

Free PDF Test AWS-Solutions-Architect-Professional Dumps Pdf & The Best Methods to help you pass Amazon AWS-Solutions-Architect-Professional

DOWNLOAD the newest Dumpcollection AWS-Solutions-Architect-Professional PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1F21EsDT3bshuwZtzSUGfp8uodxjKV3hW>

All these AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) exam dumps formats contain real, updated, and error-free AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) exam questions that prepare you for the final AWS-Solutions-Architect-Professional exam. To give you an idea about the top features of AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) exam dumps, a free demo download facility is being offered to Amazon Certification Exam candidates.

Similarly, Dumpcollection provides you 1 year free updates after your purchase of Amazon AWS-Solutions-Architect-Professional practice tests. These updates will help you prepare well if the content of the exam changes. The AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) demo of the practice exams is totally free and it helps you in examining the AWS-Solutions-Architect-Professional study materials.

>> Test AWS-Solutions-Architect-Professional Dumps Pdf <<

Newest Test AWS-Solutions-Architect-Professional Dumps Pdf | Amazing Pass Rate For AWS-Solutions-Architect-Professional Exam | Well-Prepared AWS-Solutions-Architect-Professional: AWS Certified Solutions Architect - Professional

With the help of Dumpcollection's marvelous brain dumps, you make sure your success in AWS-Solutions-Architect-Professional certification exam with money back guarantee. Dumpcollection serves a huge network of its clientele with the state of the art and exam-oriented short-term study content that requires as little as a two-week time to get ready the entire AWS-Solutions-Architect-Professional Certification syllabus.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q332-Q337):

NEW QUESTION # 332

A bank is re-architecting its mainframe-based credit card approval processing application to a cloud-native application on the AWS cloud.

The new application will receive up to 1,000 requests per second at peak load. There are multiple steps to each transaction, and each step must receive the result of the previous step. The entire request must return an authorization response within less than 2 seconds with zero data loss. Every request must receive a response.

The solution must be Payment Card Industry Data Security Standard (PCI DSS)-compliant.

Which option will meet all of the bank's objectives with the LEAST complexity and LOWEST cost while also meeting compliance requirements?

- A. Deploy the application on Amazon EC2 on Dedicated Instances. Use an Elastic Load Balancer in front of a farm of application servers in an Auto Scaling group to handle incoming requests. Scale out/in based on a custom Amazon CloudWatch metric for the number of inbound requests per second after measuring the capacity of a single instance.
- **B. Create an Application Load Balancer with an Amazon ECS cluster on Amazon EC2 Dedicated instances in a target group to process incoming requests. Use Auto Scaling to scale the cluster out/in based on average CPU utilization. Deploy a web service that processes all of the approval steps and returns a JSON object with the approval status.**
- C. Create an Amazon API Gateway to process inbound requests using a single AWS Lambda task that performs multiple steps and returns a JSON object with the approval status. Open a support case to increase the limit for the number of concurrent Lambdas to allow room for bursts of activity due to the new application.
- D. Create an Amazon API Gateway to process inbound requests using a series of AWS Lambda processes, each with an Amazon SQS input queue. As each step completes, it writes its result to the next step's queue. The final step returns a JSON object with the approval status. Open a support case to increase the limit for the number of concurrent Lambdas to allow room for bursts of activity due to the new application.

Answer: B

NEW QUESTION # 333

A government client needs you to set up secure cryptographic key storage for some of their extremely confidential data. You decide that the AWS CloudHSM is the best service for this. However, there seem to be a few pre-requisites before this can happen, one of those being a security group that has certain ports open. Which of the following is correct in regards to those security groups?

- A. A security group that has no ports open to your network.
- B. A security group that has only port 22 (for SSH) open to your network.
- C. A security group that has only port 3389 (for RDP) open to your network.
- **D. A security group that has port 22 (for SSH) or port 3389 (for RDP) open to your network.**

Answer: D

Explanation:

AWS CloudHSM provides secure cryptographic key storage to customers by making hardware security modules (HSMs) available in the AWS cloud.

AWS CloudHSM requires the following environment before an HSM appliance can be provisioned.

A virtual private cloud (VPC) in the region where you want the AWS CloudHSM service.

One private subnet (a subnet with no Internet gateway) in the VPC. The HSM appliance is provisioned into this subnet.

One public subnet (a subnet with an Internet gateway attached). The control instances are attached to this subnet.

An AWS Identity and Access Management (IAM) role that delegates access to your AWS resources to AWS CloudHSM.

An EC2 instance, in the same VPC as the HSM appliance, that has the SafeNet client software installed. This instance is referred to as the control instance and is used to connect to and manage the HSM appliance.

A security group that has port 22 (for SSH) or port 3389 (for RDP) open to your network. This security group is attached to your control instances so you can access them remotely.

NEW QUESTION # 334

A user has configured EBS volume with PIOPS. The user is not experiencing the optimal throughput. Which of the following could not be factor affecting I/O performance of that EBS volume?

- A. Instance type is not EBS optimized
- **B. EBS volume size**
- C. EC2 bandwidth
- D. EBS bandwidth of dedicated instance exceeding the PIOPS

Answer: B

Explanation:

If the user is not experiencing the expected IOPS or throughput that is provisioned, ensure that the EC2

bandwidth is not the limiting factor, the instance is EBS-optimized (or include 10 Gigabit network connectivity) and the instance type EBS dedicated bandwidth exceeds the IOPS more than he has provisioned.

NEW QUESTION # 335

A company has a multi-tier web application that runs on a fleet of Amazon EC2 instances behind an Application Load Balancer (ALB). The instances are in an Auto Scaling group. The ALB and the Auto Scaling group are replicated in a backup AWS Region. The minimum value and the maximum value for the Auto Scaling group are set to zero. An Amazon RDS Multi-AZ DB instance stores the application's data. The DB instance has a read replica in the backup Region. The application presents an endpoint to end users by using an Amazon Route 53 record.

The company needs to reduce its RTO to less than 15 minutes by giving the application the ability to automatically fail over to the backup Region. The company does not have a large enough budget for an active-active strategy.

What should a solutions architect recommend to meet these requirements?

- A. Configure an endpoint in AWS Global Accelerator with the two ALBs as equal weighted targets. Create an AWS Lambda function in the backup Region to promote the read replica and modify the Auto Scaling group values. Create an Amazon CloudWatch alarm that is based on the HTTPCode_Target_5XX_Count metric for the ALB in the primary Region. Configure the CloudWatch alarm to invoke the Lambda function.
- **B. Create an AWS Lambda function in the backup Region to promote the read replica and modify the Auto Scaling group values. Configure Route 53 with a health check that monitors the web application and sends an Amazon Simple Notification Service (Amazon SNS) notification to the Lambda function when the health check status is unhealthy. Update the application's Route 53 record with a failover policy that routes traffic to the ALB in the backup Region when a health check failure occurs.**
- C. Reconfigure the application's Route 53 record with a latency-based routing policy that load balances traffic between the two ALBs. Create an AWS Lambda function in the backup Region to promote the read replica and modify the Auto Scaling group values. Create an Amazon CloudWatch alarm that is based on the HTTPCode_Target_5XX_Count metric for the ALB in the primary Region. Configure the CloudWatch alarm to invoke the Lambda function.
- D. Configure the Auto Scaling group in the backup Region to have the same values as the Auto Scaling group in the primary Region. Reconfigure the application's Route 53 record with a latency-based routing policy that load balances traffic between the two ALBs. Remove the read replica. Replace the read replica with a standalone RDS DB instance. Configure Cross-Region Replication between the RDS DB instances by using snapshots and Amazon S3.

Answer: B

Explanation:

an AWS Lambda function in the backup region to promote the read replica and modify the Auto Scaling group values, and then configuring Route 53 with a health check that monitors the web application and sends an Amazon SNS notification to the Lambda function when the health check status is unhealthy. Finally, the application's Route 53 record should be updated with a failover policy that routes traffic to the ALB in the backup region when a health check failure occurs. This approach provides automatic failover to the backup region when a health check failure occurs, reducing the RTO to less than 15 minutes. Additionally, this approach is cost-effective as it does not require an active-active strategy.

NEW QUESTION # 336

A group of research institutions and hospitals are in a partnership to study 2 PBs of genomic data. The institute that owns the data stores it in an Amazon S3 bucket and updates it regularly. The institute would like to give all of the organizations in the partnership read access to the data. All members of the partnership are extremely cost-conscious, and the institute that owns the account with the S3 bucket is concerned about covering the costs for requests and data transfers from Amazon S3.

Which solution allows for secure datasharing without causing the institute that owns the bucket to assume all the costs for S3 requests and data transfers'?

- **A. Ensure that all organizations in the partnership have AWS accounts. Create a bucket policy on the bucket that owns the data. The policy should allow the accounts in the partnership read access to the bucket. Enable Requester Pays on the bucket. Have the organizations use their AWS credentials when accessing the data.**
- B. Ensure that all organizations in the partnership have AWS accounts. In the account with the S3 bucket, create a cross-account role for each account in the partnership that allows read access to the data. Enable Requester Pays on the bucket. Have the organizations assume and use that read role when accessing the data.
- C. Ensure that all organizations in the partnership have AWS accounts. In the account with the S3 bucket, create a cross-

account role for each account in the partnership that allows read access to the data. Have the organizations assume and use that read role when accessing the data.

- D. Ensure that all organizations in the partnership have AWS accounts. Configure buckets in each of the accounts with a bucket policy that allows the institute that owns the data the ability to write to the bucket Periodically sync the data from the institute's account to the other organizations. Have the organizations use their AWS credentials when accessing the data using their accounts

Answer: A

Explanation:

Explanation

In general, bucket owners pay for all Amazon S3 storage and data transfer costs associated with their bucket.

A bucket owner, however, can configure a bucket to be a Requester Pays bucket. With Requester Pays buckets, the requester instead of the bucket owner pays the cost of the request and the data download from the bucket. The bucket owner always pays the cost of storing data. If you enable Requester Pays on a bucket, anonymous access to that bucket is not allowed.

NEW QUESTION # 337

.....

If you don't have enough time to study for your certification exam, Dumpcollection provides Amazon AWS-Solutions-Architect-Professional Pdf questions. You may quickly download Amazon AWS-Solutions-Architect-Professional exam questions in PDF format on your smartphone, tablet, or desktop. You can Print Amazon AWS-Solutions-Architect-Professional PDF Questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go.

AWS-Solutions-Architect-Professional Latest Dumps Book: https://www.dumpcollection.com/AWS-Solutions-Architect-Professional_braindumps.html

After you tried our AWS-Solutions-Architect-Professional exam prep study, you will find it is very useful and just the right study material you need, Special discounts on bundle AWS-Solutions-Architect-Professional Latest Dumps Book - AWS Certified Solutions Architect - Professional purchase, Or you can choose to charge another exam Q&AS instead of AWS-Solutions-Architect-Professional exam dumps, Amazon Test AWS-Solutions-Architect-Professional Dumps Pdf This must remove all unnecessary programs, Dumpcollection.net is a top provider of AWS-Solutions-Architect-Professional practice questions and latest dumps.

The representation had to change as well, AWS-Solutions-Architect-Professional Well, now thanks to Microsoft employee Larry Kaye, There's an App for that, After you tried our AWS-Solutions-Architect-Professional Exam Prep study, you will find it is very useful and just the right study material you need.

HOT Test AWS-Solutions-Architect-Professional Dumps Pdf - Amazon AWS Certified Solutions Architect - Professional - Valid AWS-Solutions-Architect-Professional Latest Dumps Book

Special discounts on bundle AWS Certified Solutions Architect - Professional purchase, Or you can choose to charge another exam Q&AS instead of AWS-Solutions-Architect-Professional exam dumps, This must remove all unnecessary programs.

Dumpcollection.net is a top provider of AWS-Solutions-Architect-Professional practice questions and latest dumps.
