Passing C_SEC_2405 Certification Exam is not an easy task? Choosing TorrentValid C_SEC_2405 exam training materials, passing C_SEC_2405 exam is quite possible. TorrentValid's C_SEC_2405 exam training materials is the highly certified IT professionals' collection of experience and innovation results in this field, and have absolute authority. You won't regret to choose TorrentValid.

SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.
Topic 2	<ul style="list-style-type: none"> Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 3	<ul style="list-style-type: none"> Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Topic 4	<ul style="list-style-type: none"> User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Topic 5	<ul style="list-style-type: none"> SAP Fiori Authorizations and SAP S 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.

SAP Certified Associate - Security Administrator Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which of the following is part of the SAP S/4HANA central UI component?

- A. SAP Fiori transactional application
- B. SAP Fiori launchpad**
- C. SAP Fiori object page
- D. SAP Fiori analytical application

Answer: B

Explanation:

The SAP Fiori launchpad is the central UI component in SAP S/4HANA, serving as the primary entry point for users to access Fiori applications. It provides a unified, role-based interface where users can navigate to transactional, analytical, or object page applications via tiles organized in catalogs and spaces. The launchpad integrates with the SAP Fiori infrastructure, ensuring consistent user experience and secure access to applications. SAP Fiori object pages, transactional applications, and analytical applications are specific types of Fiori apps accessed through the launchpad, not central UI components themselves. The launchpad's role as the central hub supports personalized navigation, single sign-on, and application management, making it a cornerstone of the S/4HANA user interface. By centralizing access, the Fiori launchpad enhances usability and security, ensuring that users only interact with applications authorized by their roles, aligning with SAP's modern, user-centric design philosophy for enterprise systems.

NEW QUESTION # 53

You are building a PFCG role for access to an SAP Fiori app on your SAP S/4HANA on-premise system.

After you enter the catalog in the role menu, an entry for an OData service is missing and you have to add it manually to the role menu. When you maintain authorization data in the PFCG role, why does SAP recommend that you NOT maintain the SRV_NAME field value of the S_SERVICE authorization object manually?

- A. Because the TADIR Service name is the same for the front-end server component and the back-end server component.
- B. Because the SRV_NAME hash value for the front-end server component and back-end server component are different.
- C. Because the TADIR Service name for the back-end server component was automatically added to the role menu.**
- D. Because the SRV_NAME hash value for the front-end server component and back-end server component are the same.

Answer: C

Explanation:

When building a PFCG role for an SAP Fiori app in an SAP S/4HANA on-premise system, SAP recommends not manually maintaining the SRV_NAME field value of the S_SERVICE authorization object because the TADIR Service name for the back-end server component is automatically added to the role menu when the catalog is included. The S_SERVICE authorization object is used to control access to OData services, and its SRV_NAME field contains a hash value specific to the service. When a catalog is added to the PFCG role, the system automatically populates the necessary OData service entries, including the TADIR Service name, in the role menu, ensuring consistency between front-end and back-end components. Manually maintaining the SRV_NAME field risks introducing errors, as the hash values are system-generated and complex. The front-end and back-end SRV_NAME hash values are typically different, ruling out options A and D, and option C is irrelevant to the automatic addition process. This automation simplifies role maintenance and ensures accurate authorization assignments for Fiori apps.

NEW QUESTION # 54

Which authorization objects can be used to restrict access to SAP Enterprise Search models in the SAP Fiori launchpad? Note: There are 2 correct answers to this question.

- A. RSDDLIP
- B. SDDLVIEW
- C. S_ESH_CONN
- D. S_ESH_ADMIN

Answer: C,D**NEW QUESTION # 55**

In SAP HANA Cloud, who has access to a database object?

- A. The creator and the schema owner
- B. The owner and the SAP-owned users
- C. The user SYSTEM and the creator
- D. The user DBADMIN and the group owner

Answer: A

Explanation:

* Context: In SAP HANA Cloud, database object access is determined by the object's ownership.

* Solution Explanation:

* Creator: The user who creates the object is assigned ownership.

* Schema Owner: The schema owner also has access to the object, as objects reside within a schema.

SAP Security References:

* SAP HANA Cloud Security Documentation

* SAP Help Portal on Database Object Ownership

NEW QUESTION # 56

Which of the following services does the Identity Authentication Service provide? Note: There are 2 correct answers to this question.

- A. Single Sign-On
- B. Authentication
- C. Central User Repository
- D. Policy refinement

Answer: A,B

Explanation:

The SAP Identity Authentication Service provides Authentication and Single Sign-On (SSO) services.

Authentication verifies user identities by validating credentials, such as usernames and passwords, or integrating with external identity providers, ensuring secure access to SAP cloud applications. Single Sign-On enables users to access multiple SAP and non-SAP

systems with a single set of credentials, streamlining user experience and reducing authentication overhead while maintaining security. These services are core to the Identity Authentication Service's role in SAP's cloud ecosystem, supporting secure and efficient access management. Policy refinement is not a function of this service, as it focuses on policy enforcement rather than creation. A Central User Repository is typically managed by other systems, like SAP Cloud Identity Services, not the Identity Authentication Service. By offering Authentication and SSO, the service ensures robust identity verification and seamless access across cloud-based SAP solutions, aligning with modern security standards and enhancing user productivity.
