## Workday Pro HCM Reporting Certification Exam Sample Questions (Q49-Q54):

### NEW QUESTION # 49

The HR administrator is complaining about a report that is running slowly. The report uses the Trended Workers data source and includes a field on the related Worker business object.

How can you improve report performance without altering the report requirements?

- A. Run the Create Worker Trending Data task.
- B. Create a calculated field on the Trended Worker business object.
- C. Run the Purge Worker Trending Data task.
- D. **Add the field to the Trended Workers data source.**

### Answer: D

Explanation:

Performance issues often occur when trending reports pull fields from related business objects instead of directly from the Trended Workers data source. This requires Workday to join across objects at runtime, slowing down report execution. To improve performance, you should add the required field to the Trended Workers data source, ensuring the data is pre-joined and optimized for trending.

From the Workday binder: "To improve performance, add commonly reported fields directly to the Trended Workers object. Using related business object fields requires additional joins and increases report runtime." Creating calculated fields adds complexity rather than improving speed. Purging or re-creating trending data maintains system hygiene but does not address field-level performance.

Thus, the correct solution is A. Add the field to the Trended Workers data source.

### NEW QUESTION # 50

You would like to create an advanced report that contains information about employees and their dependents.

Where can you go to identify the field that links the two business objects, Worker and Dependent?

- A. The Columns tab of a report definition
- B. **The Related Business Objects tab of the Business Object Details report**
- C. The Related Business Object column of the Report Fields report
- D. The business object's Related Actions > Reporting > Report Fields and Values

### Answer: B

Explanation:

To connect multiple business objects in reporting, Workday provides the Business Object Details report. The Related Business Objects tab within this report shows how different business objects are linked (e.g., Worker to Dependent). This enables report writers to identify which fields connect the primary and secondary objects.

From the Workday Reporting documentation:

"The report data source provides the view into the primary business object. This object gives you access to class report fields as well as links to related business objects." Therefore, the correct answer is C. The Related Business Objects tab of the Business Object Details report.

### NEW QUESTION # 51

You need to create a report to show the trend of worker headcount over time.

What is the most appropriate data source for this report?

- A. Trended Workers
- B. Headcount
- C. Worker History
- D. Workers for HCM Reporting

**Answer: A**

Explanation:

The Trended Workers data source is specifically designed for reports that display trends over time, such as headcount, turnover, and demographics. It captures periodic snapshots of worker data (monthly, quarterly, etc.), which allows organizations to track workforce metrics historically.

From the Workday binder: "Trended Workers captures snapshots of worker data at periodic intervals, providing historical reporting across time dimensions. This enables reporting on headcount, attrition, and demographics in a time series format." By contrast, Workers for HCM Reporting is used for current-state data, not trending. Worker History provides effective-dated transaction-level history but does not automatically generate trending snapshots. Headcount is a standard delivered report and not a reusable data source for custom trending analysis.

Therefore, the most appropriate data source for worker headcount trends over time is A. Trended Workers.

### NEW QUESTION # 52

You are building a report that shows employee performance ratings and their associated performance review details. The report uses the Performance Review primary business object. Using a calculated field, what formula should you use to retrieve the employee's job title from the related Worker business object?

- A. Aggregate Related Instances
- B. Lookup Range Band
- C. Lookup Related Value
- D. Evaluate Expression Band

**Answer: C**

Explanation:

The correct choice is Lookup Related Value, because this function allows you to retrieve a field from a related business object that is not directly stored on your primary object. In this scenario, the primary business object is Performance Review, which holds performance-related data but not job-related data such as Job Title. Since Job Title resides on the Worker business object, you need to link from Performance Review to Worker and then retrieve Job Title.

The Workday reporting guide explains: "Lookup Related Value - Returns a field from a related business object. Use this to bring data from associated objects into a report when the field is not directly available on the primary object." . This ensures the Performance Review data can be combined with Job Title for meaningful insights.

By contrast, Aggregate Related Instances is used to roll up multiple related values, Range Band applies thresholds, and Evaluate Expression Band is used for conditional ranges, not cross-object retrieval.

### NEW QUESTION # 53

You have created a composite report and are trying to add a matrix report as a subreport. However, when trying to configure a Data column, the matrix report is not available to select in the Sub Report Name field.

What can you check to identify the cause of this issue?

- A. Check that the summarization fields in the matrix report also match the selections in the Field to Aggregate field in the Data column settings.

- B. Check that every field in the composite report's set of fields that are enabled for filtering and grouping also exists as a group-by field in the matrix report.
- C. Check that the prompt defaults in the matrix report align with the prompt defaults defined in the composite report's Report Settings.
- D. Check that the configurations on the Filter Data in Sub Report grid also exist in the Filter tab of the matrix report definition.

**Answer: B**

Explanation:

For a matrix report to be used as a subreport in a composite report, the group-by fields in the matrix report must align with the fields enabled for filtering and grouping in the composite report. If this alignment does not exist, Workday does not allow the matrix report to appear as a valid subreport option in the Sub Report Name dropdown.

From the Workday binder: "To include a matrix report as a subreport in a composite, the group-by fields of the matrix must match the fields enabled for grouping in the composite report. If these do not match, the matrix will not appear in the Sub Report Name selection." Other factors such as prompt defaults or filter settings may impact usability, but they do not prevent the matrix report from being selectable. The key dependency is the field alignment between the composite and the matrix group-by fields.

Therefore, the correct answer is A. Check that every field in the composite report's set of fields that are enabled for filtering and grouping also exists as a group-by field in the matrix report.

**NEW QUESTION # 54**

.....

The solution is closer to you than you can imagine, just contact the support team and continue enjoying your study with the Workday Pro HCM Reporting Certification Exam preparation material. Prep4pass offers affordable Workday Pro HCM Reporting Certification Exam exam preparation material. You don't have to go beyond your budget to buy updated Workday Workday-Pro-HCM-Reporting Dumps.
