EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q84-Q89):

NEW QUESTION # 84

What is the most preferred unit of measure for cooling capacity?

- A. Ton
- B. BTU
- **C. Watt**
- D. Horsepower

Answer: C

Explanation:

Cooling capacity is the measure of a cooling system's ability to remove heat from a space. The most preferred unit of measure for cooling capacity is watt (W), which is the SI unit for power. Watt is defined as the amount of energy transferred or converted per unit time. One watt is equal to one joule of energy per second. Using watt as the unit of measure for cooling capacity allows for easy comparison and calculation of the cooling performance and efficiency of different cooling systems.

Other units of measure for cooling capacity are ton, BTU, and horsepower, but they are less common and less convenient than watt. Ton is a unit of measure that describes how much water at freezing temperature can be frozen in 24 hours, equivalent to 3.5 kW or 12,000 BTU/h. BTU (British Thermal Unit) is a unit of measure that describes the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit, equivalent to 0.293 W. Horsepower is a unit of measure that describes the rate at which work is done, equivalent to 746 W.

NEW QUESTION # 85

The three elements of the fire triangle are, and. (Choose three.)

- A. Oxygen
- B. Water
- C. Earth
- D. Heat
- E. Fuel

Answer: A,D,E

Explanation:

The fire triangle is a simple model that illustrates the three elements that a fire needs to ignite and sustain: oxygen, heat, and fuel. Oxygen is the oxidizing agent that enables the combustion reaction, heat is the energy source that raises the temperature of the fuel to its ignition point, and fuel is the material that reacts with oxygen and releases heat and light. Removing any one of these elements can extinguish a fire. For example, water can reduce the heat and the oxygen, sand or soil can smother the fuel and the oxygen, and fire extinguishers can displace the oxygen or lower the temperature.

NEW QUESTION # 86

What is a requirement of an FM200 (HFC-227) installation?

- A. It is a high-pressure gas; therefore nozzles must be mounted with two brackets.
- B. Install the gas containers (tanks) close to the data centre.
- C. Drainage system under the raised floor.
- D. Install pre-action sprinklers in the same room as the FM200.

Answer: A

Explanation:

FM200 (HFC-227) is a clean agent fire suppression system that uses a high-pressure gas to extinguish fires by reducing the oxygen concentration and absorbing the heat. FM200 is stored in cylinders at pressures of up to 42 bar (600 psi) and is released through nozzles into the protected area. Because of the high pressure, the nozzles must be mounted with two brackets to prevent them from moving or breaking during discharge. The brackets must be securely attached to the ceiling or wall and aligned with the nozzle outlet. The nozzle outlet must also be free of any obstructions that could affect the discharge pattern or distribution.

NEW QUESTION # 87

What is the effect of a high relative humidity in the data centre?

- A. In a data centre environment relative humidity is not important, only temperature matters.
- B. There is a risk of electrostatic discharge.
- **C. There is a risk of corrosion.**
- D. There is a risk of not properly functioning of the smoke detectors.

Answer: C

Explanation:

High relative humidity in a data center can lead to corrosion of metal parts and electronic contacts, potentially causing failures.

Electrostatic discharge is a risk with low humidity, not high.

NEW QUESTION # 88

Measuring "Business Values" begins first with.

- A. Network
- B. Physical Infrastructure
- **C. Budget**
- D. Topology

Answer: C

Explanation:

Measuring "Business Values" begins first with budgeting and identifying the costs associated with the project.

This includes understanding the economic impact of the project, such as the cost of labor, materials, and other resources. It is also important to evaluate the return on investment (ROI) of the project, which will help to determine its overall value. Additionally, it is important to consider the long-term impact of the project and its potential to add value to the business in the future.
