

010-160 Reliable Test Guide & 010-160 Exam Cost

010-160

LPI Linux Essentials

STEP BY STEP GUIDE

STEP 1 - EXAM OBJECTIVES

LPI provides candidates Exam 010 Objectives covering a detailed overview of the objectives of the exam. This will help you get familiar with the exam pattern, and get an insight into the exam.

STEP 2 - STUDY RESOURCE

Linux Essential Version 1.6

It is created by subject experts with the aim to train the candidates to achieve excellence in Linux Administration and earn their certification.

STEP 3 - TRAINING PARTNERS

1. LPI Approved Training Partner (LPI-ATP)
2. LPI Approved Academic Partner (LPI-AAP) Programs

STEP 4 - ONLINE COMMUNITY

Forums work really well to build a community that is essential for understanding others.

STEP 5 - PRACTICE TESTS

Taking a practice test is a great way to diversify your study strategy and ensure the best possible results for the real thing.

010-160 Exam Cost & 010-160 Valid Practice Questions

We take so much pride in the high pass rate of our 010-160 study questions because according to the statistics from the feedbacks of all of our customers, under the guidance of our 010-160 exam materials the pass rate has reached as high as 98% to 100%, which marks the highest pass rate in the field. So if you really want to pass the 010-160 Exam as well as getting the certification with no danger of anything going wrong, just feel rest assured to buy our 010-160 learning guide.

The Linux Essentials Certificate is an entry-level certification that is ideal for individuals who are just starting their careers in the IT industry. It is also a great way for IT professionals who are new to Linux to gain an understanding of the operating system and its basic concepts. Linux Essentials Certificate Exam - version 1.6 certification is recognized by a range of employers and organizations, and it can help individuals to stand out in a crowded job market.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q46-Q51):

NEW QUESTION # 46

What is true about links in a Linux file system?

- A. When the target of the symbolic link is moved, the link is automatically updated.
- **B. A symbolic link can point to a file on another file system.**
- C. A symbolic link can only point to a file and not to a directory.
- D. A hard link can only point to a directory and never to a file.
- E. Only the root user can create hard links.

Answer: B

Explanation:

Explanation

A symbolic link, also known as a symlink or soft link, is a special type of file that points to another file or directory by its name. A symbolic link can point to a file or directory on the same or different file system, as long as the target is accessible. For example, you can create a symbolic link to a file on a USB drive or a network share, as long as the device is mounted or the connection is established. However, if the target of the symbolic link is moved, renamed, or deleted, the link becomes broken and does not work. To create a symbolic link, you can use the `ln` command with the `-s` or `--symbolic` option, followed by the target name and the link name. For example, `ln -s /mnt/usb/file.txt link.txt` creates a symbolic link named `link.txt` that points to the `file.txt` on the USB drive mounted at `/mnt/usb`.

The other options are not true about links in a Linux file system. A symbolic link can point to a directory as well as a file. A hard link, which is a direct reference to the same data as another file, can only point to a file and not a directory. A hard link cannot span across different file systems, because it depends on the inode number, which is unique within a file system. When the target of the symbolic link is moved, the link is not automatically updated, but becomes broken. Any user can create hard links, as long as they have the permission to read and write the target file and the link directory.

NEW QUESTION # 47

Which of the following directories must be mounted with read and write access if it resides on its own dedicated file system?

- A. /opt
- **B. /var**
- C. /lib
- D. /etc
- E. /usr

Answer: B

NEW QUESTION # 48

What are the differences between hard disk drives and solid state disks? (Choose two correct answers.)

- A. Hard disks can fail due to physical damage, while solid state disks cannot fail.
- B. Solid state disks can store many times as much data as hard disk drives.
- **C. Hard disks have a motor and moving parts, solid state disks do not.**
- **D. Solid state disks provide faster access to stored data than hard disks.**
- E. /dev/sdais a hard disk device while /dev/ssdais a solid state disk.

Answer: C,D

Explanation:

Explanation

The main difference between hard disk drives (HDDs) and solid state drives (SSDs) is the way they store and access data. HDDs use a spinning disk (platter) and a moving head to read and write data, while SSDs use flash memory chips that have no moving parts. This makes SSDs faster, quieter, and more durable than HDDs, but also more expensive and less spacious. HDDs and SSDs are both I/O devices that can be used to boot the system and store data, but they have different advantages and disadvantages depending on the use case.

NEW QUESTION # 49

What is the preferred source for the installation of new applications in a Linux based operating system?

- A. The vendor's version management system
- B. A retail store
- C. A CD-ROM disk
- **D. The distribution's package repository**
- E. The vendor's website

Answer: D

Explanation:

Explanation

The distribution's package repository is the preferred source for the installation of new applications in a Linux based operating system. A package repository is a collection of software packages that are maintained by the distribution and can be easily installed,

updated, or removed using a package manager. Package repositories offer several advantages, such as:

- * They ensure compatibility and stability with the system and other packages.
- * They provide security updates and bug fixes for the packages.
- * They reduce the risk of malware or corrupted files.
- * They simplify the dependency management and configuration of the packages.

The other sources are not preferred because they may not offer these benefits and may cause problems with the system. The vendor's version management system, the vendor's website, or a CD-ROM disk may contain packages that are not compatible with the distribution or may conflict with other packages. A retail store may not have the latest or the most suitable packages for the system. References:

NEW QUESTION # 50

Which of the following directories contains information, documentation and example configuration files for installed software packages?

- A. [/usr/share/doc/](#)
- B. [/doc/](#)
- C. [/etc/defaults/](#)
- D. [/var/info/](#)
- E. [/usr/examples/](#)

Answer: A
