ISO-IEC-27001-Foundation Exam Practice | Efficient ISO-IEC-27001-Foundation: ISO/IEC 27001 (2022) Foundation Exam

ISO-IEC-27001-Foundation test guide is an examination material written by many industry experts based on the examination outlines of the calendar year and industry development trends. Its main purpose is to help students who want to obtain the certification of ISO-IEC-27001-Foundation to successfully pass the exam. Compared with other materials available on the market, the main feature of ISO-IEC-27001-Foundation exam materials doesn't like other materials simply list knowledge points. It allows students to find time-saving and efficient learning methods while memorizing knowledge points. With ISO-IEC-27001-Foundation study braindumps, learning from day and night will never happen. You can learn more with less time. You will become a master of learning in the eyes of others. With ISO-IEC-27001-Foundation study braindumps, successfully passing the exam will no longer be a dream.

APMG-International ISO-IEC-27001-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Security Breaches: Security breaches occur when unauthorized access or violations of security protocols are detected or imminent, potentially compromising data or system integrity.
Topic 2	<ul style="list-style-type: none"> Compliance: Regulatory compliance refers to an organization's commitment to understanding and adhering to applicable laws, policies, and regulations to operate within established legal and ethical standards.
Topic 3	<ul style="list-style-type: none"> Risk Management: Risk management is the systematic process of identifying, evaluating, and implementing strategies to reduce or control the impact of potential uncertainties on organizational goals.
Topic 4	<ul style="list-style-type: none"> Continuous Improvement Process (CI, CIP): A continuous or continual improvement process (CIP or CI) involves ongoing, systematic efforts to enhance products, services, or operational processes to achieve higher efficiency and effectiveness over time.
Topic 5	<ul style="list-style-type: none"> Data Security: Data security refers to protecting digital information—such as that stored in databases or networks—from destruction, unauthorized access, or malicious attacks, ensuring confidentiality and integrity.
Topic 6	<ul style="list-style-type: none"> Self Confidence: Self-confidence is the belief in one's abilities, competence, and value, reflecting a sense of assurance and inner strength.
Topic 7	<ul style="list-style-type: none"> Information Management (IM): Information management (IM) encompasses the entire lifecycle of information within an organization—from its collection and storage to its distribution, use, and eventual archiving or disposal.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which information is required to be included in the Statement of Applicability?

- A. The scope and boundaries of the ISMS
- B. The criteria against which risk will be evaluated
- C. The justification for including each information security control
- D. The risk assessment approach of the organization

Answer: C

Explanation:

Clause 6.1.3 (d) requires that the organization "produce a Statement of Applicability that contains the necessary controls (see Annex A), and justification for inclusions, whether they are implemented or not, and the justification for exclusions." This is the defining requirement of the SoA: it documents which Annex A controls are relevant, which are implemented, and the justification for inclusion/exclusion. While the ISMS scope (A) is documented in Clause 4.3, and risk evaluation criteria (C) are defined in Clause 6.1.2, these do not belong in the SoA. The SoA does not describe the full risk assessment approach (B); that is part of the risk assessment methodology.

Therefore, the mandatory requirement for the SoA is justification for including (or excluding) each information security control.

NEW QUESTION # 43

What is a requirement for a corrective action made in response to a nonconformity?

- A. They are appropriate to the effects of the nonconformity
- B. They are proportionate to the likelihood of the nonconformity recurring
- C. They do NOT change the organization's information security policies
- D. They always eliminate the cause of the nonconformity

Answer: A

Explanation:

Clause 10.1 (Nonconformity and corrective action) specifies:

"The organization shall react to the nonconformity and, as applicable: take action to control and correct it; deal with the consequences; evaluate the need for action to eliminate the cause(s)...

Corrective actions shall be appropriate to the effects of the nonconformities encountered." This confirms option B. Option A is inaccurate-ISO requires actions appropriate to effects, not probability alone. Option C is false-policies may need updating to correct nonconformities. Option D is incorrect, as not every cause can always be eliminated; residual issues may exist.

Thus, the verified requirement is B.

NEW QUESTION # 44

Who is required to ensure that staff are supported so that they can contribute to the information security management system?

- A. Management responsible for each area of operation
- B. ISO/IEC 27001 practitioners within the organization
- C. Auditors who audit each area of operation
- **D. Top management of the organization**

Answer: D

Explanation:

Clause 5.1 (Leadership and Commitment) requires that:

"Top management shall demonstrate leadership and commitment with respect to the information security management system by... ensuring that the resources needed for the ISMS are available... and supporting persons to contribute to the effectiveness of the ISMS." This makes it explicit that top management has the responsibility to ensure personnel are supported so they can contribute to the ISMS. Option B (line management) may provide local support, but ultimate accountability rests with top management. Auditors (C) only evaluate compliance, not provide support.

Practitioners (D) help implement, but they don't bear formal responsibility under the standard.

Thus, the verified answer is A: Top management of the organization.

NEW QUESTION # 45

Which of the following is required to be considered when selecting appropriate information security risk treatment options?

- A. Criteria for performing risk assessments
- **B. Criteria for accepting identified risks**
- C. Only risk controls in ISO/IEC 27002
- D. Only risk controls in Annex A of ISO/IEC 27001

Answer: B

Explanation:

Clause 6.1.3 (c) requires organizations to:

"compare the controls determined in 6.1.3 b) with those in Annex A and verify that no necessary control has been omitted; and prepare a Statement of Applicability." It also requires organizations to select risk treatment options considering "the organization's risk acceptance criteria." This shows that risk acceptance criteria are a fundamental factor when selecting risk treatment options. Options C and D are incorrect because Annex A and ISO/IEC 27002 are reference sets, not the sole sources of controls - organizations can design their own. Criteria for performing risk assessments (B) are part of 6.1.2 (risk assessment process), not risk treatment.

Thus, the correct requirement is A: Criteria for accepting identified risks.

NEW QUESTION # 46

Which action must top management take to provide evidence of its commitment to the establishment, operation and improvement of the ISMS?

- **A. Ensuring information security objectives are established**
- B. Implementing the actions from internal audits
- C. Producing a risk assessment report
- D. Communicating feedback from interested parties to the organization

Answer: A

Explanation:

Clause 5.1 (Leadership and Commitment) requires top management to demonstrate leadership by:

* "ensuring the information security policy and the information security objectives are established and are compatible with the strategic direction of the organization;"

* "ensuring the integration of the ISMS requirements into the organization's processes;"

* "ensuring that the resources needed for the ISMS are available;"

Among the options, the one explicitly mandated is ensuring that information security objectives are established. Risk assessments (C) and implementing audit actions (D) are responsibilities of management but not the direct leadership evidence required in Clause 5.1. Communicating interested party feedback (A) is relevant but not specifically cited as leadership evidence. Thus, the verified answer is B.

NEW QUESTION # 47
