Our certification 100-160 guide materials are collected and compiled by experience experts who have worked in this line more than 10 years.

### Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q238-Q243):

#### NEW QUESTION # 238

Which component of network security architecture is designed to separate the internal network from the external network?

- A. DMZ
- B. Virtualization
- C. Cloud
- D. Proxy

**Answer: A**

Explanation:

A DMZ, or demilitarized zone, is a network segment that is used to separate the internal network from the external network. It acts as a buffer zone between the organization's network and the internet, providing an additional layer of security. By placing servers, such as web servers or email servers, in the DMZ, organizations can ensure that external traffic is filtered and scrutinized before reaching the internal network.

#### NEW QUESTION # 239

Which of the following is an example of a natural disaster?

- A. Malware attack
- B. Data breach
- C. Server failure
- D. Power outage

**Answer: D**

Explanation:

A power outage is considered a natural disaster because it is caused by factors beyond human control, such as severe weather conditions or infrastructure failures. It can disrupt normal operations and impact the availability of systems and resources.

#### NEW QUESTION # 240

Which level of risk category would be associated with a vulnerability that has the potential to cause minor financial loss or impact?

- A. Extremely high risk
- B. Low risk
- C. High risk
- D. Medium risk

**Answer: B**

Explanation:

A vulnerability that has the potential to cause minor financial loss or impact would be categorized as a low-risk level. Low-risk vulnerabilities pose a relatively smaller threat to an organization's assets, systems, or data. While they should not be ignored, low-risk vulnerabilities typically require less immediate attention and resources to mitigate.

### NEW QUESTION # 241

What is the primary reason for implementing multi-factor authentication in a cloud environment?

- A. To simplify the authentication process
- **B. To provide an additional layer of security**
- C. To improve performance
- D. To reduce costs

**Answer: B**

Explanation:

Option 1: Correct. Implementing multi-factor authentication provides an additional layer of security by requiring users to provide multiple forms of authentication to access cloud resources.

Option 2: Incorrect. The primary reason for implementing multi-factor authentication is to provide an additional layer of security, not to simplify the authentication process.

Option 3: Incorrect. The primary reason for implementing multi-factor authentication is to provide an additional layer of security, not to reduce costs.

Option 4: Incorrect. The primary reason for implementing multi-factor authentication is to provide an additional layer of security, not to improve performance.

### NEW QUESTION # 242

Which of the following is an example of a corrective control?

- A. Antivirus software
- **B. Backup and recovery**
- C. Intrusion prevention system
- D. User awareness training

**Answer: B**

Explanation:

Backup and recovery is a corrective control that enables organizations to restore systems, data, and services after an incident or a failure. It helps to recover from various incidents such as data loss, hardware failure, or a security breach, restoring operations to a functional state.

### NEW QUESTION # 243

.....
