phase.

#### NEW QUESTION # 144

Which factor drives the selection of countermeasures?

Available Choices (select all choices that are correct)

- A. Security levels
- B. Output from a risk assessment
- C. Foundational requirements
- D. System design

**Answer: B**

#### NEW QUESTION # 145

.....

To save the clients' time, we send the products in the form of mails to the clients in 5-10 minutes after they purchase our ISA-IEC-62443 study materials and we simplify the information to let the clients only need dozens of hours to learn and prepare for the test. To help the clients solve the problems which occur in the process of using our ISA-IEC-62443 Study Materials, the clients can consult u about the issues about our study materials at any time.
