## CompTIA SecurityX Certification Exam Sample Questions (Q318-Q323):

### NEW QUESTION # 318

An organization would like to increase the effectiveness of its incident response process across its multiplatform environment. A

security engineer needs to implement the improvements using the organization's existing incident response tools. Which of the following should the security engineer use?

- **A. Playbooks**
- B. Event collectors
- C. Endpoint detection
- D. Centralized logging

**Answer: A**

Explanation:

Playbooks standardize and automate incident response steps across a multiplatform environment using existing tools. This increases effectiveness and consistency in handling security incidents.

### NEW QUESTION # 319

Which of the following best explains the business requirement a healthcare provider fulfills by encrypting patient data at rest?

- **A. Protecting privacy while supporting portability**
- B. Providing for non-repudiation of data
- C. Reducing liability from identity theft
- D. Securing data transfer between hospitals

**Answer: A**

Explanation:

Encrypting patient data at rest ensures that sensitive information is protected from unauthorized access, thereby maintaining patient privacy. Additionally, encryption supports data portability by allowing secure transfer and storage of data across different systems and devices without compromising confidentiality. This practice is crucial for healthcare providers to comply with regulations such as the Health Insurance Portability and Accountability Act (HIPAA), which mandates the protection of patient information.

### NEW QUESTION # 320

After several companies in the financial industry were affected by a similar incident, they shared information about threat intelligence and the malware used for exploitation. Which of the following should the companies do to best indicate whether the attacks are being conducted by the same actor?

- A. Leverage malware detonation.
- B. Look for common IOCs.
- C. Use IOC extractions.
- **D. Apply code stylometry.**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation:

Determining if attacks are from the same actor requires unique attribution. Let's analyze:

\* A. Code stylometry: Analyzes coding style to identify authorship, the best method for linking malware to a specific actor per CAS-005's threat intelligence focus.

\* B. Common IOCs: Indicates similar attacks but not necessarily the same actor.

\* C. IOC extractions: Similar to B, lacks specificity for attribution.

### NEW QUESTION # 321

Protected company data was recently exfiltrated. The SOC did not find any indication of a network or outside physical intrusion, and the DLP systems reported no unusual activity. The incident response team determined a text file was encrypted and reviews the following:

```

Which of the following is the most appropriate action for the team to take?

- A. Review the email security settings for proper configurations.
- B. Scan attachments with a third-party virus scan to independently confirm the results.
- **C. Investigate whether the employee had access to the data that was leaked.**
- D. Analyze the hardware for undetected supply chain vulnerabilities that may have been exploited.

**Answer: C**

Explanation:

Since the exfiltration occurred via an encrypted text file sent by an internal account and no external intrusion or DLP alerts were found, the most appropriate next step is to investigate whether the employee legitimately had access to the leaked data. This helps determine if it was an insider threat or misuse of authorized access.

#### NEW QUESTION # 322

An organization plans to deploy new software. The project manager compiles a list of roles that will be involved in different phases of the deployment life cycle. Which of the following should the project manager use to track these roles?

- **A. RACI matrix**
- B. Recall tree
- C. ITIL
- D. CMDB

**Answer: A**

Explanation:

\* RACI matrix(Responsible, Accountable, Consulted, Informed) is used for role mapping across the project lifecycle.

\* CMDB is a configuration inventory; ITIL is a framework. Recall trees are for disaster recovery /business continuity.

\* From CAS-005, Domain 1: Security Governance and Compliance:

\* "The RACI matrix is essential in role assignment and accountability for software development and operational processes."
