

# Practice PCNSA Exams Free & Updated PCNSA Testkings

## Conclusion

Passing the PCNSA exam isn't much of a big deal if you prepare well and read the right resources. Remember that the PCNSA certification is only valid for two years from the date you passed the actual evaluation. It would help if you planned adequately to avert any situation that will make you an uncertified professional. If clients discover that you are posing as a certified specialist during the period of expiration, they may perceive you as a fraud. To avoid a situation like this, you should make adequate preparation to get your recertification done quickly. That way, you'll maintain a good reputation with employers of your services and get familiar with new solutions and processes within the Network and Security industry.

### Palo Alto Networks Certified Network Security Administrator Sample Questions (Q115-Q120):

#### NEW QUESTION # 115

An administrator is reviewing the Security policy rules shown in the screenshot below. Which statement is correct about the information displayed?

- A. Highlight Unused Rules is checked.
- B. There are seven Security policy rules on this firewall.
- C. Eleven rules use the "Infrastructure\*" tag.
- D. The view Rulebase as Groups is checked.

**Answer: D**

#### NEW QUESTION # 116

Based on the graphic, what is the purpose of the SSL/TLS Service profile configuration option?

- A. It defines the certificate to send to the client's browser from the management interface.
- B. It defines the firewall's global SSL/TLS timeout values.
- C. It defines the SSL/TLS encryption strength used to protect the management interface.
- D. It defines the CA certificate used to verify the client's browser.

**Answer: A**

Explanation:

SSL/TLS service profiles specify a server certificate and a protocol version or range of versions for firewall or Panorama services that use SSL/TLS (such as administrative access to the web interface). By defining the protocol versions, the profiles enable you to restrict the cipher suites that are available for securing communication with the client systems requesting the services.

#### NEW QUESTION # 117

How does an administrator schedule an Applications and Threats dynamic update while delaying installation of the update for a certain amount of time?

- A. Configure the option for "Threshold"
- B. Disable automatic updates during weekdays
- C. Automatically "download and install" but with the "disable new applications" option used
- D. Automatically "download only" and then install Applications and Threats later, after the administrator approves the update

**Answer: A**

Explanation:

Schedule content updates so that they download-and-install automatically. Then, set a Threshold that determines the amount of time the firewall waits before installing the latest content. In a mission-critical network, schedule up to a 48 hour threshold.
