Tableau SCA-C01 Certification is useful for professionals who are looking to enhance their skills in managing and administering Tableau Server. It is particularly relevant for IT professionals who are responsible for installing and configuring Tableau Server in their organization. It is also beneficial for business analysts, data scientists, and other professionals who work with Tableau Server on a regular basis.

## Tableau Server Certified Associate Exam Sample Questions (Q159-Q164):

### NEW QUESTION # 159

Which tsm configuration set option controls whether Tableau Server collects historical user activity and other information in the repository?

- A. auditing.activated
- **B. auditing.enabled**
- C. lineage.activated
- D. lineage.enabled

**Answer: B**

Explanation:

Explanation

#### NEW QUESTION # 162

To help your users find the data that's trusted and recommended for their type of analysis, you can certify the data that complies with your organization's data standards. Which site roles have the capability to certify data in Tableau Server? (Select all)

- A. Explorer (Can Publish) site role and the Project Leader capability
- B. Creator site role
- C. Creator site role and the Project Leader capability
- D. Server Administrator

**Answer: A,C,D**

Explanation:

Explanation

Link to Tableau Server documentation:

[https://help.tableau.com/current/server/en-us/datasource\\_certified.htm](https://help.tableau.com/current/server/en-us/datasource_certified.htm)

#### NEW QUESTION # 163

Which three types of authentications can be used with user-based licensing? (Choose three.)

- A. Local authentication
- B. Trusted authentication
- C. Reliance authentication
- D. Active Directory

**Answer: A,B,D**

Explanation:

Tableau Server's user-based licensing (Creator, Explorer, Viewer) ties licenses to individual users-let's determine compatible authentication methods:

\* User-Based Licensing:

\* Licenses are assigned per user, tracked by username.

\* Authentication determines how users log in-must integrate with licensing.

\* Option A (Local authentication): Correct.

\* Details: Users are managed in Tableau Server's internal database-username/password set manually or via import.

\* Why: Directly ties to user accounts, fully compatible with licensing.

\* Option C (Trusted authentication): Correct.

\* Details: Allows external apps to authenticate users via tickets (e.g., /trusted/<ticket>).

\* Why: Maps to Tableau usernames, integrating with licensing-common for embedded analytics.

\* Config: Trusted IPs or credentials set in TSM.

\* Option D (Active Directory): Correct.

\* Details: Uses AD for authentication (LDAP or Kerberos)-users sync to Tableau Server.

\* Why: AD usernames align with licensing-supports SSO and user management.

\* Config: Enable via tsm authentication active-directory configure.

\* Option B (Reliance authentication): Incorrect.

\* Why: Not a recognized Tableau authentication method-likely a typo (e.g., for "Resilience" or misheard term). No such feature exists.

Why This Matters: Authentication flexibility ensures user-based licensing fits diverse IT environments- critical for adoption.

#### NEW QUESTION # 164

.....

The staffs of our SCA-C01 training materials are all professionally trained. If you have encountered some problems in using our products, you can always seek our help.
