Free PDF Salesforce - Platform-App-Builder - Perfect Salesforce Certified Platform App Builder Answers Free

As we all know, the preparation process for an exam is very laborious and time-consuming. We had to spare time to do other things to prepare for Platform-App-Builder exam, which delayed a lot of important things. If you happen to be facing this problem, you should choose our Platform-App-Builder Real Exam. Our Platform-App-Builder study materials are famous for its high-efficiency and high-quality. If you buy our Platform-App-Builder learning guide, you will find that the exam is just a piece of cake in front of you.

Salesforce is one of the world's leading cloud-based software companies, offering a range of solutions for businesses of all sizes. The Salesforce Platform-App-Builder Certification is a key certification for individuals who want to demonstrate their expertise in building custom applications on the Salesforce platform. Salesforce Certified Platform App Builder certification demonstrates an individual's ability to design, build, and implement custom applications using the Salesforce platform.

Salesforce Certified Platform App Builder Sample Questions (Q79-Q84):

NEW QUESTION # 79
Universal Containers created a custom object called Component to capture details about products sold.

What approach should an app builder take to show Component as a related list on Product?

- A. Create a master-detail relationship on Product to Component. Add the Component related list to the Product page layout.
- B. Create a lookup relationship on Component to Product. Add the Component related list to the Product page layout.
- C. Create a junction object to relate Component and Product. Add the Component related list to the Product page layout.
- D. Create a roll-up on Product. Add the Component related list to the Product page layout.

Answer: B

Explanation:
Explanation
To show Component as a related list on Product, a lookup relationship on Component to Product should be created. A lookup relationship creates a loose association between two objects and allows users to relate records from one object to another. A lookup relationship also allows users to add the related list of the child object to the parent object's page layout.

NEW QUESTION # 80
Universal Containers has a customer base where many customers have the same or similar company names.
Which functionality should be configured to improve an end user`s search experience?
Choose 2 answers

- A. Update the account search layouts accounts tab columns displayed.
- B. Update the account search filter fields.
- C. Update the account search layouts search results columns displayed.
- D. Update the account search layout's view filter settings.

Answer: B,C

Explanation:
Explanation
Updating the account search layouts search results columns displayed and updating the account search filter fields can improve an end user's search experience by showing more relevant information and allowing more refined filtering. The view filter settings and the accounts tab columns displayed are not related to the search functionality

NEW QUESTION # 81
At Universal Containers, the VP of Service has requested a visual indicator flag on each case, based on the case priority. High-priority cases should be flagged red, medium-priority should be flagged yellow, and low-priority cases should be flagged green.
Which formula would accomplish this requirement? Choose 2 answers

- A. IMAGE(IF(ISPICKVAL(Priority, "Low"), "img/samples/flag_green.gif", IF(ISPICKVAL(Priority, "Medium"), "img/samples/flag_yellow.gif", IF(ISPICKVAL(Priority, "High"), "img/samples/flag_red.gif"))), "Priority Flag")
- B. CASE(Priority, "Low", "img/samples/flag_green.gif", "Medium", "img/samples/flag_yellow.gif", "High", "img/samples/flag_red.gif", "/s.gif")
- C. IMAGE (CASE(Priority, "Low", "img/samples/flag_green.gif", "Medium", "img/samples/flag_yellow.gif", "High", "img/samples/flag_red.gif", "Priority Flag")
- D. IF (ISPICKVAL(Priority, "Low"), "img/samples/flag_green.gif", IF(ISPICKVAL(Priority, "Medium"), "img/samples/flag_yellow.gif", IF(ISPICKVAL(Priority,"High"), "img/samples/flag_red.gif", "/s.gif")))

Answer: B,C

Explanation:
The formula for creating a visual indicator flag on each case based on the case priority should use the IMAGE and CASE functions. The IMAGE function returns an image for a given URL, and the CASE function evaluates an expression and returns a value based on that expression. Option A and D use these functions correctly, while option B and C do not.

NEW QUESTION # 82
Cloud Kicks has five years of sales data and would like to track when customers made their first purchase.
How should an app builder use a roll-up summary to meet the requirements?

- A. Create a new roll-up summary field called First Order Date, using Type SUM on Opportunity Close Date.
- B. Create a new roll-up summary field called First Order Date, using Type MIN on the Opportunity Close Date with a filter where IsWon = TRUE.
- C. Create a new date field called First Order Date, then create a roll-up summary to update the field using Type MIN.
- D. Create a new date field called First Order Date, create a new Workflow to set the date, and roll up the value with a filter where IsWon = TRUE.

Answer: B

Explanation:
The app builder should create a new roll-up summary field called First Order Date, using Type MIN on the Opportunity Close Date with a filter where IsWon = TRUE. A roll-up summary field is a type of field that calculates values from related records and displays them on the parent record. In this case, the app builder can create a roll-up summary field on the Account object that calculates the minimum (earliest) value of the Opportunity Close Date field from the related opportunities where IsWon = TRUE. This will show when customers made their first purchase. Option B, C, and D are not correct ways to use a roll-up summary field to meet the requirement.

NEW QUESTION # 83
Universal Containers uses a custom picklist called Account_Region__c on the Account object. The vice president of sales has asked that the value of this field is visible on Opportunities.
How should an app builder create this solution?

- A. Field-level security
- B. Cross-object formula field
- C. Lookup field
- D. Field history tacking

Answer: B

Explanation:
A cross-object formula field is a formula field that references fields from another object. This can be used to display the value of the Account_Region__c field on Opportunities, as long as there is a relationship between the two objects. Option A, B, and C are not relevant for this requirement.

NEW QUESTION # 84
