Don't Know Where to Start Your Splunk SPLK-2003 Exam Preparation? We've Got You Covered

If you are preparing for the Splunk Phantom Certified Admin (SPLK-2003) exam dumps our SPLK-2003 Questions help you to get high scores in your Splunk SPLK-2003 exam. Test your knowledge of the Splunk Phantom Certified Admin exam dumps with BraindumpStudy Splunk SPLK-2003 Practice Questions. The software is designed to help with SPLK-2003 exam dumps preparation.

Splunk Phantom Certified Admin Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which is the primary system requirement that should be increased with heavy usage of the file vault?

- A. Bandwidth of network.
- B. Amount of memory.
- C. Number of processors.
- D. Amount of storage.

Answer: D

Explanation:

The primary system requirement that should be increased with heavy usage of the file vault is the amount of storage. The file vault is a secure repository for storing files on Phantom. The more files are stored, the more storage space is needed. The other options are not directly related to the file vault usage. See [File vault] for more information.

Heavy usage of the file vault in Splunk SOAR necessitates an increase in the amount of storage available. The file vault is used to securely store files associated with cases, such as malware samples, logs, and other artifacts relevant to an investigation. As the volume of files and the size of stored data grow, ensuring sufficient storage capacity becomes critical to maintain performance and ensure that all necessary data is retained for analysis and evidence.

NEW QUESTION # 14

Which of the following roles is appropriate for a Splunk SOAR account that will only be used to execute automated tasks?

- A. Non-Human
- B. Automation Engineer
- C. Automation
- D. Service Account

Answer: C

Explanation:

In Splunk SOAR, the appropriate role for an account that will only be used to execute automated tasks is the "Automation" role. This service account role is specifically designed for automated tasks, including REST API operations, playbook execution, and ingestion. It is intended for use by systems rather than human users and provides the necessary permissions for automated interactions with the SOAR platform.

In Splunk SOAR, the "Automation" role is designed specifically for accounts that are intended for executing automated tasks. These tasks can include REST API operations, playbook actions, and data ingestion processes. The Automation role is a type of service account role intended for system-to-system interactions and is not meant to be used by human operators. It provides a tailored set of permissions that allows for the execution of automated processes without granting broader access that would be unnecessary or insecure for an automated account.

The designation of this role is critical in maintaining proper security and operational boundaries within the SOAR platform. By restricting the automated account to just the Automation role, Splunk SOAR ensures that automated processes run with the least privilege necessary, reducing the risk of unauthorized actions and maintaining a clear separation between human users and automated systems.

NEW QUESTION # 15

How can an individual asset action be manually started?

- A. With the > action button in the Investigation page.
- B. With the > action button in the analyst queue page.
- C. With the > asset button in the asset configuration section.
- D. By executing a playbook in the Playbooks section.

Answer: A

Explanation:

An individual asset action can be manually started with the > action button in the Investigation page. This allows the user to select an asset and an action to perform on it. The other options are not valid ways to start an asset action manually. See Performing asset actions for more information. Individual asset actions in Splunk SOAR can be manually initiated from the Investigation page of a container. The "> action" button on this page allows users to execute specific actions associated with assets directly, enabling on-the-

fly operations on artifacts or indicators within a container. This feature is particularly useful for ad-hoc analysis and actions, allowing analysts to respond to or investigate specific aspects of an incident without the need for a full playbook.

NEW QUESTION # 16
Some of the playbooks on the Phantom server should only be executed by members of the admin role. How can this rule be applied?

- A. Make sure the Execute Playbook capability is removed from al roles except admin.
- B. Add a tag with restricted access to the restricted playbooks.
- C. Place restricted playbooks in a second source repository that has restricted access.
- D. Add a filter block to al restricted playbooks that Titters for runRole - "Admin".

Answer: A

Explanation:
The correct answer is C because the best way to restrict the execution of playbooks to members of the admin role is to make sure the Execute Playbook capability is removed from all roles except admin. The Execute Playbook capability is a permission that allows a user to run any playbook on any container. By default, all roles have this capability, but it can be removed or added in the Phantom UI by going to Administration > User Management > Roles. Removing this capability from all roles except admin will ensure that only admin users can execute playbooks. See Splunk SOAR Documentation for more details. To ensure that only members of the admin role can execute specific playbooks on the Phantom server, the most effective approach is to manage role-based access controls (RBAC) directly. By configuring the system to remove the
"Execute Playbook" capability from all roles except for the admin role, you can enforce this rule. This method leverages Phantom's built-in RBAC mechanisms to restrict playbook execution privileges. It is a straightforward and secure way to ensure that only users with the necessary administrative privileges can initiate the execution of sensitive or critical playbooks, thus maintaining operational security and control.

NEW QUESTION # 17
When is using decision blocks most useful?

- A. When processing different data in parallel.
- B. When selecting one (or zero) possible paths in the playbook.
- C. When evaluating complex, multi-value results or artifacts.
- D. When modifying downstream data hi one or more paths in the playbook.

Answer: B

NEW QUESTION # 18
......

Our SPLK-2003 test braindumps are by no means limited to only one group of people. Whether you are trying this exam for the first time or have extensive experience in taking exams, our SPLK-2003 latest exam torrent can satisfy you. This is due to the fact that our SPLK-2003 test braindumps are humanized designed and express complex information in an easy-to-understand language. You will never have language barriers, and the learning process is very easy for you. What are you waiting for? As long as you decide to choose our SPLK-2003 Exam Questions, you will have an opportunity to prove your abilities, so you can own more opportunities to embrace a better life.
