MB-500 Latest Material & MB-500 Original Questions

With experienced experts to compile and check the MB-500 questions and answers, we have received many good feedbacks from our customers, and they also send some thankful email to us for helping them to pass the exam successfully. The pass rate is 98.75%, and money back guarantee if you fail to pass the exam. We also provide you the free update for one year after purchasing the MB-500 Study Guide. If you have any questions, you can consult the service staff.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q138-Q143):

NEW QUESTION # 138

You need to map the target data fields in the Data management workspace for the custom data entity.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer area
Refresh the entity list from the Data management workspace.	
Validate data management from the Data management workspace.	
Publish the entity.	
Generate the correct target field mapping.	
In the Data entities list, select Modify target mapping for the custom data entity.	
In the Data entities list, select Target fields for the custom data entity.	

Answer:

Explanation:

Actions	Answer area
Refresh the entity list from the Data management workspace.	
Validate data management from the Data management workspace.	
Publish the entity.	In the Data entities list, select Target fields for the custom data entity.
Generate the correct target field mapping.	Publish the entity.
In the Data entities list, select Modify target mapping for the custom data entity.	Generate the correct target field mapping.
In the Data entities list, select Target fields for the custom data entity.	

Explanation:

Answer area
1 In the Data entities list, select Target fields for the custom data entity.
2 Publish the entity.
3 Generate the correct target field mapping.

NEW QUESTION # 139

You are creating a new form in Visual Studio.

You need to apply the Simple List pattern and apply the pattern to a form.

What are the two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Use form statistics.
- B. Use the designer.
- C. Use the Application Object Tree (AOT).
- D. Use metadata properties.

Answer: A,B

Explanation:

C: In Microsoft Visual Studio, on the Dynamics 365 menu, expand the Add-ins option, and click Run form patterns report. A background process generates the report. After several seconds, a message box appears in Visual Studio to indicate that the report has been generated and inform you about the location of the Form Patterns report file. You can filter this file by pattern to find forms that use a particular pattern.

B: Right-click Design, point to Apply pattern, and then click Details Master.

NEW QUESTION # 140

You are creating a Dynamics 365 Finance and Operations report. You cannot query the data for the report directly.

You must include parameters to specify data for the report.

You need to create the report.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Which type of class should you create to pass parameters to the report?

- Data contract class
- Report data provider class
- Report controller class
- Report UI builder class

Which type of class should you create to access and process the data for the report?

- Data contract class
- Report data provider class
- Report controller class
- Report UI builder class

Which attribute should you use to identify the class that defines report variables?

- DataContractAttribute
- DataMemberAttribute
- SysOperationContractProcessingAttribute
- SysOperationGroupAttribute

Which attribute should you use to identify parm methods to send data for the report?

- DataContractAttribute
- DataMemberAttribute
- SysOperationContractProcessingAttribute
- SysOperationGroupAttribute

Which attribute should you use to define the contract class for a provider class?

- SRSReportQueryAttribute
- SRSReportParameterAttribute
- SRSReportDataProviderBase

Answer:

Explanation:

Which type of class should you create to pass parameters to the report?

Which type of class should you create to access and process the data for the report?

Which attribute should you use to identify the class that defines report variables?

Which attribute should you use to identify parm methods to send data for the report?

Which attribute should you use to define the contract class for a provider class?

Explanation:

Which type of class should you create to pass parameters to the report?

Which type of class should you create to access and process the data for the report?

Which attribute should you use to identify the class that defines report variables?

Which attribute should you use to identify parm methods to send data for the report?

Which attribute should you use to define the contract class for a provider class?

Box 1: Data contract class

A data contract class defines the parameters for a report that is bound to a report data provider (RDP) class. You can specify one or more groups of report parameters, the order of the groups, and the order in which the report parameters appear in a print dialog box.

Box 2: Report data provider class

Report data provider class - processes business logic based on parameters and a query, and then returns the tables as a dataset for the report.

Box 3: DataContractAttribute

DataContractAttribute - This attribute is applied to an X++ class and specifies that the class can be used as a data contract (that it should be serialized).

Box 4: DataMemberAttribute

DataMemberAttribute - This attribute is applied to a parm (parameter) method on an X++ data contract class and specifies that the data member should be serialized.

Box 5: SRSReportParameterAttribute

You set the SRSReportParameterAttribute attribute to the data contract you created for the RDP class.

NEW QUESTION # 141

You need to implement the reporting requirements for the Vendor exclusion list.

Which options you should use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Option
Implement reporting.	<div style="border: 1px solid black; padding: 2px;"> <div style="background-color: #f0f0f0; height: 20px; display: flex; justify-content: flex-end; align-items: center; padding-right: 5px;">▼</div> <div style="padding: 2px;">Power Platform</div> <div style="padding: 2px;">SQL Server Reporting Services</div> <div style="padding: 2px; border-bottom: 2px solid black;">Financial Reporting</div> </div>
Automatically set the query range based on session context.	<div style="border: 1px solid black; padding: 2px;"> <div style="background-color: #f0f0f0; height: 20px; display: flex; justify-content: flex-end; align-items: center; padding-right: 5px;">▼</div> <div style="padding: 2px;">Controller class</div> <div style="padding: 2px;">ReportDataProvider class</div> <div style="padding: 2px; border-bottom: 2px solid black;">UIBuilder class</div> </div>

Answer:

Explanation:

Requirement	Option
Implement reporting.	<div style="border: 1px solid black; padding: 2px;"> <div style="background-color: #f0f0f0; height: 20px; display: flex; justify-content: flex-end; align-items: center; padding-right: 5px;">▼</div> <div style="padding: 2px;">Power Platform</div> <div style="padding: 2px;">SQL Server Reporting Services</div> <div style="padding: 2px; border: 2px solid red;">Financial Reporting</div> </div>
Automatically set the query range based on session context.	<div style="border: 1px solid black; padding: 2px;"> <div style="background-color: #f0f0f0; height: 20px; display: flex; justify-content: flex-end; align-items: center; padding-right: 5px;">▼</div> <div style="padding: 2px;">Controller class</div> <div style="padding: 2px;">ReportDataProvider class</div> <div style="padding: 2px; border: 2px solid red;">UIBuilder class</div> </div>

Explanation:

Scenario: Provide functionality to periodically export the Vendor exclusion list to prepare reports by using standard reporting capabilities of Dynamics 365 Finance.

Box 1: Financial Reporting

The financial reporting functions are available to users who have the appropriate privileges and duties assigned to them through their security roles.

Box 2: UIBuilder class

Example:

Defining parameters defaulting using code

* In Solution Explorer, double-click on the FMRentalsByCustUIBuilder class to open the designer.

* Locate the class build method and update the initialization code.

The parameter initialization code sets the default values of the report execution relative to today's date. Use the classes UIBuilder to override the framework's default handling of report parameters. Additional extension scenarios supported include:

Automatically set query ranges based on session context using Controller classes Reference:

NEW QUESTION # 142

You need to map the Dynamics 365 Finance components into the standard models.

Which component belongs to which model? To answer, drag the appropriate models to the correct components. Each model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Models	Component	Model
Application Platform	Number Sequence	
Application Suite	Global Address Book	
Application Foundation	Workflow & Services	
	SSRS Reporting	

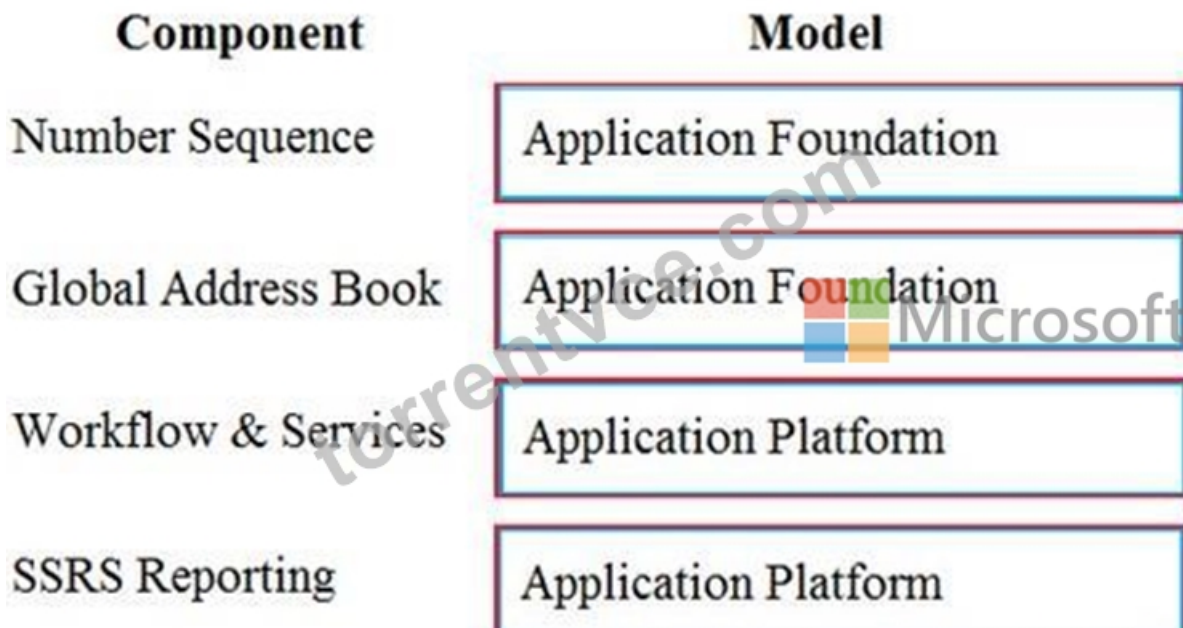

Answer:

Explanation:

Models	Component	Model
Application Platform	Number Sequence	Application Foundation
Application Suite	Global Address Book	Application Foundation
Application Foundation	Workflow & Services	Application Platform
	SSRS Reporting	Application Platform

Explanation

Graphical user interface Description automatically generated with medium confidence
